000-702

IBM

UDB V8.1 for z/OS Database Administration

The 000-702 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-702 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-702 exam is very challenging, but with our 000-702 questions and answers practice exam, you can feel confident in obtaining your success on the 000-702 exam on your FIRST TRY!

IBM 000-702 Exam Features

- Detailed questions and answers for 000-702 exam
- Try a demo before buying any IBM exam
- 000-702 questions and answers, updated regularly
- Verified 000-702 answers by Experts and bear almost 100% accuracy
- 000-702 tested and verified before publishing
- 000-702 examcollection vce questions with exhibits
- 000-702 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-702 exam are now continuously updating and accepting this challenge is itself a task. This 000-702 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-702 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself.Want to take advantage of the Real 000-702 Test and save time and money while developing your skills to pass your IBM 000-702 Exam? Let us help you climb that ladder of success and pass your 000-702 now!

Question: 1
The following statement is executed:
ALTER RTABLESPACE DB2 CERT. CERTTS LOCKSIZE FREEOAGE 10
Which of the following is the result of the statement?

A. DB2 chooses the lock size and there is one free page after each 10 pages.
B. DB2 chooses the lock size and there is 10percent free space each pages.
C. DB2 chooses the LOCKMAX value and there is 10 percent free space in each page.
D. DB2 chooses the maximum number of locks and there is one free page agter each 10 page

Answer: A

Question: 2
In the PLAN_TABLE for an SQL statement, the ACCESSTYPE is "N" and the METHOD="2".
Given these PLAN_TABLE values, which type of access path is DB2 using to retrieve the data?

A. A table space scan with a sort
B. A non-matching index scan with a sort
C. A two-column match in a nested loop join
D. IN-list index access with merge scan join

Answer: D

Question: 3
Which of the following with happen if the ALTER INDEX NOT CLUSTER statement is used to
remove explicit clustering for a table?

A. The primary key will be used for determining clustering order.
B. The first index created for the table becomes the clustering index.
C. The data will not be in any clustering order until a new clustering index is defined
D. The index will continue to be used as the implicit clustering index until a new explicit clustering
   index is defined.

Answer: D

Question: 4
The following command is issued:
- DIS DB (DBTST1A) SPACE (*) RESTRICT LIMITE (*)
The result of the command shows that TS1 has the status RW, CHKP, COPY.
Which of the following utilities should the DBA execute first to ensure appropriate data integrity
and successful execution in removing the restrictions in a production environment?

A. CHECK DATA
B. COPY TABLESPACE
C. REPAIR NOCOPYPEND
D. REPAIR NOCHECKPEND

Answer: A

Question: 5
Resource class DSNR is used to protect access to DB2 from different environments. Which of the
following profile names in the DSNR resource class could be used to allow access to DB2
subsystem DSN1 from IMS?

A. DSN1.DLI

B. DSN1.IMS
C. DSN1.MASS
D. DSN1.SASS

Answer: C

Question: 6
USER01's primary authorization-id is connected to RACF group (or other external security system group). To give USER01 access to a newly created table, the SELECT privilege should be granted to:-

A. the table owner
B. RACF (or external security system)
C. The package that accesses the table
D. A secondary authorization-id of USER01

Answer: D

Question: 7
What feature is NOT an advantage of utilizing WLM-established address spaces for stored procedures?

A. Stored procedures can run as a SUB program
B. Incoming request for stored procedures are handeled in a first-in first-out order.
C. Stored procedures inherit the z/OS dispatching priority of the DB2 thread that issues the CALL
    statement.
D. Stored procedures can access protected resources with the authority of the creator of the stored
    procedure.

Answer: B

Question: 8
When does multi-row FETCH result in a significant performance benefit?

A. The query is performing an existing check
B. The query uses a table space scan of a partitioned table.
C. The query uses the FETCH FIRST 1 ROW ONLY clause with a table space scan.
D. The query contains a column function, without a GROUP BY clause.

Answer: B

Question: 9
A DBA just added a table check constraint to a table. Which of the following utilities needs to be executed for the table to be usable?

A. CHECK DATA
B. CHECK INDEX
C. CHECK CONSTRAINT
D. INTEGRITY CHECK

Answer: A

Question: 10

The current design of a transaction table has divided the data into 13 partotions. Each partition contains one month of data that partitioned on the transaction date. At the end of the month the data from the oldest month will be discarded. The DBA wants to maintain availability of the partitions and to reuse the old partition for the new month's data. Which of the following monthly jobs would best accomplish the design requirement?

A. Add a new high partition for the new month and drop the oldest partition.
B. Unload the existing data, drop and re-create the table space and reload the data.
C. Alter the table partition and rotate the first partition to be the last partition.
D. Alter the high-key values for each partition and reorganize the table space to redistribute the data.

Answer: C

Question: 11
A table encounters heavy insert processing every night. Although the number of inserts remains unchanged, the time that the insert processing takes increase each night. What should the DBA examine?

A. DB2 log parameters
B. Free space allocation
C. Buffer pool threshold
D. Primary space allocation

Answer: B

Question: 12
When designing a table with row length of 2200 bytes, which of the following is an important factor to consider?

A. Disallowing NULL values in the columns
B. Choosing a large DSSIZE
C. Using a page size larger than 4 kb
D. Using default values in columns to shorten the row

Answer: C

Question: 13
A single index is defined with two columns: COL1 and COL2. Which of the following WHERE clauses is eligible to utilize this index for matching multi-index access?

A. WHERE COL1 = 1 OR COL2 = 'AB'
B. WHERE COL1 IN (1,2,3,4,5)
C. WHERE COL1 = 1 OR COL < > 2 AND COL2 = 'AB')
D. WHERE COL1 = 1 OR (COL1 = 2 AND COL2 < > 'AB')

Answer: D

Question: 14
After applying DB2 maintenance, a static SQL statement no longer performs as it did prior to applying the maintenance. A row currently exist in the plan_table for this SQL statement. Which of the following steps can be performed to re-establish the SQL's previous performance without modifying the original SQL statement?

A. Run EXPLAIN for this SQL statement specifying the use of optimizer hints.

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of Professional & Certified Experts available via support.
- Free 90 days updates to match real exam scenarios.
- Instant Download Access! No Setup required.
- Price as low as $19, which is 80% more cost effective than others.
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (Android, iPhone, iPod, iPad)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- *Guaranteed Success*.
- **Fast**, helpful support 24x7.
