**Question: 1**

Refer to the exhibit to answer the question.

YourCo is a marketplace that connects buyers and sellers online for various trading communities. The marketplace operates as follows:

1. Using YourCo marketplace, companies can quickly search and locate products and services online.
2. Once a company finds a product or service suitable for their need, the company can solicit pricing information (quotations) from various sellers.
3. Multiple sellers of a same kind product or service can bid to sell a product.
4. Once the company finalizes the desired product(s), price and seller, it notifies the seller and the seller sends an invoice to the customer.
5. The marketplace interacts with banks on behalf of the sellers and buyers to execute the financial transactions of an exchange.

XML will be used extensively for data exchange between heterogeneous entities.

Buyer entities of the marketplace can search and discover sellers and interact with them. The discovery and interaction processes are very dynamic in nature. Which of the following can MOST logically be part of the application's architecture?

- A - Validation of XML data
- B - XSL matching for the search and discovery
- C - XML Query for the search and discovery
- D - UDDI for the search and discovery
- E - SOAP for communication between various entities

**Answer: A, D, E**

**Question: 2**

An application needs to be able to modify the XML document that it is processing<sup>1</sup> without creating a new instance of the document. Which is the BEST technology to use?

- A - XSLT
- B - SAX
- C - DOM
- D - DTD
- E - Infoset

**Answer: C**

**Question: 3**

A group of companies that currently processes purchase orders (POs) using XML has set up a B2B trading community in order to exchange the POs. Which of the following XML technologies would provide the MOST benefits?

- A - Use published DTD5 to standardize the P0 format.

- B - Use XML Query to retrieve POs from another company's database.
- C - Use XML Infoset to standardize field names between companies.
- D - Use XSLT to transform POs to/from internal PO formats.

**Answer: A, D**

- A - The application is being developed but not during production, when performance is more important
- B - The source of the XML data is untrusted
- C - Validating stylesheets are used
- D - High performance is an important architectural constraint

**Answer: B**

**Question: 6**

Refer to the exhibit to answer the question.

The Web site for a financial services company will include both web-based trading (e-trades) and the financial research reports to help investors make their decisions. As part of the application architecture, note the following:

- \* As the data interchange format between the web-based application and the company's legacy trading systems.
- \* As the EFT (Electronic Funds Transfer) data interchange format with the customer's bank, from which funds will be withdrawn to settle the trade.
- \* As the source format for the financial research reports, which will be searchable and displayable from the web browser.
- \* The set of banks is unknown at the time the application is being built.

It is very important to management that the Web site looks professional, that customers have pleasant interaction, and that the site has performance characteristics. Additionally, management wants to ensure that financial reports can still be produced on paper with high-quality typesetting and four-color printing.

Which of the following is MOST likely to be required in the design?
