Microsoft

*TS- Visual Studio Tools for 2007 MS Office System
(VTSO)*

<http://www.ipass4sure.com/exams.asp?examcode=70-543-VB>

The 70-543-VB practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-543-VB Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 70-543-VB exam is very challenging, but with our 70-543-VB questions and answers practice exam, you can feel confident in obtaining your success on the 70-543-VB exam on your FIRST TRY!

Microsoft 70-543-VB Exam Features

- Detailed questions and answers for 70-543-VB exam
- Try a demo before buying any Microsoft exam
- 70-543-VB questions and answers, updated regularly
- Verified 70-543-VB answers by Experts and bear almost 100% accuracy
- 70-543-VB tested and verified before publishing
- 70-543-VB examcollection vce questions with exhibits
- 70-543-VB same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-543-VB exam are now continuously updating and accepting this challenge is itself a task. This 70-543-VB test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-543-VB exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 70-543-VB Test and save time and money while developing your skills to pass your Microsoft 70-543-VB Exam? Let us help you climb that ladder of success and pass your 70-543-VB now

QUESTION: 1

You create a Microsoft Office Excel 2007 workbook. You save the workbook in the C:\Data folder as an OpenXML package. You copy a file named Data.xml from the C:\Data folder to the CustomXML folder in the package. You rename the copied file to Item1.xml. You add the following XML fragment to the Document.xml.rels file in the package.

```
< Relationship Id="rId1"
```

```
Type="http://schemas.openxmlformats.org/officeDocument/2006/relationships/CustomXML" Target="..." />
```

You need to ensure that the workbook can use the custom XML document part. Which value should you use for the Target attribute in the XML fragment?

- A. /Data/Data.xml
- B. /CustomXML/Item1.xml
- C. C:/Data/Data.xml
- D. C:/Data/CustomXML/Item1.xml

Answer: B

QUESTION: 2

You create a custom workbook for Microsoft Office Excel 2007 by using Visual Studio Tools for the Microsoft Office System (VSTO). The workbook contains the following data: Static data Data that is imported from .xml files The workbook displays the imported data by using mapped ranges. You need to send only the imported data to a user. What should you do?

- A. Save the workbook as an .xml file, and then send the Workbook.xml file to the user.
- B. Save the workbook as a .zip file, and then send the Workbook.xml file that is contained in the .zip file to the user.
- C. From the Developer Ribbon user interface, export the XML data as an .xml file by using the Export command. Send the .xml file to the user.
- D. From the Design Ribbon user interface, export the XML data to a Microsoft Windows SharePoint Services list by using the Export command. Send the link from the Microsoft Windows SharePoint Services list to the user.

Answer: C

QUESTION: 3

You create a custom template for Microsoft Office Word 2007 by using Visual Studio Tools for the Microsoft Office System (VSTO). You add two Text content controls

named control1 and control2 to the template. The template contains the following custom XML fragment. < ProductList >

```
<Product id="1">
<Name> Chai </Name>
</Product> <Product id="2">
<Name>Chang</Name>
</Product>
</ ProductList >
```

You need to ensure that control1 displays the id of the Product and control2 displays the name of the Product. Which code segment should you use?

- A. Control1.XMLMapping.SetMapping _ ("/ ProductList /Product/id", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
control2.XMLMapping.SetMapping _ ("/ ProductList /Product/Name", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
- B. Control1.XMLMapping.SetMapping _ ("/ ProductList /Product/@id", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
control2.XMLMapping.SetMapping _ ("/ ProductList /Product/Name", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
- C. Control1.XMLMapping.SetMapping _ ("/ ProductList /Product[1]/id", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
control2.XMLMapping.SetMapping _ ("/ ProductList /Product[1]/Name", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
- D. Control1.XMLMapping.SetMapping _ ("/ ProductList /Product[1]/@id", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))
control2.XMLMapping.SetMapping _ ("/ ProductList /Product[1]/Name", "", _ Me.ActiveWindow.Document.CustomXMLParts (1))

Answer: D

QUESTION: 4

You are creating a custom template for Microsoft Office Word 2007 by using Visual Studio Tools for the Microsoft Office System (VSTO). The template contains a custom XML part that consumes data from an XML source. The XML source contains the following XML fragment.<Products> mother board, memory, hard drive, floppy drive, DVD drive </Products> You need to display the Products element as a comma-separated list within a paragraph of text. Which code segment should you use?

- A. Application.ActiveDocument.ContentControls.Add _ (WdContentControlType.wdContentControlRichText, range)
- B. Application.ActiveDocument.ContentControls.Add _

- (WdContentControlType.wdContentControlText, range)
 C. Application.ActiveDocument.ContentControls.Add _
 (WdContentControlType.wdContentControlDropDownList, range)
 D. Application.ActiveDocument.ContentControls.Add _
 (WdContentControlType.wdContentControlCombobox, range)

Answer: B

QUESTION: 5

You are creating a document-level solution for Microsoft Office Word 2003 by using Visual Studio Tools for the Microsoft Office System (VSTO). A transformation file is used to convert the solution document to an HTML file. The path to the transformation file is stored in a variable named filename. The Uniform Resource Identifier (URI) is stored in a variable named uri. An optional alias is stored in a variable named alias. You need to ensure that the solution document uses the transformation file that the user provides. Which code segment should you use?

