000-546

IBM

DB2 9.7 Database Administrator for Linux UNIX or Windows Upgrade

<http://www.ipass4sure.com/exams.asp?examcode=000-546>

The 000-546 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-546 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-546 exam is very challenging, but with our 000-546 questions and answers practice exam, you can feel confident in obtaining your success on the 000-546 exam on your FIRST TRY!

IBM 000-546 Exam Features

- Detailed questions and answers for 000-546 exam
- Try a demo before buying any IBM exam
- 000-546 questions and answers, updated regularly
- Verified 000-546 answers by Experts and bear almost 100% accuracy
- 000-546 tested and verified before publishing
- 000-546 examcollection vce questions with exhibits
- 000-546 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-546 exam are now continuously updating and accepting this challenge is itself a task. This 000-546 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-546 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-546 Test and save time and money while developing your skills to pass your IBM 000-546 Exam? Let us help you climb that ladder of success and pass your 000-546 now!

QUESTION: 1

Click on the Exhibit button

```
<company name="Company1">
  <emp id="31201" salary="60000" gender="Male">
    <name>
      <first>John</first>
      <last>Doe</last>
    </name>
    <dept id="M25">
      Finance
    </dept>
  </emp>
</company>
```

Given the following DDL statements:

```
CREATE TABLE tab1
  (col1 INTEGER NOT NULL,
   col2 XML)
INDEX IN index_ts
PARTITION BY RANGE (col1)
(STARTING FROM 1 INCLUSIVE ENDING AT 100 INCLUSIVE
 IN tbasp11 INDEX IN tbasp21,
 STARTING FROM 101 INCLUSIVE ENDING AT 200 INCLUSIVE
 IN tbasp12 INDEX IN tbasp22);

CREATE INDEX xml_index ON tab1 (col1, col2)
GENERATE KEY USING XMLPATTERN '/company/emp/@id'
AS SQL DOUBLE;
```

If COL2 contains XML documents similar to the one shown in the scenario, what is the end result of the CREATE INDEX statement?

- A. An error will be returned because it is not possible to create an index for an XML column like COL2.
- B. TBSP11 and TBSP12 will each contain one local index for XML_INDEX since the local indexes will physically reside in the same table space as the related data.
- C. An error will be returned because it is not possible to include more than one column as part of the CREATE INDEX statement when one of the columns is of type XML.
- D. A non-partitioned index will be created in table space TBSP21 since the INDEX IN clause of the table definition is ignored and XML_INDEX will automatically be created within the first index partition listed in the create table statement.

Answer: C

QUESTION: 2

When storing XML data in a DB2 database, which statement is valid?

- A. A table with an XML column can be defined in a non-Unicode database.
- B. A table with an XML column can only be defined in a Unicode database.
- C. A table with an XML column can be defined in a non-Unicode database but the table containing the XML column will be stored in Unicode.
- D. A table with an XML column can be defined in a non-Unicode database but the database must be converted to Unicode before the XML columns can be used.

Answer: A

QUESTION: 3

If table TAB_A is created as follows:

```
CREATE TABLE tab_a (c1 INT NOT NULL,
                    c2 CHAR(30),
                    c3 CLOB(75000),
                    c4 INT,
                    c5 VARCHAR(5))
COMPRESS YES
```

Assuming the cardinality of the columns is the same, which statement will create an index that will benefit the most from compression?

- A. CREATE INDEX taba_idx ON tab_a (c2)
- B. CREATE INDEX taba_idx ON tab_a (c4)
- C. ALTER TABLE tab_a ADD PRIMARY KEY (c1)
- D. CREATE UNIQUE INDEX taba_idx ON tab_a (c2)

Answer: A

QUESTION: 4

Which of following is true when decomposing multiple XML documents?

- A. It is possible to decompose multiple XML documents stored in a binary column or in an XML column.
- B. It is not possible to decompose multiple XML documents stored in a binary column or in an XML column.
- C. It is possible to decompose multiple XML documents stored in a binary column but not in an XML column.
- D. It is possible to decompose multiple XML documents stored in a XML column but not in a binary column.

Answer: A

QUESTION: 5

If table TAB_A has just been created as follows:

```
CREATE TABLE tab_a (c1 INT,  
                    c2 CHAR(30),  
                    c3 CLOB(75000))  
COMPRESSION YES
```

Which command will create a compression dictionary for table TAB_A?

- A. DELETE FROM tab_a
- B. REORG TABLE tab_a
- C. UPDATE tab_a SET c1 = c1*1.1
- D. LOAD FROM data.del OF DEL INSERT INTO tab_a

Answer: D

QUESTION: 6

Which is true regarding collecting distribution statistics for XML data?

- A. XML distribution statistics are collected for indexes over XML data of type VARCHAR.
- B. XML distribution statistics are collected for indexes over XML data of type VARCHAR HASHED.
- C. XML distribution statistics are collected when collecting index statistics during index creation.
- D. XML distribution statistics are collected for partitioned indexes over XML data defined on a data partitioned table.

Answer: A

QUESTION: 7

Table TAB_A and index TABA_IDX were created by executing these SQL statements:

```
CREATE TABLE tab_a (c1 INT,
                    c2 CHAR(30),
                    c3 XML)
COMPRESS YES;
CREATE INDEX taba_idx ON tab_a (c1) COMPRESS YES;
```

If this SQL statement is executed after 100,000 records have been inserted into table TAB_A:

```
ALTER INDEX taba_idx COMPRESS NO;
```

Which statement correctly describes what will happen to index TABA_IDX?

- A. The index will be uncompressed immediately.
- B. The index will remain compressed until it is REORGed.
- C. The index will remain compressed until the COMPRESS attribute for table TAB_A has been set to NO.
- D. The index will remain compressed until the COMPRESS attribute for table TAB_A has been set to NO and both the table and the index have been REORGed.

Answer: B

QUESTION: 8

Index INDEX1 has been created as follows: CREATE INDEX index1 ON table_x (cola)
Which of the following actions can be done through an ALTER INDEX statement?

- A. Add a column to the index key.
- B. Change the PCTFREE specification.
- C. Make the COMPRESS attribute YES or NO.
- D. Make this index the clustering index.

Answer: C

QUESTION: 9

Given the following DDL statements:

```
CREATE TABLE tab1
  (col1 INTEGER NOT NULL,
   col2 INTEGER) INDEX IN index_ts
PARTITION BY RANGE (col1)
  (STARTING FROM 1 INCLUSIVE ENDING AT 100 INCLUSIVE
   IN tbsp11 INDEX IN tbsp21,
   STARTING FROM 101 INCLUSIVE ENDING AT 200 INCLUSIVE
   IN tbsp12 INDEX IN tbsp22);

CREATE INDEX new_idx ON tab1 (col1);
```

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
