Microsoft

UPGRADE: MCAD Skills to MCTS Web Applications by Using the Microsoft .NET Framework

<http://www.ipass4sure.com/exams.asp?examcode=70-559>

Thousands of IT Professionals before you have already passed their 70-559 certification exams using the Microsoft 70-559 Practice Exam from ipass4sure.com. Once you start using our 70-559 exam questions you simply can't stop! You are guaranteed to pass your Microsoft 70-559 test with ease and in your first attempt.

Here's what you can expect from the ipass4sure Microsoft 70-559 course:

- * Up-to-Date Microsoft 70-559 questions designed to familiarize you with the real exam.
- * 100% correct Microsoft 70-559 answers you simply can't find in other 70-559 courses.
- * All of our tests are easy to download. Your file will be saved as a 70-559 PDF.
- * Microsoft 70-559 brain dump free content featuring the real 70-559 test questions.

Microsoft 70-559 Certification Exam is of core importance both in your Professional life and Microsoft Certification Path. With Microsoft Certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-559 Certification Exam are an absolute favorite in the industry. If you pass Microsoft 70-559 Certification Exam then career opportunities are open for you.

Our 70-559 Questions & Answers provide you an easy solution to your Microsoft 70-559 Exam Preparation. Our 70-559 Q&As contains the most updated Microsoft 70-559 real tests. You can use our 70-559 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

Question: 1

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now according to the customer requirement, you are creating an auditing application to display the trusted ClickOnce applications. The applications are installed on a computer. Now you need the auditing application to display the origin of each trusted application. In the options below, which code segment should you use?

- A. `ApplicationTrustCollection trusts; trusts = ApplicationSecurityManager.UserApplicationTrusts; foreach (ApplicationTrust trust in trusts) { Console.WriteLine(trust.ToString());}`
- B. `ApplicationTrustCollection trusts; trusts = ApplicationSecurityManager.UserApplicationTrusts; foreach (ApplicationTrust trust in trusts) { Console.WriteLine(trust.ExtraInfo.ToString());}`
- C. `ApplicationTrustCollection trusts; trusts = ApplicationSecurityManager.UserApplicationTrusts; foreach (object trust in trusts) { Console.WriteLine(trust.ToString());}`
- D. `ApplicationTrustCollection trusts; trusts = ApplicationSecurityManager.UserApplicationTrusts; foreach (ApplicationTrust trust in trusts) { Console.WriteLine(trust.ApplicationIdentity.FullName);}`

Answer: D

Question: 2

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. There's an SQL query that takes one minute to execute. You execute the SQL query asynchronously by using the following code:

```
AsyncResult ar = cmd.BeginExecuteReader();
```

When you're executing the SQL query is executing, you have to execute a method named `DoWork()`. It takes one second for the method to execute. When the SQL query is executing, `DoWork()` must run as many times as possible. In the options below, which code segment should you use?

- A. `while (ar.AsyncWaitHandle == null) { DoWork();}dr = cmd.EndExecuteReader(ar);`
- B. `while (Thread.CurrentThread.ThreadState == ThreadState.Running) { DoWork();}dr cmd.EndExecuteReader(ar);`
- C. `while (!ar.IsCompleted) { DoWork();}dr = cmd.EndExecuteReader(ar);`
- D. `while (!ar.AsyncWaitHandle.WaitOne()) { DoWork();}dr = cmd.EndExecuteReader(ar);`

Answer: C

Question: 3

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now according to the customer requirement, you create a `DirectorySecurity` object for the working directory. The customer wants you to identify the user accounts and groups that have read and write permissions. So on the `DirectorySecurity` object, which method should you use?

- A. the `AccessRuleFactory` method
- B. the `GetAuditRules` method
- C. the `GetAccessRules` method
- D. the `AuditRuleFactory` method

Answer: C

Question: 4

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now according to the customer requirement, you create a Web site with membership and personalization enabled. Now you must store the membership information by using an existing CRM database. You have to implement the Membership Provider. What should you do?

- A. A new SqlMembershipProvider should be added to the Web.config file.
- B. You should create a custom Membership Provider inheriting from MembershipProvider.
- C. Create a custom MembershipUser inheriting from MembershipUser.
- D. In the Web.config file, you modify the connection string to connect to the CRM database.

