Questions: 3

You have bound your system to the Network Information Service (NIS) domain ORACLE and all client-side configurations are done. The users report a problem that they are not able to log in through NIS accounts, whereas local users are successfully authenticated, after the system reboots.

As a Linux administrator, you executed the nisdomainname command and you get the output "(none)", and no traces of yp are found in the /var/log/messages file.

What would you do to resolve this error? (Choose all that apply.)

- A. Re-create the NIS domain on the server that runs the NIS domain ORACLE.
- B. Restart the ypserv service on the server that runs the NIS domain ORACLE.
- C. Restart the network service on the server that runs the NIS domain ORACLE.
- D. Use the chkconfig command to set the ybind service to be on at the desired runlevels.
- E. Use the ntsysv command to select the ybind service to be automatically started with the desired runlevels.
