1Z0-547

Oracle

Sun Storage 7000 Unified Storage Systems Essentials

The 1Z0-547 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 1Z0-547 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 1Z0-547 exam is very challenging, but with our 1Z0-547 questions and answers practice exam, you can feel confident in obtaining your success on the 1Z0-547 exam on your FIRST TRY!

Oracle 1Z0-547 Exam Features

- Detailed questions and answers for 1Z0-547 exam
- Try a demo before buying any Oracle exam
- 1Z0-547 questions and answers, updated regularly
- Verified 1Z0-547 answers by Experts and bear almost 100% accuracy
- 1Z0-547 tested and verified before publishing
- 1Z0-547 examcollection vce questions with exhibits
- 1Z0-547 same questions as real exam with multiple choice options

Acquiring Oracle certifications are becoming a huge task in the field of I.T. More over these exams like 1Z0-547 exam are now continuously updating and accepting this challenge is itself a task. This 1Z0-547 test is an important part of Oracle certifications. We have the resources to prepare you for this. The 1Z0-547 exam is essential and core part of Oracle certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 1Z0-547 Test and save time and money while developing your skills to pass your Oracle 1Z0-547 Exam? Let us help you climb that ladder of success and pass your 1Z0-547 now!

QUESTION: 1

What does the term "outlier elimination" that is used in the 7000-series system mean?

- A. Truncating chronological data
- B. Removing inactive client sessions
- C. Throttling throughput with busy clients
- D. Blocking errant processes
- E. Cropping the highest data points from view

Answer: E

Explanation:

Vertical outlier elimination. Without this, the y-axis would always be compressed to include the highest event. Click the crop outliers icon to toggle between different percentages of outlier elimination. Mouse over this icon to see the current value.

QUESTION: 2

Which three items are available via the Status Dashboard in the Browser User Interface (BUI)?

- A. Summary of storage pool and main memory usage
- B. Known hardware faults
- C. Status of each physical network port
- D. Status of services on the appliance

Answer: A, B, D

Explanation:

The Status > Dashboard screen provides a view of storage(A), memory(A), services(D), hardware, activity, and recent alerts.

B: Hardware

This area of the Dashboard shows an overview of hardware on the appliance. Faults If there is a known fault, the amber fault icon appears.

D: Services

This area of the Dashboard shows the status of services on the appliance, with a light icon to show the state of each service.

QUESTION: 3

Which three statements are true?

- A. One share can have multiple protocol access to its data
- B. The identity mapping feature can manage Windows and UNIX user Identities simultaneously on the same share.
- C. All shares within one project can share common settings.
- D. Snapshot and Replication can be done at the share level only.
- E. One of the share properties that protects the share against accidental deletion of the share is “read only.”

Answer: A, C, E

Explanation:

A: A share is a ZFS filesystem shared using data protocols. C: Shares can be grouped into projects for common administrative purposes, including space management and common settings. A project defines a common administrative control point for managing shares. All shares within a project can share common settings, and quotas can be enforced at the project level in addition to the share level. E: Share property Types Read Only: These properties represent statistics about the project and share and cannot be changed. The most common properties of this type are space usage statistics.

QUESTION: 4

Enterprise solid state devices (SSDs) based on NAND technology are a critical component of the 7000-series systems. Which statement is true?

- A. Flash technology completes operations as fast as, or better than, DRAM.
- B. Enterprise SSDs support bad block management, wear leveling, and error correction codes (ECC) for data integrity
- C. Read-optimized SSDs are used in place of NVRAM to host the ZFS Intent Log (ZIL)
- D. Write-based SSDs are used to extend the ZFS cache (L2ARC) for reads and writes

Answer: D

Explanation:

The L2ARC is the 2nd Level Adaptive Replacement Cache, and is an SSD based cache that is accessed before reading from the much slower pool disks.

Reference:

Sun ZFS Storage 7000 System Administration Guide, Cache: L2ARC I/O bytes

QUESTION: 5

Which Command Line Interface (CLI) command provides hardware status details?

- A. Maintenance hardware show
- B. Hardware status is not available through the CLI
- C. Status hardware show
- D. Status dashboard hardware

Answer: A

Explanation:

Hardware status details are available in the CLI under the maintenance hardware section. Use show to list the status of all components. The list command will list available chassis, which can be selected and then viewed using show.

Example:

```
tarpon:> maintenance hardware show
```

Chassis:

```
NAME STATE MANUFACTURER MODEL
chassis-000 0839QCJ01A ok Sun Microsystems, Inc. Sun Storage 7410
cpu-000 CPU 0 ok AMD Quad-Core AMD Op cpu-001 CPU 1 ok AMD Quad-Core

QUESTION: 6

Which three are supported methods for viewing system statistics?

- A. Analytics
- B. Solaris stat tools: iostat(1M), vmstat(1M), and so on
- C. Appliance CLI

- D. Oracle SunPlex Manager
- E. SNMP

Answer: A, C, E

Explanation:

A: Analytics statistics provide incredible appliance observability, showing how the appliance is behaving and how clients on the network are using it. C:

Note: The Sun ZFS Storage Appliance's scripting functionality is implemented by a JavaScript

Language Interpreter build in the appliance CLI layer.

E: The SNMP (Simple Network Management Protocol) service provides two different functions on the appliance:

*Appliance status information can be served by SNMP.

*Alerts can be configured to send SNMP traps

Both SNMP versions 1 and 2c are available when this service is enabled

QUESTION: 7

Log devices are designed to improve the performance of asynchronous write workloads.

- A. True
- B. False

Answer: B

Explanation:

Log devices are used to prevent data loss, not to improve performance. Note: The data on log devices is only used in the event of node failure, so in order to lose data with an unmirrored log device it is necessary for both the device to fail and the node to reboot within a few seconds.

QUESTION: 8

Which two statements regarding thin provisioning are true?

- A. The property for thin provisioned may only be set on a LUN
- B. The property for thin provisioned may be set on a share or LUN
- C. A LUN that is thinly provisioned will only represent to the host the physical amount of space used
- D. A thinly provisioned LUN will represent to the host the defined LUN size, and not the actual physical space used

Answer: A, D

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