Answer: B

Question: 5

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now according to the customer requirement, you create a Web Form which is for members only. The behavior of the Web site varies according to the role of the user. The Web site creates user accounts by using the ASP.NET Membership control. You have to identify whether a user is a member of a particular role. What should you do?

- A. You should pass the role names to User.IsInRole.
- B. You should pass the role names to Roles.RoleExists.
- C. You should pass the user names to Membership.GetUser.
- D. You should pass the user names and passwords to Membership.ValidateUser.

Answer: A

Question: 6

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. The customer needs to compress an array of bytes. So you are writing a method to compress bytes. The bytes are passed to the method in a parameter named document. The contents of the incoming parameter have to be compressed. Which code segment should you use?

- A. `MemoryStream stream = new MemoryStream(document);GZipStream zipStream = new GZipStream(stream, CompressionMode.Compress);zipStream.Write(document, 0, document.Length);zipStream.Close();return stream.ToArray();`
- B. `MemoryStream outputStream = new MemoryStream();GZipStream zipStream = new GZipStream(outputStream, CompressionMode.Compress);zipStream.Write(document, 0, document.Length);zipStream.Close();return outputStream.ToArray();`
- C. `MemoryStream inputStream = new MemoryStream(document);GZipStream zipStream = new GZipStream(inputStream, CompressionMode.Compress); MemoryStream outputStream = new MemoryStream();int b;while ((b = zipStream.ReadByte()) != -1) { outputStream.WriteByte((byte)b);} return outputStream.ToArray();`
- D. `MemoryStream inputStream = new MemoryStream(document);GZipStream zipStream = new GZipStream(inputStream, CompressionMode.Compress); byte[] result = new byte[document.Length];zipStream.Write(result, 0, result.Length); return result;`

Answer: B

Question: 7

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. The customer needs to compress an array of bytes. So you are writing a method. The array is passed to the method in a parameter named document. You need to compress the incoming array of bytes and return the result as an array of bytes. Which code segment should you use?

- A. `MemoryStream strm = new MemoryStream(document); DeflateStream deflate = new DeflateStream(strm, CompressionMode.Compress); byte[] result = new byte[document.Length]; deflate.Write(result, 0, result.Length); return result;`
- B. `MemoryStream strm = new MemoryStream(); DeflateStream deflate = new DeflateStream(strm, CompressionMode.Compress); deflate.Write(document, 0, document.Length); deflate.Close(); return strm.ToArray();`
- C. `MemoryStream strm = new MemoryStream(document); DeflateStream deflate = new DeflateStream(strm, CompressionMode.Compress); deflate.Write(document, 0, document.Length); deflate.Close(); return strm.ToArray();`
- D. `MemoryStream inStream = new MemoryStream(document); DeflateStream deflate = new DeflateStream(inStream, CompressionMode.Compress); MemoryStream outputStream = new MemoryStream(); int b; while ((b = deflate.ReadByte()) != -1) { outputStream.WriteByte((byte)b); } return outputStream.ToArray();`

Answer: B

Question: 8

You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now you are creating a class library according to the customer requirement. The class library contains the class hierarchy defined in the following code segment. (Line numbers are included for reference only.)

```
1 public class Group {  
2     public Employee[] Employees;  
3 }  
4 public class Employee {  
5     public string Name;  
6 }  
7 public class Manager : Employee {  
8     public int Level;  
9 }
```

You create an instance of the Group class then populate the fields of the instance. You receive `InvalidOperationException` when you use the `Serialize` method of the `XmlSerializer` class to serialize the instance. Besides this, you receive the following error message: "There was an error generating the XML document." In order to successfully use the `XmlSerializer` class to serialize instances of the Group class, you have to modify the code segment. And you must make sure that the XML output contains an element for all public fields in the class hierarchy. What should you do?

- A. Insert the following code between lines 1 and 2 of the code segment: `[XmlElement(Type = typeof(Employees))]`
- B. Insert the following code between lines 1 and 2 of the code segment: `[XmlArray(ElementName="Employees")]`