- A. Me.Application.XMLNamespaces.Add (filename, uri , [alias], True)
 B. Me.XMLSchemaReferences.Add (uri , [alias], filename, True)
 C. Me.XMLNodes.Add (Name:=filename, Namespace:=")
 D. Me.XMLSaveThroughXSLT = filename

Answer: D

QUESTION: 6

You create a Microsoft Office Word 2007 document. The document will use data from a file named Data1.xml. The file is located in the C:\Data folder. You create an application by using Visual Studio Tools for the Microsoft Office System (VSTO). You need to ensure that the application adds the data from the Data1.xml file to the document. Which code segment should you use?

- A. Document.CustomXMLParts.Add(XML:=")
 document.CustomXMLParts(1).Load("C:\data1.xml")
 B. Dim control As ContentControl control = document.ContentControls.Add _ (
 WdContentControlType.wdContentControlText, range)
 control.XMLMapping.SetMapping(_ "C:\data1.xml", "",
 document.CustomXMLParts(1))
 C. Dim xmlPart As CustomXMLPart xmlPart =
 document.CustomXMLParts.Add(XML:=")
 xmlPart.DocumentElement.AppendChildNode(_ "xmlPart", uri,
 MsoCustomXMLNodeType.msoCustomXMLNodeElement, _ "data1.xml")

D. Dim control As ContentControl control = document.ContentControls.Add(_
 WdContentControlType.wdContentControlText, range)
 control.XMLMapping.SetMapping(_"/data1.xml", "", document.CustomXMLParts(1))

Answer: A

QUESTION: 7

You are creating a document-level solution for Microsoft Office Word 2003 by using Visual Studio Tools for the Microsoft Office System (VSTO). The customization contains a predefined schema to validate the data that users add. The path to the schema is stored in a variable named filename. The Unique Resource Identifier (URI) for the schema is stored in a variable named uri. The alias for the schema is stored in a variable named alias. You need to ensure that the schema that the user selects is applied to the solution document. Which code segment should you use?

- A. Me.XMLNodes.Add (filename, "", uri)
- B. Me.Application.XMLNamespaces.Add (filename, uri , [alias], True)
- C. Me.XMLSchemaReferences.Add (uri , [alias], filename, True)
- D. Dim doc As ThisDocument = Globals.ThisDocument
 Me.Application.XMLNamespaces.Item(uri). _ AttachToDocument(doc)

Answer: C

QUESTION: 8

You create an application by using Visual Studio Tools for the Microsoft Office System (VSTO). The application modifies a Microsoft Office Excel custom workbook. The custom workbook displays the data that is contained in an XML file named Salesorder.xml. The Salesorder.xml file uses an XML schema that is stored in a file named Salesorder.xsd. Both the Salesorder.xml file and the Salesorder.xsd file are located in the C:\Data folder. You need to ensure that the data in the Salesorder.xml file is available for mapping. Which code segment should you use?

- A. Dim map As Excel.XmlMap = _ Me.XmlMaps.Add ("C:\Data\Salesorder.xsd",
 "Root") Me.XmlImport ("C:\Data\Salesorder.xml", map, _ True,
 Globals.Sheet1.Range("A1"))
- B. Dim map As Excel.XmlMap = _ Me.XmlMaps.Add ("C:\Data\Salesorder.xml",
 "Root") Me.XmlImport ("C:\Data\Salesorder.xsd", map, _ False,
 Globals.Sheet1.Range("A1"))

C. `Dim map As Excel.XmlMap = _ Me.XmlMaps.Add ("C:\Data\Salesorder.xsd", "Root") Me.XmlImportXml ("C:\Data\Salesorder.xml", map, _ True, Globals.Sheet1.Range("A1"))`

D. `Dim map As Excel.XmlMap = _ Me.XmlMaps.Add ("C:\Data\Salesorder.xml", "Root") Me.XmlImportXml ("C:\Data\Salesorder.xsd", map, _ False, Globals.Sheet1.Range("A1"))`

Answer: A

QUESTION: 9

You create a custom template for Microsoft Office Word 2007 by using Visual Studio Tools for the Microsoft Office System (VSTO). You add a content control to the custom template. The content control is a placeholder for the first paragraph in the documents that use the custom template. You need to ensure that the users can edit the first paragraph but cannot delete it. Which code segment should you use?

- A. `Control.LockContentControl = True control.LockContents = False`
- B. `Control.LockContentControl = True control.LockContents = True`
- C. `Control.LockContentControl = False control.LockContents = True`
- D. `Control.LockContentControl = False control.LockContents = False`

Answer: A

QUESTION: 10

You create a Microsoft Office Word 2007 document. The OpenXML package for the document is shown in the exhibit. (Click the Exhibit button.) You create an XML file named item2.xml. The item2.xml file uses the same schema as the item1.xml file. You add the item2.xml file to the OpenXML package. You need to ensure that the document uses data from the item2.xml file instead of the item1.xml file. What should you do?

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
