Microsoft

UPGRADE: MCAD Skills to MCPD Web Developer by Using the Microsoft .NET Framework

http://www.ipass4sure.com/exams.asp?examcode=70-551

Thousands of IT Professionals before you have already passed their 70-551 certification exams using the Microsoft 70-551 Practice Exam from ipass4sure.com. Once you start using our 70-551 exam questions you simply can't stop! You are guaranteed to pass your Microsoft 70-551 test with ease and in your first attempt.

Here's what you can expect from the ipass4sure Microsoft 70-551 course:

* Up-to-Date Microsoft 70-551 questions designed to familiarize you with the real exam.
* 100% correct Microsoft 70-551 answers you simply can't find in other 70-551 courses.
* All of our tests are easy to download. Your file will be saved as a 70-551 PDF.
* Microsoft 70-551 brain dump free content featuring the real 70-551 test questions.

Microsoft 70-551 Certification Exam is of core importance both in your Professional life and Microsoft Certification Path. With Microsoft Certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-551 Certification Exam are an absolute favorite in the industry. If you pass Microsoft 70-551 Certification Exam then career opportunities are open for you.

Our 70-551 Questions & Answers provide you an easy solution to your Microsoft 70-551 Exam Preparation. Our 70-551 Q&As contains the most updated Microsoft 70-551 real tests. You can use our 70-551 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

DEMO EXAM

For Full Version visit

QUESTION 1
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528. All ASP.NET 1.1 Web applications hosted
by IIS on Certkiller -WS528 are accessed on port 80.
You are required to develop a new ASP.NET inventory application named
CK_Invtry that will be integrated into Certkiller .com's existing e-Commerce Web
site. You want to store all source files for the CK_Invtry application in the
C:\Inetpub\wwwroot\CK_Invtry folder on TESTING-WS528. During development
you must be able to access CK_Invtry at the URL "http://localhost:80/CK_Invtry".
You need to configure the New Web site dialog box in Visual Studio 2005 to meet
your requirements.
What should you do?

A. In the Location field, select File System and set the location to
http://localhost/CK_Invtry.
B. In the Location field, select HTTP and set the location to
C:\Inetpub\wwwroot\CK_Invtry.
C. In the Location field, select File System and set the location to
C:\Inetpub\wwwroot\CK_Invtry.
D. In the Location field, select HTTP and set the location to http://localhost/CK_Invtry.

Answer: D

Explanation: When you select HTTP in the location field, Visual Studio 2005 will
create and configure a Web application in IIS. The source files will be stored in
folder associated with the Web application in IIS. By default this is a folder in
C:\Inetpub\wwwroot.
Incorrect Answers:
A, C: When you select File System in the Location field, Visual studio allows you to
create the Web application in a specified folder. However, you will not be able to access
the application on port 80 as port 80 is used by IIS.
B: When you select HTTP in the location field, you must specify the URL for the project
and not the path. The folder path must be configured in IIS.

QUESTION 2
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528.
You are developing a page named Process.aspx in a shopping cart Web application
that will be integrated into Certkiller .com's existing e-Commerce Web site. The

Process.aspx page allows customers to pay for purchases using their credit cards.
The Process.aspx page contains a Button control that confirms the customer's
payment and calls an external Web service that charges the customer's credit card.
You must implement confirmation and prevent postback unless the customer
confirms payment.
What should you do?

A. Set the OnClientClick property to a JavaScript statement.
B. Set the PostBackUrl property to a JavaScript statement.
C. Set the PostBackUrl property to the URL of a confirmation page.
D. Set the OnClientClick property to the URL of a confirmation page.

Answer: A

Explanation: The OnClientClick property allows you to override the client script
that causes postback to the server. You need to use a JavaScript statement as the
default action of the OnClick event of an HTML element is to submit the page. The
JavaScript statement that will process the confirmation; if the customer declines the
payment, the JavaScript statement will return a false to the control and postback
will not occur.
Incorrect Answers:
B: The PostBackUrl property cannot be set to a JavaScript statement. It can only be set to
a URL. If it is set to a URL it will cause postback to that URL.
C: If you set the PostBackUrl property to the URL of a confirmation page as this cause
the Button control to postback to the confirmation page. You must prevent postback.
D: You should set the OnClientClick property to a JavaScript statement that will process
the confirmation without causing postback.

