**Microsoft**

*MS.NET Framework 2.0-Web-based Client Development*

<http://www.ipass4sure.com/exams.asp?examcode=70-528-VB>

The 70-528-VB practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-528-VB Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 70-528-VB exam is very challenging, but with our 70-528-VB questions and answers practice exam, you can feel confident in obtaining your success on the 70-528-VB exam on your FIRST TRY!

## Microsoft 70-528-VB Exam Features

- Detailed questions and answers for 70-528-VB exam
- Try a demo before buying any Microsoft exam
- 70-528-VB questions and answers, updated regularly
- Verified 70-528-VB answers by Experts and bear almost 100% accuracy
- 70-528-VB tested and verified before publishing
- 70-528-VB examcollection vce questions with exhibits
- 70-528-VB same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-528-VB exam are now continuously updating and accepting this challenge is itself a task. This 70-528-VB test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-528-VB exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 70-528-VB Test and save time and money while developing your skills to pass your Microsoft 70-528-VB Exam? Let us help you climb that ladder of success and pass your 70-528-VB now

**QUESTION: 1**

You create a Web site to use a Microsoft ASP.NET membership provider. The Web.config file contains the following code fragment.

```
<membership defaultProvider="AppProvider">
<providers>
<clear />
<add      name="AppProvider"      type="System.Web.Security.SqlMembershipProvider"
connectionStringName="AppConnectionString" applicationName="App"
requiresUniqueEmail="true"      enablePasswordRetrieval="true"      requiresQUESTION
NO:AndAnswer="true" maxInvalidPasswordAttempts="5" minRequiredPasswordLength="7"
minRequiredNonalphanumericCharacters="0" passwordAttemptWindow="10"/>
</providers></membership>
```

You need to ensure that the following requirements are met: Passwords are stored securely. Users can recover their passwords. Which attribute should you add to the membership provider configuration?

- A. passwordFormat="Hashed"
- B. passwordFormat="Encrypted"
- C. enablePasswordReset="true"
- D. passwordStrengthRegularExpression="(?!^[0-9]\*\$)(?!^[a-zA-Z]\*\$)^([a-zA-Z0-9]{6,15})\$"

**Answer: B**

**QUESTION: 2**

You have a Web site that uses a Microsoft ASP.NET membership provider. You create a registration Web page that contains the following code fragment.

```
<asp:createuserwizard id="CreateUserWizard1" runat="server">
<WizardSteps>
<asp:CreateUserWizardStep ID="CreateUserWizardStep1" runat="server"/>
<asp:CompleteWizardStep ID="CompleteWizardStep1" runat="server" />
</WizardSteps>
</asp:createuserwizard>
```

You need to ensure that during registration, users type a valid e-mail address on the registration Web page. Which code fragment should you add to the Page\_Load event?

- A. CreateUserWizard1.RequireEmail = true;
- B. CreateUserWizard1.Email = @"^[w-\.] + @ ([w-] + \.) + [w-] {2,4} \$";
- C. CreateUserWizard1.MailDefinition.From = @"^[w-\.] + @ ([w-] + \.) + [w-] {2,4} \$";
- D. CreateUserWizard1.EmailRegularExpression = @"^[w-\.] + @ ([w-] + \.) + [w-] {2,4} \$";

**Answer: D**

**QUESTION: 3**

You have a Web site that uses a Microsoft ASP.NET membership provider. You create a Web page that contains the following code fragment.

```
<asp:LoginStatus id="LoginStatus1" runat="server">
```

You need to ensure that when a user logs out, the Web site redirects the user to the `ComeBackSoon.aspx` page that is located in the same folder.

Which code fragment should you add to the `LoginStatus` control?

- A. `LogoutAction="Redirect" LogoutText="ComeBackSoon.aspx"`
- B. `LogoutAction="Refresh" LogoutPageUrl="ComeBackSoon.aspx"`
- C. `LogoutAction="Redirect" LogoutPageUrl="ComeBackSoon.aspx"`
- D. `LogoutAction="RedirectToLoginPage" LogoutPageUrl="ComeBackSoon.aspx"`

**Answer: C**

**QUESTION: 4**

You are creating a Microsoft ASP.NET solution. You need to ensure that the solution will support Internet browsers that use Wireless Application Protocol (WAP) and XHTML. What should you do?

