250-422

Symantec

*Design & Custom. Of HA Solutions for UNIX using VCS
4.1*

<http://www.ipass4sure.com/exams.asp?examcode=250-422>

The 250-422 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 250-422 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 250-422 exam is very challenging, but with our 250-422 questions and answers practice exam, you can feel confident in obtaining your success on the 250-422 exam on your FIRST TRY!

Symantec 250-422 Exam Features

- Detailed questions and answers for 250-422 exam
- Try a demo before buying any Symantec exam
- 250-422 questions and answers, updated regularly
- Verified 250-422 answers by Experts and bear almost 100% accuracy
- 250-422 tested and verified before publishing
- 250-422 examcollection vce questions with exhibits
- 250-422 same questions as real exam with multiple choice options

Acquiring Symantec certifications are becoming a huge task in the field of I.T. More over these exams like 250-422 exam are now continuously updating and accepting this challenge is itself a task. This 250-422 test is an important part of Symantec certifications. We have the resources to prepare you for this. The 250-422 exam is essential and core part of Symantec certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 250-422 Test and save time and money while developing your skills to pass your Symantec 250-422 Exam? Let us help you climb that ladder of success and pass your 250-422 now!

DEMO EXAM

Question: 1

A database needs to be made highly available. There are currently two identical servers ten meters apart that are to be clustered. Which two pieces of additional information are needed in order to determine the high availability requirements? (Choose two.)

- A. The server operating system version
- B. LAN capacity
- C. The database version
- D. The client operating system version
- E. The distance between clients and the server

Answer: A, C

Question: 2

What is recommended for the implementation of a high availability environment?

- A. Redundant hardware on the cluster systems
- B. A minimum of two service IP addresses per host
- C. A minimum of 10 GB of local disk space on each host
- D. An SNMP management application installed on shared storage

Answer: A

Question: 3

What is one disadvantage of using active/active clusters over using passive standby systems in a cluster?

- A. Active/Active clusters risk overloading the systems.
- B. Most applications will not support active/active clustering.
- C. Active/Active clusters increase operational overhead.
- D. Active/Active clusters increase the cost of licensing.

Answer: A

Question: 4

You have three Web servers in production that you want to make highly available. You plan to place all three systems in a single VCS cluster. You have already verified that the three Web servers can coexist on the same system. Each Web server contains only static data so shared storage will not be used. You want to ensure that the systems can be clustered and will support VCS. Which four system configuration items must be verified for VCS supportability? (Choose four.)

- A. The storage requirement of each Web server
- B. The operating system version
- C. The total memory available
- D. The I/O throughput of each system
- E. The amount of free storage

Answer: A, B, C, E

Question: 5

You are implementing a new VCS cluster for a new application that includes a database. Both the application and database have to run on the same server at any given time. The application communicates with the database through proprietary interfaces that use shared memory.

External users only connect to the application and never connect to the database directly. The storage is controlled by VERITAS Storage Foundation. Which four resources must be set to critical in VCS to ensure high availability of the application? (Choose four.)

- A. The application engine
- B. The database engine
- C. The database network listener
- D. The application and database file systems
- E. The application and database disk groups
- F. The application and database volume manager private regions

Answer: A, B, D, E

Question: 6

You are implementing a two-system VCS cluster using existing hardware. Each system has as a single 100 Mbps onboard NIC and no other interfaces. Which three additional server configuration items must you collect to verify server supportability in the cluster? (Choose three.)

- A. The operating system versions supported
- B. The amount of memory
- C. The number of power supplies available
- D. The number of I/O slots available

Answer: A, B, D

Question: 7

Which cluster characteristic can only be implemented with custom scripting?

- A. The application data is stored on different directories depending on the system. VCS must monitor the file systems.
- B. The application uses VERITAS Volume Manager commands to grow volumes for additional data. VCS must monitor these volumes.
- C. The application requires multiple virtual IP addresses. VCS must ensure that these addresses stay online.
- D. The application uses VERITAS Volume Manager commands to create new volumes for data. VCS must monitor these volumes.

Answer: D

Question: 8

There is basic information available about an application environment including the hostname, applications installed, and location of hardware. What else needs to be known in order to configure VERITAS Cluster Server?

- A. The CPU serial number
- B. SCSI paths
- C. Boot disk configuration
- D. Public IP addresses

Answer: D

Question: 9

You are designing a cluster where you must have multiple instances of the same application running simultaneously. Which is true concerning running multiple instances of an application under VCS in terms of startup, shutdown, and monitoring?

- A. Each instance must be dependent on the others.
- B. Each instance must be independent of the others.
- C. VCS does not support running multiple instances of the same application.
- D. Each instance must use the same shared disk.

Answer: B

Question: 10

You are the administrator of a set of three two-node VCS clusters. You have been asked to put together a design for changing this set to a single cluster of six nodes. Which component will need to be replaced if it exists in the current cluster?

- A. SAN-based disks containing application data
- B. Parallel service groups
- C. Host-connected SCSI disks containing application data
- D. I/O fencing

Answer: C

Question: 11

You are designing a high availability solution. Transaction processing is the most important service of this application. Other services are not as important and can be down for short periods of time. Which component is NOT critical to this design?

- A. The application program that processes transactions
- B. The proprietary database used by the application program
- C. The file system that stores transactional data processed by the application
- D. The file system that stores reports generated by users

Answer: D

Question: 12

You currently have two separate locations where each location has access to a common SAN. The existing network configuration uses VLANs to allow for layer 2 LAN heartbeat connectivity between the two sites. However, you need to move away from using VLANs due to company policy. How would this change impact the high availability design using VCS?

- A. The change would have no impact on the HA design at all.
- B. You would need to run LLT over UDP.
- C. You need to use a Replicated Data Cluster.
- D. You could only use IO fencing as the heartbeat connections.

Answer: B

Question: 13

There is a front-end application that should only accept client connections when a back-end database application is available. Both applications are to be made highly available under VCS in the same cluster. Which two ways can this be configured in VCS? (Choose two.)

- A. Configure separate service groups for each application with no dependencies.
- B. Configure separate service groups for each application with a dependency.

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
