## Oracle

*Oracle Database 10g: New Features for Oracle8i OCPs*

<http://www.ipass4sure.com/exams.asp?examcode=1Z0-045>

The 1Z0-045 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 1Z0-045 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 1Z0-045 exam is very challenging, but with our 1Z0-045 questions and answers practice exam, you can feel confident in obtaining your success on the 1Z0-045 exam on your FIRST TRY!

### Oracle 1Z0-045 Exam Features

- Detailed questions and answers for 1Z0-045 exam
- Try a demo before buying any Oracle exam
- 1Z0-045 questions and answers, updated regularly
- Verified 1Z0-045 answers by Experts and bear almost 100% accuracy
- 1Z0-045 tested and verified before publishing
- 1Z0-045 examcollection vce questions with exhibits
- 1Z0-045 same questions as real exam with multiple choice options

Acquiring Oracle certifications are becoming a huge task in the field of I.T. More over these exams like 1Z0-045 exam are now continuously updating and accepting this challenge is itself a task. This 1Z0-045 test is an important part of Oracle certifications. We have the resources to prepare you for this. The 1Z0-045 exam is essential and core part of Oracle certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 1Z0-045 Test and save time and money while developing your skills to pass your Oracle 1Z0-045 Exam? Let us help you climb that ladder of success and pass your 1Z0-045 now!

**QUESTION 1:**

Which background process does Automatic Shared Memory Management use to coordinate the sizing of memory components?

- A. PMON
- B. SMON
- C. MMNL
- D. MMAN
- E. MMON

Answer: D

The Automatic Shared Memory Management feature uses a new background process named Memory Manager (MMAN). MMAN serves as the SGA Memory Broker and coordinates the sizing of the memory components. The SGA Memory Broker keeps track of the sizes of the components and pending resize operations

REF.: Metalink Note:268197.1: New Background Processes In 10g

---

**QUESTION 2:**

Which six files are maintained in the Flash Recovery Area? (Choose six.)

- A. control file
- B. RMAN files
- C. password file
- D. parameter file
- E. flashback logs
- F. data file copies
- G. core dump files
- H. archived log files
- I. RMAN recovery scripts
- J. control file autobackups

Answer: A, B, E, F, H, J

The Flash Recovery Area is a unified storage location for all recovery-related files and activities in an Oracle Database. It includes Control File, Archived Log Files, Flashback Logs, Control File Autobackups, Data Files, and RMAN files.

---

**QUESTION 3:**

Consider the following scenario:

You have a directory, data, under the disk group tdgroup

- A. You want to create an alias for one of the data files and you execute the following command:  
`ALTER DISKGROUP tdgroupA`

```
ADD ALIAS '+tdgroupA/data/datafile.dbf'  
FOR '+tdgroupA.231.45678';
```

Which task would be accomplished by the command?

- A. The command drops the file +tdgroupA.231.45678
- B. The command physically relocates the file to +tdgroupA/data and renames the file to datafile.dbf.
- C. The command creates a copy of the +tdgroupA.231.45678 file and places it in +tdgroupA/data after remaining the file to datafile.dbf.
- D. The command creates a synonym, datafile.dbf, and places it in +tdgroupA/data and does not remove the +tdgroupA.231.45678 file.
- E. The command creates a file, datafile.dbf, in +tdgroupA/ data and removes the references for +tdgroupA.231.45678 from the data dictionary views.

Answer: D

Alias names (or just "aliases") are intended to provide a more user-friendly means of referring to ASM files, rather than using the system-generated filenames. You can create an alias for a file when you create it in the database, or you can add an alias to an existing file using the ADD ALIAS clause of the ALTER DISKGROUP statement. You can create an alias in any system-generated or user-created ASM directory. You cannot create an alias at the root level (+), however. The following statement adds a new alias name for a system-generated file name:

```
ALTER DISKGROUP dgroup1  
ADD ALIAS '+dgroup1/mydir/second.dbf'  
FOR '+dgroup1/sample/datafile/mytable.342.3';  
REF.: Oracle(r) 10g Administrator Guide, 12-28
```

---

#### QUESTION 4:

Exhibit

One the evening of April 22, you are working on a database created using Oracle Database 10g. This database operates in the ARCHIVELOG mode. You discover that you need crucial data that was dropped from the database at 8:00 a.m. No full backup has been taken after April 15.

What would you do?

- A. recover the database until April 10
- B. recover the database until April 15
- C. recover the database until 22 7:59 a.m.

D. recovery is not possible; manually re-create the object

Answer: C

RMAN simplifies recovery operations using backups taken from earlier database incarnation so that it is easy as recovering a backup from the same incarnation. The simplified recovery through RESETLOGS feature is an enhancement to recovery operations so that previous incarnation backups can be used for recovery of the current database incarnation. You use this feature when you have performed an incomplete recovery (or a recovery using a backup control file) and opened the database with the RESETLOGS option.

To perform incomplete recovery, use the SET UNTIL command to specify the time, SCN, restore point, or log sequence number at which recovery terminates. Alternatively, specify the UNTIL clause on the RESTORE and RECOVER commands.

---

**QUESTION 5:**

You are unable to move the Unified Job Scheduler occupant from the SYSAUX tablespace to the USERS tablespace. What could be the reason?

