# 70-413

## Microsoft

### *Designing and Implementing a Server Infrastructure*

The 70-413 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-413 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 70-413 exam is very challenging, but with our 70-413 questions and answers practice exam, you can feel confident in obtaining your success on the 70-413 exam on your FIRST TRY!

#### Microsoft 70-413 Exam Features

- Detailed questions and answers for 70-413 exam
- Try a demo before buying any Microsoft exam
- 70-413 questions and answers, updated regularly
- Verified 70-413 answers by Experts and bear almost 100% accuracy
- 70-413 tested and verified before publishing
- 70-413 examcollection vce questions with exhibits
- 70-413 same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-413 exam are now continuously updating and accepting this challenge is itself a task. This 70-413 test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-413 exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 70-413 Test and save time and money while developing your skills to pass your Microsoft 70-413 Exam? Let us help you climb that ladder of success and pass your 70-413 now!

**QUESTION: 1**

Your company has a main office. The main office is located in a building that has 10 floors. A datacenter on the ground floor contains a Windows Server 2012 failover cluster. The failover cluster contains a DHCP server resource named DHCP1. All client computers receive their IP addresses from DHCP1. All client computers are part of the 131.107.0.0/16 IPv4 subnet. You plan to implement changes to the network subnets to include a separate subnet for each floor of the office building. The subnets will connect by using routers. You need to recommend changes to the DHCP infrastructure to ensure that all of the client computers can receive their IP configuration by using DHCP. What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Install a remote access server on each floor. Configure a DHCP relay agent on each new DHCP server. Create a scope for each subnet on DHCP1.
- B. Install a DHCP server on each floor. Create a scope for the local subnet on each new DHCP server. Enable DHCP Failover on each new DHCP server.
- C. Configure each router to forward requests for IP addresses to DHCP1. Create a scope for each subnet on DHCP1.
- D. Configure each router to forward requests for IP addresses to DHCP1. Create a scope for the 10.0.0.0/16 subnet on DHCP1.

**Answer: C**

**QUESTION: 2**

You deploy an Active Directory domain named contoso.com to the network. The domain is configured as an Active Directory-integrated zone. All domain controllers run Windows Server 2012 and are DNS servers. You plan to deploy a child domain named operations.contoso.com. You need to recommend changes to the DNS infrastructure to ensure that users in the operations department can access the servers in the contoso.com domain. What should you include in the recommendation?

- A. A zone delegation for \_msdcs.contoso.com
- B. Changes to the replication scope of contoso.com
- C. Changes to the replication scope of \_msdcs.contoso.com
- D. Changes to the replication scope of operations.contoso.com

**Answer: B**

**QUESTION: 3**

Your network contains an Active Directory domain named contoso.com. The domain contains an IP Address Management (IPAM) server. You plan to delegate the administration of IPAM as shown in the following table.

Department name	Requirement
Dept1	View IP address tracking information
Dept2	View IP address spaces
Dept3	Create an IP address block

You need to recommend which IPAM security group must be used for each department. The solution must minimize the number of permissions assigned to each group. What should you recommend?

To answer, drag the appropriate group to the correct department in the answer area. Each group may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

The screenshot shows a drag-and-drop interface. On the left, under the heading "Groups", there are four yellow buttons: "IPAM ASM Administrators", "IPAM IP Audit Administrators", "IPAM MSM Administrators", and "IPAM Users". On the right, under the heading "Answer Area", there are three rows corresponding to "Dept1", "Dept2", and "Dept3". Each row has a light blue box containing the word "Group".

