1Z0-804

Oracle

Java SE 7 Programmer II Exam

The 1Z0-804 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 1Z0-804 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 1Z0-804 exam is very challenging, but with our 1Z0-804 questions and answers practice exam, you can feel confident in obtaining your success on the 1Z0-804 exam on your FIRST TRY!

Oracle 1Z0-804 Exam Features

- Detailed questions and answers for 1Z0-804 exam
- Try a demo before buying any Oracle exam
- 1Z0-804 questions and answers, updated regularly
- Verified 1Z0-804 answers by Experts and bear almost 100% accuracy
- 1Z0-804 tested and verified before publishing
- 1Z0-804 examcollection vce questions with exhibits
- 1Z0-804 same questions as real exam with multiple choice options

Acquiring Oracle certifications are becoming a huge task in the field of I.T. More over these exams like 1Z0-804 exam are now continuously updating and accepting this challenge is itself a task. This 1Z0-804 test is an important part of Oracle certifications. We have the resources to prepare you for this. The 1Z0-804 exam is essential and core part of Oracle certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 1Z0-804 Test and save time and money while developing your skills to pass your Oracle 1Z0-804 Exam? Let us help you climb that ladder of success and pass your 1Z0-804 now!

QUESTION: 1

Given the code fragment:

```
DataFormat df;
```

Which statement defines a new Dateformat object that displays the default date format for the UK Locale?

- A. `df = DateFormat.getdatDataInstance (DateFormat.DEFAULT, Locale (UK));`
- B. `df = DateFormat.getdatDataInstance (DateFormat.DEFAULT, UK);`
- C. `df = DateFormat.getdatDataInstance (DateFormat.DEFAULT, Locale.UK);`
- D. `df = new DateFormat.getdatDataInstance (DateFormat.DEFAULT, Locale.UK);`
- E. `df = new DateFormat.getdatDataInstance (DateFormat.DEFAULT, Locale (UK));`

Answer: C

Explanation:

The UK locale is constructed with `Locale.UK`. Example:

To format a date for a different Locale, specify it in the call to `getDateInstance()`.

```
DateFormat df = DateFormat.getDateInstance(DateFormat.LONG, Locale.FRANCE);
```

Note: `getDateInstance(int style, Locale aLocale)`

Gets the date formatter with the given formatting style for the given locale.

Reference:

Class `DateFormat`

QUESTION: 2

Given:

```
public class DoubleThread {
public static void main(String[] args) {
Thread t1 = new Thread() { public void run() { System.out.print("Greeting");
}
};
Thread t2 = new Thread(t1); // Line 9
t2.run();
}
}
```

Which two are true?

- A. A runtime exception is thrown on line 9.
- B. No output is produced. C. Greeting is printed once. D. Greeting is printed twice.
- E. No new threads of execution are started within the main method.
- F. One new thread of execution is started within the main method.
- G. Two new threads of execution are started within the main method.

Answer: C, E

Explanation:

Thread t2 is executed. Execution of T2 starts execution of t1. Greeting is printed during the execution of t1.

QUESTION: 3

Given:

```
import java.util.*;
public class AccessTest {
public static void main(String[] args) {
Thread t1 = new Thread(new WorkerThread()); Thread t2 = new Thread(new
WorkerThread()); t1.start(); t2.start; // line1
}
}
class WorkPool {
static ArrayList<Integer> list = new ArrayList<>(); // line2
public static void addItem() { // line3
list.add(1); // Line4
}
}
class WorkerThread implements Runnable {
static Object bar = new Object ();
public void run() { //line5
for (int i=0; i<5000;i++) WorkPool.addItem(); // line6
}
}
```

Which of the four are valid modifications to synchronize access to the valid list between threads t1 and t2?

- A. Replace line 1 with:
Synchronized (t2) (t1.start();) synchronized(t1) (t2.start();)
- B. Replace Line 2 with:
static CopyWriteArrayList<Integer> list = new CopyWriteArrayList<>();
- C. Replace line 3 with:
synchronized public static void addItem () {
- D. Replace line 4 with: synchronized (list) (list.add(1);)
- E. Replace line 5 with: Synchronized public void run () {
- F. replace line 6 with:
Synchronized (this) {for (in i = 0, i<5000, i++) WorkPool.addItem(); }
- G. Replace line 6 with:
synchronized (bar) {for (int i= 0; i<5000; i++) WorkPool.addItem(); }

Answer: F

Explanation:

Another way to create synchronized code is with synchronized statements. Unlike synchronized methods, synchronized statements must specify the object that provides the intrinsic lock. For example:

```
public void addName(String name) {  
    synchronized(this) { lastName = name; nameCount++;  
    }  
    nameList.add(name);  
}
```

In this example, the addName method needs to synchronize changes to lastName and nameCount, but also needs to avoid synchronizing invocations of other objects' methods. Without synchronized statements, there would have to be a separate, unsynchronized method for the sole purpose of invoking nameList.add.

