Question: 2
You're implementing a NetWare 6.5 network for a small business client:
Jessica's Bakery. There is only one server in the network. You've named the server BAKERY1
and installed it into an eDirectory tree named JESSICASBAKERY-TREE. You've used a random
password generator to create a password for the tree's Admin user. To ease administration,
you've located the server next to the Point of Sale system in the customer area of the bakery.
You deployed Universal Password on the server. All workstations have Novell Client 4.9 installed
on them. You created a NFAP share on the server for the SHARED and the FINANCE directories
on the server's DATA volume. Does this configuration meet Novell's security recommendations?

A. Yes, all Novell security guidelines have been met.
B. No, the server should be placed in a locked closet or room.
C. No, you shouldn't use Universal Password with Novell Client version 4.9.
D. No, you shouldn't use the business name in the server or eDirectory tree names.
E. No, you shouldn't create NFAP shares for directories containing financial information.
F. No, you shouldn't use a random password generator for the Admin password. It's easy to hack.