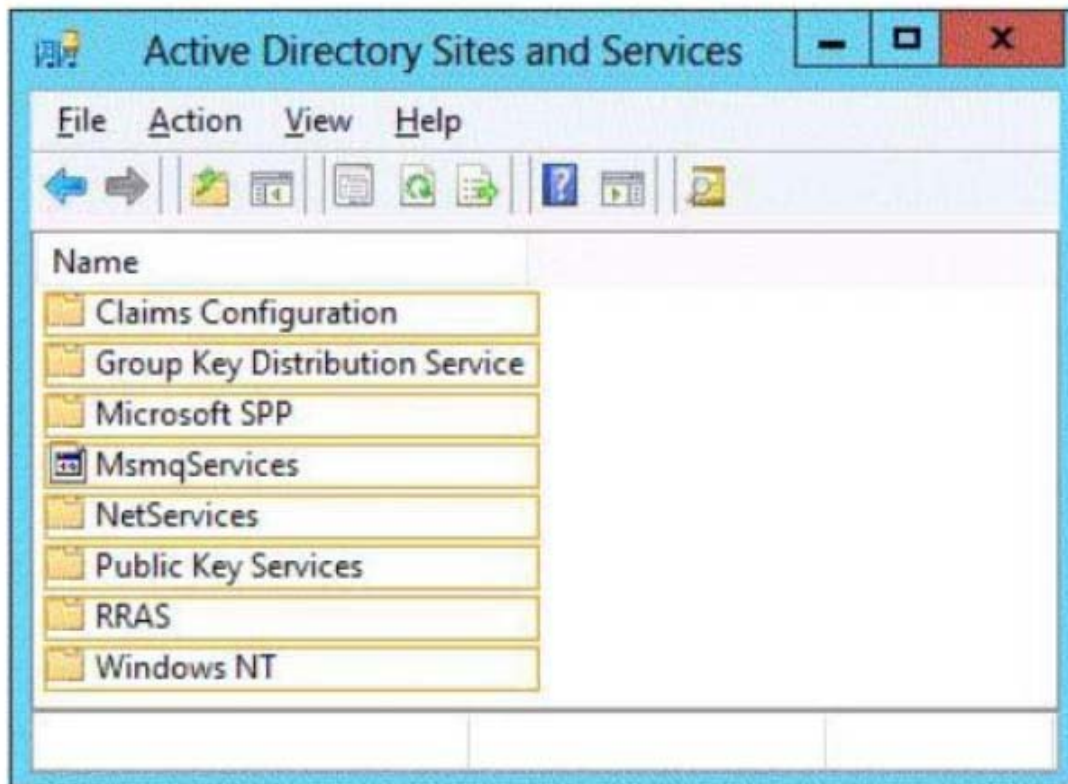

**Answer:**

The screenshot shows the final solution. On the left, under the heading "Groups", there are four yellow buttons: "IPAM MSM Administrators", "IPAM IP Audit Administrators", "IPAM Users", and "IPAM ASM Administrators". On the right, under the heading "Answer Area", there are three rows corresponding to "Dept1", "Dept2", and "Dept3". Each row has a yellow button with a specific group name: "IPAM IP Audit Administrators" for Dept1, "IPAM Users" for Dept2, and "IPAM ASM Administrators" for Dept3.

