70-526-CSharp

Microsoft

Microsoft .NET Framework 2.0 - Windows-based Client Development is in development (Csharp)

The 70-526-CSharp practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-526-CSharp Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently.
The 70-526-CSharp exam is very challenging, but with our 70-526-CSharp questions and answers practice e you can feel confident in obtaining your success on the 70-526-CSharp exam on your FIRST TRY!

Microsoft 70-526-CSharp Exam Features

- Detailed questions and answers for 70-526-CSharp exam
- Try a demo before buying any Microsoft exam
- 70-526-CSharp questions and answers, updated regularly
- Verified 70-526-CSharp answers by Experts and bear almost 100% accuracy
- 70-526-CSharp tested and verified before publishing
- 70-526-CSharp examcollection vce questions with exhibits
- 70-526-CSharp same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-526-CSharp exam are now continuously updating and accepting this challenge is itself a task. This 70-526-CSharp test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-526-CSharp exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself.Want to take advantage of the Real 70-526-CSharp Test and save time and money while developing your skills to pass your Microsoft 70-526-CSharp Exam? Let us help you climb that ladder of success and pass your 70-526-CS

QUESTION: 1
You are creating a Windows Form that contains several ToolStrip controls.You need to add functionality that allows a user to drag any ToolStrip control from one edge of the form to another. What should you do?

A. Configure a ToolStripContainer control to fill the form.Add the ToolStrip controls to the ToolStripContainer control.
B. Configure a Panel control to fill the form.Set the Anchor properties of the ToolStrip controls to Top, Bottom, Left, Right.
C. Add a ToolStrip controls to another ToolStrip control that is hosted by a ToolStripControlHost control.
D. Add the ToolStrip controls to the form.Set the Anchor properties of the ToolStrip controls to Top, Bottom, Left, Right. Set the FormBorderStyle property of the form to SizableToolWindow.

Answer: A

QUESTION: 2
You need to create a Windows Forms application that uses a nonrectangular form as its user interface. What should you do?

A. Set the FormBorderStyle property of the form to None.Set the BackgroundImage property of the form to a bitmap file that represents the shape you want form to take. Set the TransparencyKey property to the background color of the bitmap file.
B. Set the FormBorderStyle property of the form to None.Set the BackgroundImage property of the form to a bitmap file that represents the shape you want the form to take. Set the TransparencyKey property to Transparent.
C. Set the FormBorderStyle and BackgroundImageLayout properties to None. Set the BackgroundImage property of the form to a bitmap file that represents the shape you want the form to take. Set the TransparencyKey property to Transparent.
D. Set the FormBorderStyle property to None and the BackColor property to Control.Set the BackgroundImage property of the form to a bitmap file that represents the shape you want the form to take. Set the TransparencyKey property to Transparent.

Answer: A

QUESTION: 3
You create a Windows Forms application.Your application executes a background thread.You need to construct the thread to exit, but you also need to notify the main thread when the background thread has ended. What should you do?

A. Call the Abort method of the thread.
B. Call the Interrupt method of the thread.
C. Call the Join method of the thread.
D. Call the Sleep method of the thread.

Answer: C

QUESTION: 4
You are creating a Windows Forms application that uses a drag-and-drop operation to enable users to copy customer data between a ListBox control and RichTextBox control. The ListBox displays a list of customer Ids to the user. Each item in the ListBox is associated with a custom external data type named CustomerData. The data type stores the customer name along with other customer information, including the address and postal code.You need to ensure that when the user drags a customer name from the ListBox to the RichTextBox all of the information in your custom data type is moved into the RichTextBox.What should you do?

A. Initiate the drag-and-drop operation in the MouseDown event for the ListBox.Call the DoDragDrop method for the ListBox, passing in an instance of CustomerData.Use the GetFormats method in the DragEnter event for the RichTextBox to access the custom data type.
B. Initiate the drag-and-drop operation in the MouseDown event for the ListBox.Call the DoDragDrop method for the ListBox, passing in an instance of CustomerData.Use the GetData method in the DragDrop event for the RichTextBox to access the custom data type.
C. Initiate the drag-and-drop operation in the MouseDown event for the ListBox.In the DragEnter or DragDrop events for the RichTextBox, set the Effect property to DragDropEffects.All. Use the GetFormats method in the DragEnter event for the RichTextBox to access the custom data type.
D. Initiate the drag-and-drop operation in the MouseDown event for the ListBox.In the DragEnter or DragDrop events for the RichTextBox, set the Effect property to DragDropEffects.All.Use the GetDataPresent method in the DragEnter event for the RichTextBox to access the custom data type.

Answer: B

QUESTION: 5
You are creating multiple-document interface (MDI) Windows Forms application.You need to configure the main form to function as the parent form and a second form to function as the child form. What should you do?

