1Z0-206

Oracle

Oracle E-Business Suite R12- System Administration

<http://www.ipass4sure.com/exams.asp?examcode=1Z0-206>

The 1Z0-206 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 1Z0-206 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 1Z0-206 exam is very challenging, but with our 1Z0-206 questions and answers practice exam, you can feel confident in obtaining your success on the 1Z0-206 exam on your FIRST TRY!

Oracle 1Z0-206 Exam Features

- Detailed questions and answers for 1Z0-206 exam
- Try a demo before buying any Oracle exam
- 1Z0-206 questions and answers, updated regularly
- Verified 1Z0-206 answers by Experts and bear almost 100% accuracy
- 1Z0-206 tested and verified before publishing
- 1Z0-206 examcollection vce questions with exhibits
- 1Z0-206 same questions as real exam with multiple choice options

Acquiring Oracle certifications are becoming a huge task in the field of I.T. More over these exams like 1Z0-206 exam are now continuously updating and accepting this challenge is itself a task. This 1Z0-206 test is an important part of Oracle certifications. We have the resources to prepare you for this. The 1Z0-206 exam is essential and core part of Oracle certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 1Z0-206 Test and save time and money while developing your skills to pass your Oracle 1Z0-206 Exam? Let us help you climb that ladder of success and pass your 1Z0-206 now!

QUESTION: 1

Which three statements are true about Grants in Oracle Applications? (Choose three.)

- A. Grants that deal with business objects are part of Data Security.
- B. Grants define the access given to users through responsibilities.
- C. Grants that deal with business objects are part of Function Security.
- D. Grant is defined as an approval to perform an operation on an object.
- E. Grants that deal with a set of an application's functionality are part of Data Security.
- F. Grants that deal with a set of an application's functionality are part of FunctionSecurity

Answer: A, D, F

Explanation:

A grant authorizes a particular role to perform a specified action or actions (set of functions) on a specified object instance (or object instance set).

Note that where you are creating a data security policy for an object by creating a grant, you need to include that object in your grant definition. Other than in this specific type of case, you do not need to specify an object in your definition.

QUESTION: 2

Which three statements are true about the background Workflow Engines that are set up as a required component while setting up Oracle Workflow? (Choose three.)

- A. It handles stuck processes.
- B. It handles deferred activities.
- C. It handles timed outnotifications.
- D. It cleans up the WF_CONTROLqueue.
- E. It handles listeners for local outbound agents.

Answer: A, B, C

Explanation:

A: A background engine must be set up to handle stuck processes. A process is identified as stuck when it has a status of ACTIVE, but cannot progress any further. B: When the Workflow Engine initiates and performs a process, it completes all necessary activities before continuing to the next eligible activity. In some cases, an activity can require a large amount of processing resource or time to complete. Oracle Workflow lets you manage the load on the Workflow Engine by setting up supplemental engines to run these costly activities as background tasks. In these cases, the costly activity is deferred by the Workflow Engine and run later by a background engine. The main Workflow Engine can then continue to the next available activity, which may occur on some other parallel branch of the process. A workflow process can also include a Wait activity, which defers the continuation of a

process until a later time. This type of deferred activity is also completed by a background engine. C:A background engine must also be set up to handle timed out notification activities.

QUESTION: 3

Which three statements are true about the Delegated Administration in R12 Oracle Applications? (Choose three.)

- A. It helps to separate Navigation menus and security functions.
- B. It differs from Role Based Access Control (RBAC) system on the privilege model.
- C. It determines the users, roles, and information that local administrators can manage.
- D. It provides organizations with the ability to assign the required access rights for groups and user accounts.
- E. It could be used to assign selected administrative tasks to local administrators after the roles and role inheritance have been configured.

Answer: C, D, E

Explanation:

Delegated administration is an important feature of the Oracle Identity Management infrastructure. It enables you to store all data for users, groups, and services in a central directory, while distributing the administration of that data to various administrators and end users. It does this in a way that respects the various security requirements in your environment. Oracle Delegated Administration Services is a set of pre-defined, Web-based units for performing directory operations on behalf of a user. It frees directory administrators from the more routine directory management tasks by enabling them to delegate specific functions to other administrators and to end users. It provides most of the functionality that directory-enabled applications require, such as creating a user entry, creating a group entry, searching for entries, and changing user passwords.

QUESTION: 4

One of the integration architects is attempting to standardize the path locations for inbound and outbound feeds for the applications. Currently they are providing the full path name of the file on the file system when they submit the request to load the feeds. They would like to soft code the path of the file name by server to shorten the parameter entry and retune key errors when submitting the interfaces. Currently all of the feeds, both inbound and outbound, are being kept in a single directory. They would like to separate the files into directories by application, and have a separate inbound outbound feed directory. This is a global implementation with middle-tier services strategically placed around the world. North American services are all from the data center in New York. The European services are being

provided from the European data center in England, and the Asia-Pacific services are hosted in a data center in India. The architect's plan is to create two profile options: one for inbound path and one for outbound path. All the utl_file directories used by the integration programs would be standardized for use. His plan is to set them at the application and server level to soft code the directory path for all of the integration points. He would also like to provide users with the ability to change the path for their user, or for a development-centric responsibility only to support individual testing efforts on non-production servers. He would also prefer to prevent anyone from setting the value of the profile option at the operating unit level. Identify the flaw in the architect's proposed solution.

