Question: 1

In preparation for a master server upgrade, you want to launch a backup of the NetBackup catalog. Which two methods accomplish this? (Choose two.)

- A. in the GUI, right-click your configured catalog backup policy, and select manual Backup
- B. in the GUI, right-click on catalog and select backup NetBackup Catalog.
- C. from the command line, run bpbackup with appropriate switches
- D. from the command line, run bpbackupdb with appropriate switches

Answer: B, D

Question: 2

You have an MSSQL database that you need to add to your environment. Which three items do you need to know before backups can be configured? (Choose three.)

- A. the version of MSSQL being used
- B. the kind of authentication being used
- C. the directories in which the database files are located
- D. the backup retentions needed by the DBA

Answer: A, B, D

Question: 3

You need to add a number of Windows servers from another department to your NetBackup Windows 2003 master server. The system administrator for these systems has given you a Domain Administrator account and permission to install the client, but he will not be available to help you. He has not given you access to the computer room where the systems are physically located. What is the supported method for installing the client?

- A. share the installation CD on the network, log into the systems through a remote Terminal session, map the CD and run setup.exe
- B. from the Administration client on the master server, select all the remote clients in post Properties right-click and select client Install
- C. log in to any system on the domain as the domain administrator, run Launch.exe on the install CD and installation to network clients
- D. remote installation is not allowed; the system administrator will have to give you physical access to the new clients

Answer: C

Question: 4

You are currently assigned to conduct a NetBackup assessment for a Storage Area Network environment. The system administrator wants to know how to verify that the Fibre Channel switches are supported by VERITAS. Which two tasks can be done to determine if VERITAS supports the switches? (Choose two.)

- A. review the SNIA Certification List
- B. review the Compatibility Matrix Guide
- C. review the Media Manager Device Configuration Guide
- D. ask the system administrator which types of switches they are using

Answer: B, D

Question: 5

(Choose three.)

- A. in the GUI, right-click on catalog and select onfigure NetBackup Catalog Backup.
- B. individually run bprecover bprecover against your catalog images (tape or disk)
- C. in the GUI, right-click on catalog and select erify NetBackup Catalog Recoverability
- D. in the GUI, check the activity Monitor for catalog backup results

Answer: A, B, D

Question: 6

Which two statements are true about installing multiple media servers? (Choose two.)

- A. A server license key must be installed on each media server.
- B. All media server installations must be pushed from the master server.
- C. All media server installations should be performed as root/administrator.
- D. All media server installations can be pushed from a media server with the same OS.

Answer: A, C

Question: 7

Which directory path on the client can the client's patch level be determined?

- A. <install_path>\Volmgr\Bin\Patch
- B. <install_path>\Patch
- C. <install_path>\Volmgr\Bin\Version
- D. <install_path>\Version

Answer: B

Question: 8

Your company has a single master/media server. You have just updated the NetBackup master server with the latest patch. Now all the hot Oracle database backups fail. What should you do?

- A. patch Oracle Agents on all Oracle clients
- B. reboot the master server after installing the patch
- C. install the latest Oracle Agents patch on the master server
- D. reboot the Oracle clients after installing the patch on the master server

Answer: A

Question: 9

What is required for Shared Storage Option installation?

- A. Fibre Channel connections for all tape devices to be shared
- B. a robot SCSI connection to all participating NetBackup media servers
- C. 1-gigabit Ethernet communication between all participating NetBackup servers
- D. a SSO license key on the NetBackup master server and on all participating NetBackup media servers

Answer: D

Question: 10

Which two steps are required during the initial installation of a NetBackup master server?
(Choose two.)