The Java Tutorial, Intrinsic Locks and Synchronization

QUESTION: 4

Sam has designed an application. It segregates tasks that are critical and executed frequently from tasks that are non critical and executed less frequently. He has prioritized these tasks based on their criticality and frequency of execution. After close scrutiny, he finds that the tasks designed to be non critical are rarely getting executed. From what kind of problem is the application suffering?

- A. race condition
- B. starvation
- C. deadlock
- D. livelock

Answer: C

Explanation:

Starvation describes a situation where a thread is unable to gain regular access to shared resources and is unable to make progress. This happens when shared resources are made unavailable for long periods by "greedy" threads. For example, suppose an object provides a synchronized method that often takes a long time to return. If one thread invokes this method frequently, other threads that also need frequent synchronized access to the same object will often be blocked.

Reference:

The Java Tutorial, Starvation and Livelock

QUESTION: 5

Give:

```

Class Employee {
public int checkEmail() { /* . . . */ }
public void sendEmail (String email) { /* . . . */ } public Boolean validDateEmail(){ /* . . .
*/ } public void printLetter (String letter) { /* . . . */ }
}

```

Which is correct?

- A. Employee takes advantage of composition.
- B. Employee "has-an" Email.
- C. Employee "is-a" LetterPrinter.
- D. Employee has low cohesion.

Answer: D

Explanation:

The relationship between Employee and e-mail is poorly implemented here. There is low cohesion.

Note:

Low cohesion is associated with undesirable traits such as being difficult to maintain, difficult to test, difficult to reuse, and even difficult to understand.

Cohesion is decreased if:

The functionalities embedded in a class, accessed through its methods, have little in common. Methods carry out many varied activities, often using coarsely-grained or unrelated sets of data. Disadvantages of low cohesion (or "weak cohesion") are:

Increased difficulty in understanding modules.

Increased difficulty in maintaining a system, because logical changes in the domain affect multiple modules, and because changes in one module require changes in related modules. Increased difficulty in reusing a module because most applications won't need the random set of operations provided by a module.

Reference:

Cohesion (computer science)

QUESTION: 6

Which two demonstrate the valid usage of the keyword synchronized?

- A. interface ThreadSafe {
synchronized void doIt();
}
- B. abstract class ThreadSafe {
synchronized abstract void doIt();
}
- C. class ThreadSafe {
synchronized static void soIt () {}

```

}
D. enum ThreadSafe { ONE, TWO, Three;
Synchronized final void doIt () {}
}

```

Answer: C

Explanation:

The Java programming language provides two basic synchronization idioms: synchronized methods and synchronized statements.

To make a method synchronized, simply add the synchronized keyword to its declaration.

QUESTION: 7

Given the incomplete pseudo-code for a fork/join framework application:

```

submit(Data) {
if(Data.size < SMALL_ENOUGH) {
_____ (Data); // line x
}
else {
List<Data> x = _____ (Data); // line Y
for(Data d: x
_____ (d); // line z
}
}

```

And given the missing methods:

process, submit, and splitInHalf

Which three insertions properly complete the pseudo-code?

- A. Insert submit at line X.
- B. Insert splitInHalf at line X.
- C. Insert process at line X.
- D. Insert process at line Y.
- E. Insert splitInHalf at line Y.
- F. Insert process at line Z.
- G. Insert submit at line Z.

Answer: C, E, G

Explanation:

C: If data is small enough then process it. Line X E: If data is not small enough then split it half. Line Y G: After the data has been split (line Y) then recursively submit the splitted data (Line z).

QUESTION: 8

ITEM Table

* ID, INTEGER: PK
 * DESCRIP, VARCHAR(100)
 * PRICE, REAL
 * QUALITY, INTEGER

And given the code fragment (assuming that the SQL query is valid):

```
try {
String query = "SELECT * FROM Item WHERE ID=110";
Statement stmt = conn.createStatement(); ResultSet rs = stmt.executeQuery(query); while
(rs.next ()) {
System.out.println("ID: " + rs.getInt("Id")); System.out.println("Description: " +
rs.getString("Descrip")); System.out.println("Price: " + rs.getDouble("Price"));
System.out.println("Quantity: " + rs.getInt("Quantity"));
}
} catch (SQLException se) {
System.out.println("Error");
}
```

What is the result of compiling and executing this code?

- A. An exception is thrown at runtime
- B. Compile fails
- C. The code prints Error
- D. The code prints information about Item 110

Answer: A

Explanation:

The connection conn is not defined. The code will not compile.

QUESTION: 9

Given:

```
class Deeper {
public Number getDepth() {
return 10;
}
}
```

Which two classes correctly override the getDepth method?

- A. public class deep extends Deeper {
protected integer getDepth(){
return 5;
}
}
- B. public class deep extends Deeper {
public double getDepth() {

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
