You are modifying the order entry application and want to disable all function keys that have not been explicitly defined. Which trigger can you define to accomplish this?

- A. KEY-OTHERS
- B. KEY-LISTVAL
- C. BACKKEY-FN
- D. KEY-UP

Answer: A

Explanation:

A Key-Others trigger fires when an operator presses the associated key. A Key-Others trigger is associated with all keys that can have key triggers associated with them but are not currently defined by function key triggers (at any level). A Key-Others trigger overrides the default behavior of a Run form function key (unless one of the restrictions apply). When this occurs, however, Form Builder still displays the function key's default entry in the Keys screen.

- C. USER:EXIT
- D. HOST.

Answer: B

Explanation:

FORMS_DDL Issues dynamic SQL statements at runtime, including server side PL/SQL and DDL. All DDL operations issue an implicit COMMIT and will end the current transaction without allowing Form Builder to process any pending changes, as well as losing any locks Form Builder may have acquired.