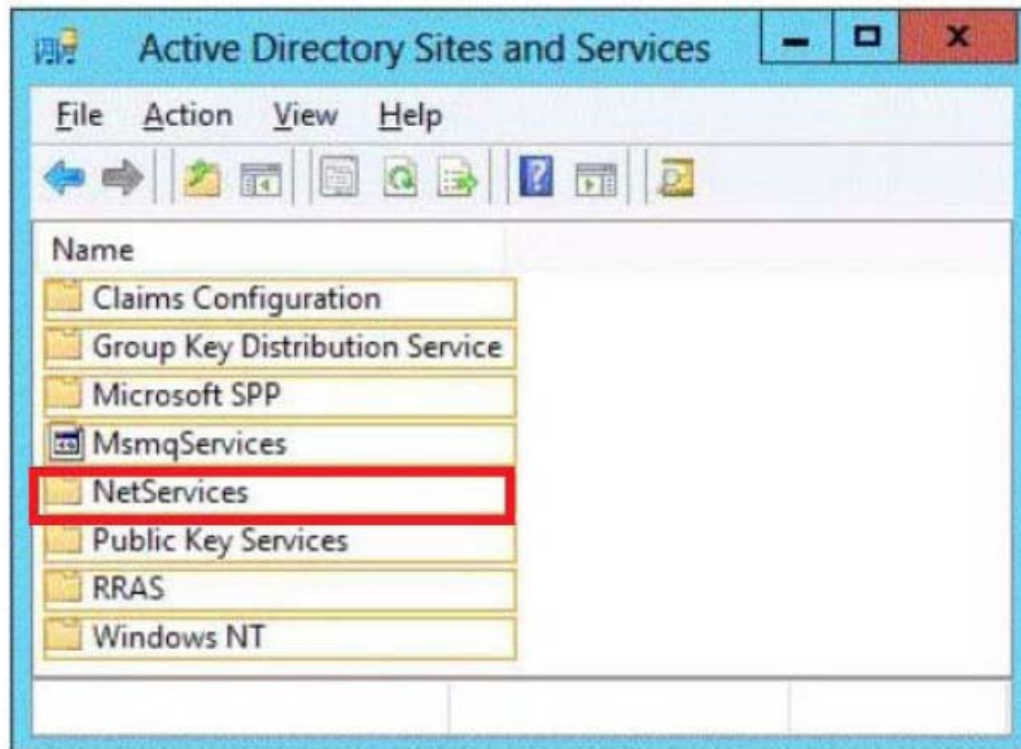

**QUESTION: 4**

Your network contains an Active Directory domain named contoso.com. You plan to implement multiple DHCP servers. An administrator named Admin1 will authorize the DHCP servers. You need to ensure that Admin1 can authorize the planned DHCP servers. To which container should you assign Admin1 permissions?

To answer, select the appropriate node in the answer area.

**Answer:**

**QUESTION: 5**

Your network contains an Active Directory forest named contoso.com. Your company merges with another company that has an Active Directory forest named litwareinc.com. Each forest has one domain. You establish a two-way forest trust between the forests. The network contains three servers. The servers are configured as shown in the following table.

Server name	Configuration
dc1.contoso.com	<ul style="list-style-type: none"> <li>Windows Server 2012</li> <li>Domain controller</li> <li>DNS server that has an Active-Directory integrated zone for contoso.com</li> </ul>
dc1.litwareinc.com	<ul style="list-style-type: none"> <li>Windows Server 2012</li> <li>Domain controller</li> <li>DNS server that has an Active-Directory integrated zone for litwareinc.com</li> </ul>
server1.contoso.com	<ul style="list-style-type: none"> <li>Windows Server 2012</li> <li>Member server</li> </ul>

You confirm that the client computers in each forest can resolve the names of the client computers in both forests. On dc1.litwareinc.com, you create a zone named GlobalNames. You need to recommend changes in both forests to ensure that the users in both forests can resolve single-label names by using the GlobalNames zone in litwareinc.com. Which changes should you recommend?

To answer, drag the appropriate configuration to the correct server in the answer area. Each configuration may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Configurations		Answer Area	
Add a conditional forwarder.		<b>Server name</b>	<b>Configuration</b>
Enable GlobalNames support.		dc1.contoso.com	Configuration
Create an alias (CNAME) record for Server1.			Configuration
Create a GlobalNames service location (SRV) record.		dc1.litwareinc.com	Configuration

**Answer:**

Configurations		Answer Area	
Add a conditional forwarder.		<b>Server name</b>	<b>Configuration</b>
		dc1.contoso.com	Enable GlobalNames support.
Create an alias (CNAME) record for Server1.			Create a GlobalNames service location (SRV) record.
		dc1.litwareinc.com	Enable GlobalNames support.

**QUESTION: 6**

Your network contains an Active Directory domain named contoso.com. All servers run either Windows Server 2008 R2 or Windows Server 2012. Your company uses IP Address Management (IPAM) to manage multiple DHCP servers. A user named User1 is a member of the IPAM Users group and is a member of the local Administrators group on each DHCP server. When User1 edits a DHCP scope by using IPAM, the user receives the error message shown in the exhibit. (Click the Exhibit button.)

## Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