A.   Set the IsMdiContainer property of the parent form to True.Set the MdiParent property of the child form to the parent form.
B. Set the IsMdiContainer property of the parent form to True.Set the Parent property of the child form to the parent form.
C. Add the child form to the Controls collection of the parent form. Set the MdiParent property of the child form to the parent form.
D.   Add the child form to the Controls collection of the parent form. Set the Parent property of the child form to the parent form.

Answer: A

QUESTION: 6
You are adding accssibility functionality to a custom, owner-drawn control named Legend.You create a class named AccessibleLegend, which is derived from the AccessibleObject class.The Legend control overrides the GetChild method and returns an AccessibleLegend object.You need to ensure that when the Legend control is disabled, the control still returns the appropriate value for the State property of the AccessibleLegend object.Which value should you configure the State property to return?

A. AccessibleStates.Invisible
B. AccessibleStates.Protected
C. AccessibleStates.ReadOnly
D. AccessibleStates.Unavailable

Answer: D

QUESTION: 7
You are creating a Windows Forms application.Your application uses a custom control. The Custom control is based on a standard button control.You add several extra properties to the control. Some of these properties are read-only.You need to ensure that the read-only properties are not displayed in the Properties window of the design environment. What should you do?

A. Decorate the read-only properties by using the EditorBrowsable attribute, and then set the EditorBrowsable attribute to EditorBrowsableState.Never.
B. Use the DesignTimeVisible attribute, and then set the DesignTimeVisible attribute to False.
C. Decorate the read-only properties by using the Borwsable attribute, and then set the Browsable attribute to False.
D. Decorate the read-only properties by using the DisplayName attribute, and then set the DisplayName attribute to null.

Answer: C

QUESTION: 8

You create a custom control by extending a standard TextBox control. The custom control adds a new property called ValidationColor.You need to ensure that uses can select the color for the ValidationColor property from the Properties window at design time by using the color action palette that is available for other standard Windows Forms controls.What should you do?

A.   Create a custom context menu that contains the chosen color palette and logic. Implement the IcontainerControl interface for your control.
B. Create a custom dialog box that contains the chosen color palette and logic. Configure the FormBorder property of the dialog box to None.Implement the IcontainerControl interface for your control, and use its ActivateControl method to activate the dialog box.
C. Create a custom dialog box that contains the chosen color palette and logic.Configure the FormBorder property of the dialog box to None.In the Set method of your property, write code to instantiate the dialog box and return the selected value.
D. Declare the type of the property as System.Drawing.Color.

Answer: D

QUESTION: 9

You created a custom Windows Forms control that contains width, Height, and SquareFootage properties. The SquareFootage property contains the multiplied value of Width and Height.You need to make SquareFootage visible, while disabling it in the property grid. What should you do?

A. Apply the NotSerialized() attribute to the SquareFootage property.
B. Apply the DesignerSerializationVisibility() attribute to the SquareFootage property, and pass in a value of DesignerSerializationVisibility.Content as a parameter.
C. Appliy the EditorBrowsable attribute to the SquareFootage property, passing in a value of EditorBrowsableState.Never as a parameter.
D. Implement the property by using only a Get accessor.

Answer: D

QUESTION: 10

You are customizing a Windows Form.You want to display a custom icon for your composite control named DialerControl in the toolbox.You need to customize the toolbox icon.You want to achieve this goal by using the minimum amound of effort. Which action or actions should you perform? (Choose all that apply.)

A. Add a bitmap named DialerControl.bmp to the user control project.
B. Change the build action of the bitmap to Embedded Resource.
C. Add a ToolboxBitmap attribute to the DialerControl class, passing in DialerControl.bmp as a parameter.
D. Add a ToolboxBitmap attribute to the DialerControl class, passing in typeof(DialerControl) as a parameter.

Answer: A,B

QUESTION: 11
You create a new custom control by extending a standard TextBox control.You need to replace the default icon for the control with your own custom icon.What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Add the bitmap file that contains the custom icon to the custom control project. Set it's BuildAction property to Compile in the properties window.
B. Add the bitmap file that contains the custom icon to the custom control project.Decorate the control class with the ToolboxBitmap attribute, and specify the location of the bitmap file for the icon.
C. Add the bitmap file that contains the custom icon to the custom control project.Give the bitmap file the same name as your control class, and use the .bmp or .ico file name extention. Set it's BuildAction property to EmbeddedResource in the Properties window.
D. Add the bitmap file that contains the custom icon to the custom control project.Give the bitmap file the same name as your control class, and use the .bmp or .ico file name extention. Set the Copy to Output Directory property of the bitmap to Copy always.

Answer: B,C

QUESTION: 12
You are creating a Windows Form that includes print functionality. The form includes a PrintDocument control. A PrintPage event handler contains code that renders the form data to a default printer.You need to display a preview of the printed document along the lower edge of the form.