- A. Create a Microsoft ASP.NET Web site. Add a new Mobile Web Form.
- B. Create a Microsoft ASP.NET Web application. Add a new Web Form.
- C. Create a Microsoft ASP.NET Web application. Add a new Web service.
- D. Create a Microsoft ASP.NET Web site. Add a new Mobile Web configuration file.

**Answer: A**

**QUESTION: 5**

You are creating a Microsoft ASP.NET application. The application contains a Mobile Web Form. You need to ensure that the Mobile Web Form displays text in different fonts and sizes for all labels based on the type of the mobile device that browses the Web site. What should you do?

- A. Add a `StyleSheet` control to the Mobile Web Form. Add a `Style` element to the control for each mobile device.
- B. Add a `StyleSheet` control to the Mobile Web Form. Add a `PagerStyle` element to the control for each mobile device.

- C. Add a DeviceSpecific control to the Mobile Web Form. Add a Filter element for each mobile device in the deviceFilters section of the Web.config file.
- D. Add a DeviceSpecific control to the Mobile Web Form. Add a Choice element for each mobile device in the deviceFilters section of the Web.config file.

**Answer:** C

**QUESTION: 6**

You create a Microsoft ASP.NET Web application. The application is accessed both from desktop Web browsers and from mobile device Web browsers. You develop a custom control. In mobile device browsers, the custom control must contain only a subset of the data displayed in the desktop browser. You need to ensure that the application renders correctly for both desktop browsers and mobile device browsers. What should you do?

- A. Create a ControlAdapter class for the custom control.
- B. Implement the ITemplate interface in the custom control.
- C. Set the EnableTheming property of the custom control to true.
- D. Set the ClientTarget property of the page that contains the custom control to downlevel.

**Answer:** A

**QUESTION: 7**

You create a Microsoft ASP.NET Web application. The application contains a Mobile Web Form. You need to ensure that the Mobile Web Form can display a large volume of text across multiple pages. What should you do?

- A. Set the Paginate property of the page's Form control to true.
- B. Set the Wrapping property of the page's Form control to Wrap.
- C. Set the Action property of the page's Form control to Paginate.
- D. Set the PagerStyle-Wrapping property of the page's Form control to Wrap.

**Answer:** A

**QUESTION: 8**

Your Web site uses custom Themes. Your Web site must support additional Themes based on the user's company name. The company name is set when a user logs on to the Web site. The company's Theme name is stored in a variable named ThemeName. You need to use this variable to dynamically set the Web site's Theme. What should you do?

- A. Add the following code segment to the markup source of each page on the Web site.  
`<%@ Page Theme="ThemeName" ... %>`
- B. Add the following code segment to the Load event of each page on the Web site.  
`Page.Theme = ThemeName`
- C. Add the following code segment to the PreInit event of each page on the Web site.  
`Page.Theme = ThemeName`
- D. Add the following code segment to the Web site's configuration file.  
`<pages theme="ThemeName" />`

**Answer:** C

**QUESTION: 9**

You write a Web application. This application must support multiple languages. You store the localized strings in the application as resources. You want these resources to be accessed according to a user's language preference. You create the following resource files in the App\_GlobalResources folder of your application. myStrings.resx myStrings.en-CA.resx myString.en-US.resx myStrings.fr-CA.resx myStrings.es-MX.resx Each resource file stores a localized version of the following strings: Name, E-mail, Address, and Phone. You create a Web Form that contains one label for each of these strings. You need to ensure that the correct localized version of each string is displayed in each label, according to a user's language preference. What should you do?

- A. Add the following configuration section to the Web.config file.  
`<globalization culture="Auto" />`
- B. Set the directive for each page in your site as follows:  
`<%@ Page UICulture="Auto" %>`
- C. Add the following code segment to the page's load event. lblName.Text = "{myStrings}Name"  
 lblAddress.Text = "{myStrings}Address" lblEmail.Text = "{myStrings}Email" lblPhone.Text = "{myStrings}Phone"
- D. Add the following code segment to the page's load event. lblName.Text = Resources.myStrings.Name  
 lblAddress.Text = Resources.myStrings.Address lblEmail.Text = Resources.myStrings.Email  
 lblPhone.Text = Resources.myStrings.Phone

**Answer:** D

**QUESTION: 10**

You create a Web Form. The Web Form displays sales information as a chart. The chart must be rendered to the user's browser as a .jpeg file. The chart is retrieved by using the following code segment. Dim bmpChart As Bitmap = Chart.GetCurrentSales() You need to display the chart to the user. Which code segment should you use?

