<http://www.ipass4sure.com/exams.asp?examcode=310-092>

The 310-092 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 310-092 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 310-092 exam is very challenging, but with our 310-092 questions and answers practice exam, you can feel confident in obtaining your success on the 310-092 exam on your FIRST TRY!

Sun 310-092 Exam Features

- Detailed questions and answers for 310-092 exam
- Try a demo before buying any Sun exam
- 310-092 questions and answers, updated regularly
- Verified 310-092 answers by Experts and bear almost 100% accuracy
- 310-092 tested and verified before publishing
- 310-092 examcollection vce questions with exhibits
- 310-092 same questions as real exam with multiple choice options

Acquiring Sun certifications are becoming a huge task in the field of I.T. More over these exams like 310-092 exam are now continuously updating and accepting this challenge is itself a task. This 310-092 test is an important part of Sun certifications. We have the resources to prepare you for this. The 310-092 exam is essential and core part of Sun certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 310-092 Test and save time and money while developing your skills to pass your Sun 310-092 Exam? Let us help you climb that ladder of success and pass your 310-092 now!

QUESTION: 1

A developer wants to create a business interface for both local and remote usage. For performance reasons the remote interface should NOT be called by a client in the same JVM. Which statement is required to accomplish this, assuming there is no deployment descriptor?

- A. The business methods are defined in one interface which must be annotated with both @Local and @Remote.
- B. The business methods are defined twice in one interface. One method is annotated with @Local and the other is annotated with @Remote.
- C. The business methods are defined in a common interface by two other interfaces which are annotated with @Local and @Remote respectively. The bean implements the super interface.
- D. The business methods are defined in a common interface. It is extended by two interfaces, annotated with @Local and @Remote respectively. Both interfaces are implemented by the bean class.

Answer: D

QUESTION: 2

A developer is creating an entity which is mapped to a table that has a primary key constraint defined on two character columns and would like to use mapping defaults as much as possible to simplify the code. Which two mapping options can be chosen? (Choose two.)

- A. Use an @Id property that constructs a private field as a concatenation of two columns.
- B. Use a separate class to map those two columns and use an @IdClass annotation to denote the primary key field or property in the entity.
- C. Use a separate @Embeddable class to map those two columns and use an @EmbeddedId annotation to denote a single primary key field or property in the entity.
- D. Use a separate @Embeddable class to map those two columns and add two fields or properties to the entity, each marked as @Id, that correspond to the fields or properties in the embeddable class.
- E. Use a separate class to map those two columns. Specify that class using @IdClass annotation on the entity class. Add two fields or properties to the entity, each marked as @Id, that correspond to the fields or properties in that separate class.

Answer: C, E

QUESTION: 3

A developer maps the abstract entity class Account with concrete entity sub-classes CreditCardAccount and SavingsAccount using the single table per class hierarchy

strategy. Which two statements are true? (Choose two.)

- A. Instances of CreditCardAccount and SavingsAccount are stored in the same table.
- B. All columns that correspond to fields declared in Account must be defined as nullable in the database.
- C. The fields declared in Account are stored in a different table than the ones declared in CreditCardAccount and SavingsAccount.
- D. All columns that correspond to fields declared in CreditCardAccount or SavingsAccount must be defined as nullable in the database.

Answer: A, D

QUESTION: 4

A developer writes an enterprise application and packages it into an .ear file. The application contains two persistence units defined at the .ear level with persistence unit names FooPU and BarPU. The application also contains an ejb-jar with one stateless session bean. Which code, when added to the stateless session bean class, injects an EntityManagerFactory at runtime?

- A. @PersistenceUnit
private EntityManagerFactory emf;
- B. @PersistenceContext
private EntityManagerFactory emf;
- C. @PersistenceUnit(unitName="BarPU")
private EntityManagerFactory emf;
- D. @Resource(name="BarPU", type=EntityManagerFactory.class)
private EntityManagerFactory emf;

Answer: C

QUESTION: 5

Which two are true about EJB 3.0 exception classes? (Choose two.)

- A. The javax.ejb.NoSuchEJBException is an application exception.
- B. The javax.ejb.EJBException extends java.lang.RuntimeException.
- C. The javax.ejb.EJBTransactionRequiredException is an application exception.
- D. An application exception must NOT be a subclass of java.rmi.RemoteException.
- E. The javax.ejb.EJBTransactionRolledbackException is an application exception.
- F. Any subclass of java.lang.RuntimeException is always considered a system exception.

Answer: B, D

QUESTION: 6

Which statement about the combination of mapping defaults, annotations, and XML descriptors is correct?

- A. All mapping annotations must always be processed by the persistence provider.
- B. Some annotations, like the @Entity annotation, must always be processed by the persistence provider.
- C. The mapping information for an entity class specified by annotations and in XML descriptors must be distinct.
- D. If multiple entity listeners are defined, the order in which they are invoked can be defined or overwritten in the XML descriptor.

Answer: D

QUESTION: 7

An Application Assembler is given the following stateless session bean:

10. @Stateless public class MyBean implements MyInt {
11. @RolesAllowed("SECRET")
12. public void methodA(int x) {}
13. public void methodA(String y) {}
14. public void methodB(String z) {}
15. }

A deployment descriptor is also supplied, a portion of which reads as follows:

20. <method-permission>
21. <role-name>AGENT</role-name>
22. <method>
23. <ejb-name>MyBean</ejb-name>
24. <method-name>methodA</method-name>
25. </method>
26. </method-permission>

Which statement is true?

- A. A client in any role will be able to access any of the methods.
- B. A client in the role "AGENT" will be able to access any of the methods.
- C. A client in the role "SECRET" will be able to access any of the methods.
- D. A client in the role "AGENT" will be able to access methodB and methodA(String), but not methodA(int).
- E. A client in the role "SECRET" will be able to access methodA(int) and methodB, but NOT methodA(String).

Answer: B

QUESTION: 8

A User entity is in a one-to-many relationship with a Book entity. A developer writes a query to delete users that have a first name of 'Fred' or 'Ginger', and writes the following Java Persistence query language statement: `DELETE FROM User u WHERE u.name IN ('Fred', 'Ginger')` If the query fails with a `PersistenceException`, what can be the cause?

- A. The syntax of the query is NOT correct.
- B. The query causes a foreign key integrity constraint to be violated.
- C. The database does NOT have any users with the name 'Fred' or 'Ginger'.
- D. The entities corresponding to the users with the name 'Fred' or 'Ginger' are already being managed by the persistence context.

Answer: B

QUESTION: 9

A Java EE 5 application contains a session bean which uses a security role `USER`. A group called `people` is defined in an LDAP server. Which two define appropriate EJB role responsibilities? (Choose two.)

- A. The deployer defines and configures the LDAP realm.
- B. The system administrator defines and configures the LDAP realm.
- C. The deployer maps the application role `USER` to the LDAP group `people`.
- D. The system administrator maps the application role `USER` to the LDAP group `people`.

Answer: B, C

QUESTION: 10

Which two statements are true? (Choose two.)

- A. All types of enterprise beans can be transaction-aware.
- B. Typically, fine-grained objects, such as an employee record, should be remotely accessible.
- C. The client view of any given enterprise bean will be consistent across all EJB 3.0 containers without the need to recompile the bean.
- D. As long as a given enterprise bean is NOT recompiled, its security attributes are guaranteed to be consistent across all EJB 3.0 containers in which it is deployed.

Answer: A, C

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