- A. None of the SYSAUX occupants can be relocated.
- B. The USERS tablespace is a bigfile tablespace (BFT).
- C. The unified Job Scheduler occupant cannot be relocated.
- D. The SYSAUX occupants can be relocated to the SYSTEM tablespace only.

Answer: C

A - Not true. Some of the occupants can be moved

B - Not true. The USERS occupant, isn't, by default a BFT tablespace, and even though, you should be able to move anything to a BFT tablespace. The point it's about to move, SYSAUX occupant.

C - True answer, as you can check, by the following query :

```
SELECT occupant_name, move_procedure,  
FROM v$sysaux_occupants;  
OCCUPANT_NAME MOVE_PROCEDURE
```

```
-----  
AO DBMS_AW.MOVE_AWMETA  
EM emd_maintenance.move_em_tblspc  
JOB_SCHEDULER *** MOVE PROCEDURE NOT APPLICABLE **  
LOGMNR SYS.DBMS_LOGMNR_D.SET_TABLESPACE  
LOGSTDBY SYS.DBMS_LOGSTDBY.SET_TABLESPACE  
ODM MOVE_ODM  
ORDIM *** MOVE PROCEDURE NOT APPLICABLE ***  
ORDIM/PLUGINS *** MOVE PROCEDURE NOT APPLICABLE ***  
ORDIM/SQLMM *** MOVE PROCEDURE NOT APPLICABLE ***  
SDO MDSYS.MOVE_SDO
```

## 1Z0-045

STATSPACK Use export/import (see export parameter file spuexp.par)

STREAMS

TEXT DRI\_MOVE\_CTXSYS

ULTRASEARCH MOVE\_WK

WM DBMS\_WM.move\_proc

D - Not true. Can move SYSAUX occupants, when is possible, to any tablespace that you want.

REF.: Metalink Note: 243246.1: 10G : SYSAUX Tablespace

---

### **QUESTION 6:**

You enabled block change tracking for faster incremental backups in your database.

Which background process writes to the change tracking file?

- A. RBAL
- B. CKPT
- C. SMON
- D. PMON
- E. MMON
- F. CTWR
- G. DBWR

Answer: F

CTWR : This is a new process Change Tracking Writer (CTWR) which works with the new block changed tracking features in 10g for fast RMAN incremental backups.

REF.: Metalink Note:268197.1: New Background Processes In 10g

---

### **QUESTION 7:**

You want to enforce a company's business policy on several objects by using a single policy function.

Which two types of policies can be assigned to the policy\_type argument in the dbms\_rls.add\_policy procedure to achieve the above objective? (Choose two.)

- A. DBMS\_RLS.STATIC
- B. DBMS\_RLS.DYNAMIC
- C. DBMS\_RLS.SHARED\_STATIC
- D. DBMS\_RLS.CONTEXT\_SENSITIVE
- E. DBMS\_RLS.SHARED\_CONTEXT\_SENSITIVE

Answer: C, E

DBMS\_RLS.SHARED\_STATIC

The policy function executes once, Once, then the predicate is cached in the SGA, and it's Shared Across Multiple Objects, like Hosting environments, such as data warehouses where the same predicate must be applied to multiple database objects

DBMS\_RLS.SHARED\_CONTEXT\_SENSITIVE

The policy function executes first time and the object is reference in a database session. Predicates are cached in the private session memory UGA so policy functions can be shared among objects.

REF.: Oracle(r) Database Security Guide 10g Release 2 (10.2) - p 15-30

---

**QUESTION 8:**

The Automatic Database Diagnostic Monitor (ADDM) analysis runs every 60 minutes on your database. Your database is facing a series of interrelated problems over a period of two hours. You need to ensure that the ADDM analysis is run over a time span of two hours in future.

What would you do?

- A. Create two custom ADDM tasks.
- B. Modify the AWR snapshot time interval to two hours.
- C. Create a new scheduler window for a time period of two hours.
- D. Modify the time interval by using the DBMS\_JOB.INTERVAL procedure.
- E. Modify the Automatic Workload Repository (AWR) snapshot retention period to two hours.

Answer: B

The Automatic Database Diagnostic Monitor (ADDM) provides a holistic tuning solution. ADDM analysis can be performed over any time period defined by a pair of AWR snapshots taken on a particular instance. Analysis is performed top down, first identifying symptoms and then refining them to reach the root causes of performance problems.

The goal of the analysis is to reduce a single throughput metric called DB time. DB time is the cumulative time spent by the database server in processing user requests. It includes wait time and CPU time of all non-idle user sessions. DB time is displayed in the V\$SESS\_TIME\_MODEL and V\$SYS\_TIME\_MODEL views.

REF.: Oracle(r) 10g Performance Guide, 6-12

---

**QUESTION 9:**

The database is currently running in the NOARCHIVELOG mode.

What would be the first step to configure Flashback Database?

- A. Enable flashback logging.
- B. Start the database in the ARCHIVELOG mode.
- C. Issue the ALTER DATABASE FLASHBACK ON; command.
- D. Set the FAST\_START\_MTTR\_TARGET initialization parameter.

Answer: B

## Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