- A. Interfaces do not run under a specific responsibility.
- B. Profile options cannot be controlled by the operating unit.
- C. A profile option can only be assigned to one hierarchy type.
- D. The value of the profile option cannot be controlled by the server.
- E. The interfaces would not be able to read the value of the profile option at the server level

Answer: C

Explanation:

Note:

A profile option can be set at one or more levels, depending on its hierarchy type. Most profile options use the Security hierarchy type, meaning that they can potentially be set at the four levels: Site (lowest level) , Application, Responsibility, and User (highest level).

Hierarchy types enable system administrators to group and set profile options according to their business needs or the needs of the installation. There are several hierarchy types: Security, Organization, Server, and Server+Responsibility.

QUESTION: 5

Which two steps are included in the procedure for defining a value set? (Choose two.)

- A. defining a list of values if appropriate
- B. using existing value sets when possible
- C. defining flexfield segments and structures
- D. defining security and cross-validation rules

Answer: A, C

Explanation:

Before defining your values and value sets, perform the following prerequisite steps: * Plan your flexfield structures and segments. * Thoroughly plan your values and value sets. Note:

Oracle Application Object Library uses values, value sets and validation tables as important components of key flexfields, descriptive flexfields, and Standard Request Submission. When you first define your flexfields, you choose how many segments you want to use and what order you want them to appear. You also choose how you want to validate each of your segments. The decisions you make affect how you define your value sets and your values. You define your value sets first, either before or while you define your flexfield segment structures. You typically define your individual values only after your flexfield has been completely defined (and frozen and compiled). (C) Depending on what type of value set you use, you may not need to predefine individual values at all before you can use your flexfield. You can share value sets among segments in different flexfields, segments in different structures of the same flexfield, and even segments within the same flexfield structure. You can share value sets across key and descriptive flexfields. You can also use value sets for report parameters for your reports that use the Standard Request Submission feature.

QUESTION: 6

Your company is using Oracle Application Manager (OAM). Your manager asked you to set up an alert, which should trigger whenever "Forms Runaway Processes" on the system. Which are the three thresholds that you need to configure, so that whenever a form session exceeds these thresholds, the system would post an alert? (Choose three.)

- A. maximum duration
- B. maximum CPU percent
- C. maximum memory size
- D. maximum number of users
- E. maximum number of transactions
- F. maximum number of form sessions

Answer: A, B, C

Explanation:

Forms Runaway Processes Navigation: Site Map > Monitoring (subtab) > Current Activity (heading) > Forms Runaway Processes (link) Overview Running Oracle E-Business Suite requires the creation of many system-level processes. On occasion, processes can behave incorrectly and have a negative impact on system performance. In Oracle Applications Manager, you can configure thresholds (maximum memory size (c), maximum CPU percent (B), maximum duration in minutes (A)) for tracking runaway processes. These settings take immediate effect as soon as you click Apply. These settings are used to raise system alerts on the Applications Dashboard.

QUESTION: 7

The Receivable Super User responsibility is based on the Receivable Super menu. A custom function "Receivables Summary" is added to the Receivable Super menu. Assume that if the user is in the Receivable Super User responsibility, the user has to that possibility to Receivable Super User. When is the function available to the user?

- A. Immediately after the system cache is refreshed
- B. Immediately after saving the function in the menu window
- C. Immediately after entering the function row in the menu window
- D. Immediately after the successful completion of the compile security program

Answer: D

Explanation:

The security program must compile successfully.

QUESTION: 8

Identify the profile options belonging to the Flexfields, profile category that controls the behavior of Flexfield processing. (Choose all that apply.)

- A. Activate
- B. Autoskip
- C. PositiveFormat
- D. ShorthandEntry
- E. Validate on Server
- F. LOV WarningLimit

Answer: D, E

Explanation:

D: Shorthand Flexfield Entry is enabled and the Flexfields:Shorthand Entry profile option is set to an appropriate value, the shorthand window allows you to enter an alias before the flexfield window opens. The combination or partial combination you defined for your alias is entered into your flexfield window. E: If you are using flexfields server-side validation, you cannot use form field references (:block.field). You must either remove your field references or turn off flexfields server-side validation using the profile option Flexfields:Validate on Server.

QUESTION: 9

Which statement most accurately reflects how the list of concurrent programs displayed in standard report submission is compiled?

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