QUESTION 3
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528.
You are developing a product search page named Search.aspx for Web application
that will be integrated into Certkiller .com's existing e-Commerce Web site. The
Search.aspx page allows customers search for products that match specific criteria.
The search criteria are implemented as CheckBox controls. The Search button is
implemented as a Button control. You want the CheckBox controls to be cleared
when the Search button is clicked.
What should you do?

A. Set the Checked property of each CheckBox to False in the designer.
Set the EnableViewState property of each CheckBox to False in the designer.
B. Set the Checked property of each CheckBox to False in the Page_Load event handler
if the Search.aspx page's IsPostBack property is True.

Set the AutoPostBack property of each CheckBox to False in the designer.
C. Set the Checked property of each CheckBox to False in the designer.
Set the Checked property of each CheckBox to False in the event handler for the
Search button's Click event.
D. Set the EnableViewState property of each CheckBox to False in the designer.
Set the AutoPostBack property of each CheckBox to False in the designer.

Answer: C

Explanation:
To ensure that the initial state of the CheckBox controls are clear, you must set the
Checked property of each CheckBox to False in the designer. You should then set
the Checked property of each CheckBox to False in the event handler for the Search
button's Click event to reset the CheckBox controls to their initial state upon the
Click event.
Incorrect Answers:
A: You should set the Checked property of each CheckBox to False in the designer to
ensure that the initial state of the CheckBox controls are clear. But setting the
EnableViewState property will not clear the CheckBox controls. The EnableViewState
property determines whether the CheckBox controls should be visible or not.
B: Setting the Checked property of each CheckBox to False in the Page_Load event
handler if the Search.aspx page's IsPostBack property is True and the AutoPostBack
property of each CheckBox to False in the designer will clear the CheckBox controls
whenever a postback occurs. You want the CheckBox controls to be cleared when the
Search Button is clicked, not when a postback occurs.
D: The EnableViewState property determines whether the CheckBox controls should be
visible or not. It does not clear the CheckBox controls. The AutoPostBack property will
clear the CheckBox controls whenever a postback occurs. You want the CheckBox
controls to be cleared when the Search Button is clicked, not when a postback occurs.

QUESTION 4
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528.
You are developing a product search page named Search.aspx for Web application
that will be integrated into Certkiller .com's existing e-Commerce Web site. The
Search.aspx page allows customers search for products that match specific criteria.
Once a product is located, you want an image of the product to be displayed. You
want to use an Image control to display the image.
You want to configure the Image control to display a description of the image if the
image cannot be displayed in the customer's Web browser.
What should you do?

A. Set the ToolTip property of the Image control.

B. Set the ImageUrl property of the Image control.
C. Set the AlternateText property of the Image control.
D. Set the DescriptionUrl property of the Image control.

Answer: C

Explanation: The text entered in the AlternateText property is displayed if the
image cannot be displayed in the customer's Web browser.
Incorrect Answers:
A: The text entered in the ToolTip property is displayed when the mouse hovers over the
image. It is not displayed when the image cannot be displayed in the customer's Web
browser.
B: The text entered in the ImageUrl property specified the path to the Image. It does not
display a description when the image cannot be displayed in the customer's Web browser.
C: The text entered in the DescriptionUrl property is used when accessibility features are
turned on. It does not display a description when the image cannot be displayed in the
customer's Web browser.

QUESTION 5
DRAG DROP
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528.
You are developing a navigation application. You add an ImageMap control to a
Web page named NYCity.aspx and set its ImageUrl property to the URL of an
image that represents the street map of central New York. When a user clicks on an
area that represents a building, you want to display a street address for the building
on the same page
You want to configure the NYCity.aspx page and the ImageMap control to
accomplish this task.
What should you do? To answer, select the appropriate actions and arrange them in
the correct order in the work area.

Actions

Set the HotSpotMode property of the ImageMap control to Navigate.
Set the PostBackValue property of each PolygonHotSpot control to building name.
Set the HotSpotMode property of each PolygonHotSpot control to building name.
Handle the Click event of the ImageMap control.
Set the HotSpotMode property of the ImageMap control to PostBack.
Create a PolygonHotSpot control for each building.
Configure the page to implement the IPostBackEventHandler
Configure the page to implement the IPostBackDataHandler

Work Area

Place first action here.
Place second action here.
Place third action here.
Place fourth action here.
Place fifth action here.
Place sixth action here.
Place seventh action here.
Place eighth action here.