- A. Response.ContentType = "text/jpeg"  
 bmpChart.Save(Request.InputStream, System.Drawing.Imaging.ImageFormat.Jpeg)  
 bmpChart.Dispose()
- B. Response.ContentType = "image/bitmap"  
 bmpChart.Save(Response.OutputStream, System.Drawing.Imaging.ImageFormat.Bmp)  
 bmpChart.Dispose()  
 ()
- C. Response.ContentType = "text/html"  
 bmpChart.Save(Response.OutputStream,  
 System.Drawing.Imaging.ImageFormat.MemoryBmp)  
 bmpChart.Dispose()
- D. Response.ContentType = "image/jpeg"  
 bmpChart.Save(Response.OutputStream, System.Drawing.Imaging.ImageFormat.Jpeg)  
 bmpChart.Dispose()  
 ()

**Answer:** D

**QUESTION:** 11

You create a Web Form. The Web Form allows users to calculate values and display the results in a label named lblResults. You need to capture all unhandled exceptions on the Web Form through the Error event. The Error event must capture each unhandled exception and display it on the Web Form. Which code segment should you use?

- A. Protected Sub Page\_Error(ByVal sender As Object, \_ ByVal e As System.EventArgs)  
 Handles Me.Error? lblResults.Text = e.ToString()  
 e = Nothing  
 End Sub
- B. Protected Sub Page\_Error(ByVal sender As Object, \_ ByVal e As System.EventArgs)  
 Handles Me.Error? lblResults.Text = Server.GetLastError().ToString() Server.ClearError()  
 End Sub
- C. Protected Sub Page\_Error(ByVal sender As Object, \_ ByVal e As System.EventArgs)  
 Handles Me.Error? Response.Write(e.ToString())  
 e = Nothing  
 End Sub

```
D. Protected Sub Page_Error(ByVal sender As Object, _
    ByVal e As System.EventArgs)
    Handles Me.Error Response.Write(Server.GetLastError().ToString())
    Server.ClearError()
End Sub
```

**Answer:** D

**QUESTION:** 12

You create a Web Form. The Web Form uses the FormView control to enable a user to edit a record in the database. When the user clicks the Update button on the FormView control, the application must validate that the user has entered data in all of the fields. You need to ensure that the Web Form does not update if the user has not entered data in all of the fields. Which code segment should you use?

- A. Protected Sub FormView1\_ItemUpdating(ByVal sender As Object, \_ ByVal e As System.Web.UI.WebControls.FormViewUpdateEventArgs) \_  
Handles FormView1.ItemUpdating  
Dim entry As DictionaryEntry  
For Each entry In e.Keys  
If entry.Value.ToString() = System.String.Empty Then  
B. Cancel = True  
Return End If Next entry End Sub
- C. Protected Sub FormView1\_ItemUpdated(ByVal sender As Object, \_ ByVal e As System.Web.UI.WebControls.FormViewUpdatedEventArgs) \_ Handles FormView1.ItemUpdated  
Dim entry As DictionaryEntry For Each entry In e.NewValues If entry.Value.Equals("") Then  
D. KeepInEditMode = True  
Return End If Next entry End Sub
- E. Protected Sub FormView1\_ItemUpdating(ByVal sender As Object, \_ ByVal e As System.Web.UI.WebControls.FormViewUpdateEventArgs) \_ Handles FormView1.ItemUpdating  
Dim entry As DictionaryEntry For Each entry In e.NewValues If entry.Value.Equals("") Then  
F. Cancel = True  
Return End If Next entry End Sub
- G. Protected Sub FormView1\_ItemUpdated(ByVal sender As Object, \_ ByVal e As System.Web.UI.WebControls.FormViewUpdatedEventArgs) \_ Handles FormView1.ItemUpdated  
Dim entry As DictionaryEntry  
For Each entry In e.Keys  
If entry.Value.ToString() = System.String.Empty Then  
H. KeepInEditMode = True  
Return End If Next entry End Sub

## Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
