# 70-403

## Microsoft

*TS: System Center Virtual Machine Manager 2008 Configuring*

<http://www.ipass4sure.com/exams.asp?examcode=70-403>

Thousands of IT Professionals before you have already passed their 70-403 certification exams using the Microsoft 70-403 Practice Exam from ipass4sure.com. Once you start using our 70-403 exam questions you simply can't stop! You are guaranteed to pass your Microsoft 70-403 test with ease and in your first attempt.

Here's what you can expect from the ipass4sure Microsoft 70-403 course:

- \* Up-to-Date Microsoft 70-403 questions designed to familiarize you with the real exam.
- \* 100% correct Microsoft 70-403 answers you simply can't find in other 70-403 courses.
- \* All of our tests are easy to download. Your file will be saved as a 70-403 PDF.
- \* Microsoft 70-403 brain dump free content featuring the real 70-403 test questions.

Microsoft 70-403 Certification Exam is of core importance both in your Professional life and Microsoft Certification Path. With Microsoft Certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-403 Certification Exam are an absolute favorite in the industry. If you pass Microsoft 70-403 Certification Exam then career opportunities are open for you.

Our 70-403 Questions & Answers provide you an easy solution to your Microsoft 70-403 Exam Preparation. Our 70-403 Q&As contains the most updated Microsoft 70-403 real tests. You can use our 70-403 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

**Question: 1**

You work as an IT engineer in an international company which is named Wikigo. You are in charge of the network of your company. The network of your company consists of a System Center Virtual Machine Manager (SCVMM) 2008 server named Server01 and three hosts named HostA, HostB, and HostC that are in the All Hosts host group. Each host has 16 GB of memory and contains three virtual machines. You are required to guarantee that the virtual machines on HostC occupy less than 14 GB of memory. What action should you perform to achieve it?

- A. Install File Server Resource Manager (FSRM) on HostC and create a new quota template.
- B. Install Windows System Resource Manager (WSRM) on the SCVMM server and configure quota points on virtual machines that are hosted on HostC.
- C. Add HostC to a new host group and configure host reserves for the new host group.
- D. Add HostC to a new host group and configure quota points on virtual machines that are hosted on Host3.
- E. Install Windows System Resource Manager (WSRM) on the SCVMM server and create a new quota template.

**Answer: C**

**Question: 2**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. You configure a host group and add all hosts to the host group. Server01 is a member of the host group and it has a Self-Service Portal installed which can create virtual machines, but some virtual machines have more than 1 GB of RAM. In order to stop the self-service users creating virtual machines of more than 1 GB of RAM, which option would you choose?

- A. Set the Memory (in MB) value to 1024, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host Properties for Server01.
- B. Create a new template, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host Properties for Server01.
- C. Create a new template, set the Virtual machine memory to 1 GB and create a Self-Service user role and associate the template and the user role.
- D. Set the Memory (in MB) value to 1024, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host group properties for All Hosts.
- E. Create a new hardware profile and set the Virtual machine memory to 1 GB, create a Self Service User role and enable the Set quota for deployed virtual machines option.

**Answer: C**

**Question: 3**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. By using it you can manage a large virtual machine infrastructure. You have a virtual machine that has self-service users installed and the virtual machine has standard hardware configuration. Now you are asked to make sure whether all virtual machines created by self-service users have a standard hardware configuration. To ensure this, what should you do first?

- A. First you should create a new guest operating system profile from the VMM Administrator Console.
- B. First you should run the set-VMhost cmdlet from the VMM Administrator Console.

- C. First you should run the set-vm cmdlet from the Windows PowerShell Virtual Machine Administrator command shell.
- D. First you should run the set-VMhost cmdlet, from the Windows PowerShell Virtual Machine Administrator command shell.
- E. First you should run the set-vm cmdlet from the VMM Administrator Console.

**Answer: B**

**Question: 4**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01, which manages six servers that install the Hyper-V server role on them. Three of them are configured in a failover cluster and the Hyper-V servers are members of a host group named HyperCluster. There is a virtual machine named VM1 in the library share. Now you are assigned a task to make sure that VM1 in the library share can only be assigned to a Hyper-V server in the failover cluster, not to Hyper-V servers out of the failover cluster, so you should find a way to permit other virtual machines to be assigned to all Hyper-V servers. Which solution should you choose?

- A. The way to modify the quota point value for VM1.
- B. The way to deploy the hosts that are members of the failover cluster as unavailable for placement.
- C. The way to modify the hardware configuration for VM1.
- D. The way to deploy the hosts that are not members of the failover cluster as unavailable for placement.

**Answer: C**

**Question: 5**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01 which manages two servers named Host01 and Host02. Both of Host01 and Host02 have the Hyper-V server role installed and they are in a failover cluster group named Hyper Cluster. Each server hosts two virtual machines. You are assigned a task to move the two virtual machines from Host01 to Host02. What should you do to accomplish this task?

- A. You should run the Validate a Configuration Wizard in Failover Cluster Management.
- B. You should evict the Host01 node in Failover Cluster Management.
- C. You should modify the virtual machine properties in Failover Cluster Management.
- D. You should modify the virtual machine properties in the VMM Administrator Console.
- E. You should run the Migrate Virtual Machine Wizard in the VMM Administrator Console.

**Answer: E**

**Question: 6**

You work as an IT engineer in an international company named Wikigo. You are responsible for the network of the company. The network of your company consists of a System Center Virtual Machine Manager (SCVMM) 2008 server named Server01. You are responsible for Server01 that runs Windows Server 2008. First you have the Web Server (IIS) server role installed on Server01 by using the default configuration, and then you also have the IIS 6 Management Compatibility role service installed on Server01. Meanwhile, you try to have the Self-Service Portal on Server01 installed. After installing the Self-Service Portal on Server01, you find the installation prerequisite check fail to work, so in order to install the Self-Service Portal on Server01 successfully, what should you do?

- A. Disable Windows Firewall.
- B. Disable User Account Control (UAC).
- C. Install the ASP.NET role service.
- D. Configure a new library server share.
- E. Install Windows firewall.

**Answer: C**

**Question: 7**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company and you are in charge of a server named server01 which is configured as a library storing server. You can see the properties of Server01 shown in the exhibit from the library. (Click the Exhibit button.) The checkpoint permits you to store a virtual machine to a previous point in time. Which option would you choose to make sure that checkpoints can be created on Server01?