Answer:

Actions

Set the HotSpotMode property of the ImageMap control to Navigate.
Set the HotSpotMode property of each PolygonHotSpot control to building name.
Configure the page to implement the IPostBackEventHandler
Configure the page to implement the IPostBackDataHandler

Work Area

Create a PolygonHotSpot control for each building.
Handle the Click event of the ImageMap control.
Set the HotSpotMode property of the ImageMap control to PostBack.
Set the PostBackValue property of each PolygonHotSpot control to building name.
Place fifth action here.
Place sixth action here.
Place seventh action here.
Place eighth action here.

Explanation:
You need to define a hotspot as a set of polygonal coordinates for each building on the ImageMap. You then need to handle the Click event for the ImageMap to capture user input. The Click event contains an ImageMapEventArgs parameter that contains a PostBackValue property that identifies the polygon. You should then set the PostBackValue to a value that will identify the address that needs to be displayed.
Incorrect Answers:
Setting the HotSpotMode of either the ImageMap or PolygonHotSpot will treat these controls as hyperlinks but you want the data top be displayed on the same page.

Therefore you do not need hyperlinks.
You also don't need IPostBackEventHandler and IPostBackDataHandler as these raise
server-side events based on client-side events.

QUESTION 6
You work as a Microsoft ASP.NET developer at Certkiller .com. Certkiller .com uses
the Microsoft Visual Studio .NET 2005 as their application development platform.
You use a Microsoft Windows XP Professional client computer named
Certkiller -WS528 as your development computer. Internet Information Services
(IIS) is installed on Certkiller -WS528.
You are developing a page named Products.aspx in a Web application that contains
three DropDownList controls that are dynamically loaded from a SQL Server 2005
database file. The DropDownList controls represent a vendor list, a certification list,
and an exam list. Certkiller .com customers use the Products.aspx page to select
exams related to particular certifications on offer from a particular vendor. A Go
button initiates the selection. Each DropDownList control has an associated
RequiredFieldValidator control.
Whenever the customer selects a vendor, and the vendor offers certifications, then
the customer must also select a certification if the. If the vendor only offers exams
and not certifications, the certification list should remain hidden. Whenever the
customer selects a certification, the customer must also select an exam. Validation
error messages should only be displayed when the Go button is clicked.
You need to set properties on the vendor DropDownList control.
What should you do?

A. Set the AutoPostBack property to True and the CausesValidation property to False.
B. Set the AutoPostBack property to False and the CausesValidation property to True.
C. Set the AutoPostBack property to True and the CausesValidation property to True.
D. Set the AutoPostBack property to False and the CausesValidation property to False.

Answer: A

Explanation: You need to set the AutoPostBack property to
True so that you can programmatically determine whether or not the certifications
DropDownList control should be displayed. By default, validation occurs when a
postback takes place. To prevent this, you should set the CausesValidation property
to False.
Incorrect Answers:
B: If you set the AutoPostBack property to False, you will not be able to determine if the
certification DropDownList control should be displayed or not.
C: If you set the CausesValidation property to True then validation will occur when a
postback takes place. Validation error messages are displayed whenever validation
occurs.
D: If you set the AutoPostBack property to False, you will not be able to determine if the
certification DropDownList control should be displayed or not as postback will not
occur. Validation will also not occur as it occurs when a postback takes place.

Pass4sure $89 Lifetime Membership Features;

- Pass4sure $89 Lifetime Membership includes Over **2500** Exams in One Price.
- **All** Pass4sure Questions and Answers are included in $89 package.
- **All** Pass4sure audio exams are included **free** in package (See List).
- **All** Pass4sure study guides are included **free** in package (See List).
- **Lifetime** login access, no hidden fee, no login expiry.
- **Free updates** for Lifetime.
- **Free Download Access** to All new exams added in future.
- Accurate answers with explanations (If applicable).
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions, Answers and Study Guides are downloadable in **PDF** format.
- Audio Exams are downloadable in **MP3** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success *Guarantee*.
- **Fast**, helpful support 24x7.
