70-564-VB

Microsoft

*Pro- Designing and Developing ASP.NET Applications
Using the Microsoft .NET Framework 3.5*

<http://www.ipass4sure.com/exams.asp?examcode=70-564-VB>

The 70-564-VB practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-564-VB Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 70-564-VB exam is very challenging, but with our 70-564-VB questions and answers practice exam, you can feel confident in obtaining your success on the 70-564-VB exam on your FIRST TRY!

Microsoft 70-564-VB Exam Features

- Detailed questions and answers for 70-564-VB exam
- Try a demo before buying any Microsoft exam
- 70-564-VB questions and answers, updated regularly
- Verified 70-564-VB answers by Experts and bear almost 100% accuracy
- 70-564-VB tested and verified before publishing
- 70-564-VB examcollection vce questions with exhibits
- 70-564-VB same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-564-VB exam are now continuously updating and accepting this challenge is itself a task. This 70-564-VB test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-564-VB exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 70-564-VB Test and save time and money while developing your skills to pass your Microsoft 70-564-VB Exam? Let us help you climb that ladder of success and pass your 70-564-VB now

QUESTION: 1

You are creating an ASP.NET application by using the .NET Framework 3.5. Users access the application by using different operating systems and different browsers. You plan to incorporate a new control in the application. You need to ensure that the control meets the following business requirements: It can be accessed through the Microsoft Visual Studio .NET 2008 toolbox. It can operate without any other prerequisite controls. Which type of control should you choose?

- A. A user control
- B. An ActiveX control
- C. A Web Parts control
- D. A custom server control

Answer: D

QUESTION: 2

You are creating an ASP.NET application by using the .NET Framework 3.5. One page contains a DataPager control named DPControl1. Several other pages will display DPControl1. You need to ensure that DPControl1 has properties that are exposed to the WebPartZone controls on all other pages. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Add a partstyle element to the WebPartZone control on each page.
- B. Add a zoneelement element to the WebPartZone control on each page.
- C. Copy the DPControl1 control into a new user control. Add a reference to the new user control in each page by using the @Register directive.
- D. Copy the DPControl1 control into a new web form. Add a reference to the new web form in each page by using the @Register directive.

Answer: B, C

QUESTION: 3

You are creating an ASP.NET application by using the .NET Framework 3.5. You need to create a visual element in the application to meet the following requirements: Custom logic can be implemented. The element can be used in multiple places on each page. The element can be used on multiple pages within the application. The element can be redistributed for use in other applications without sharing source code or layout files. What should you do?

- A. Create a theme.
- B. Create a master page.
- C. Create a user control.
- D. Create a custom Web control.

Answer: D

QUESTION: 4

You are creating an ASP.NET application by using the .NET Framework 3.5. You create a custom Web server control to implement the shopping cart functionality in the application. You add the following code fragment to the Web.config file of the application. `<authentication mode="None" /> <sessionState mode="SQLServer" />` You need to ensure that when the user re-opens the Web browser, the application retains the state of the shopping cart. Which state management strategy should you use?

- A. HTTP cookies
- B. Cache object
- C. Profile properties
- D. SessionState object

Answer: A

QUESTION: 5

You are creating an ASP.NET application by using the .NET Framework 3.5. You create a Web form in your application by using a data-bound Web server control. The Web form displays employee information. You need to ensure that the data-bound Web server control meets the following business requirements: It provides built-in sort capabilities. It displays multiple records by using a default tabular format. Which data-bound Web server control should you use?

- A. DataList
- B. ListView
- C. GridView
- D. DetailsView

Answer: C

QUESTION: 6

You are creating an ASP.NET application by using the .NET Framework 3.5. You create a Web form in the application that allows users to provide personal information. You add a DropDownList control to the form to capture the residential country of the user. The default item that the DropDownList control displays is the Select Country option. You need to ensure that users select a valid country other than the default option from the DropDownList control. You also need to ensure that the form is created and maintained by using the minimum amount of development effort. Which validation control should you use?

- A. RangeValidator
- B. CustomValidator
- C. RequiredFieldValidator
- D. RegularExpressionValidator

Answer: C

QUESTION: 7

You are creating an ASP.NET application by using the .NET Framework 3.5. You use the built-in ASP.NET Web server controls in all the Web forms of the application. You access and modify the properties of all Web server controls in the code-behind class of the Web forms. You need to add custom client-side and AJAX behavior to the ASP.NET Web server controls. You also need to ensure minimal effect on the current application code. What should you do?

- A. Add an UpdatePanel control in the Web forms for each built-in ASP.NET Web server control. Place the corresponding ASP.NET Web server controls inside the UpdatePanel controls.
- B. Create a custom extender control for each built-in ASP.NET Web server control. Add the extender controls along with the ASP.NET Web server controls in the Web forms.
- C. Create a Web UserControl control for each built-in ASP.NET Web server control. Encapsulate the corresponding ASP.NET Web server control and the client-side and AJAX behavior code in the UserControl control.
- D. Replace each built-in ASP.NET Web server control with the UserControl control in the Web forms. Create a custom Web server control for each built-in ASP.NET Web server control.
- E. Add the corresponding ASP.NET Web server control as a child control, and encapsulate the client-side and AJAX behavior code in the custom Web server control. Replace each built-in ASP.NET Web server control with the custom Web server control in the Web forms.

Answer: B

QUESTION: 8

You are creating an ASP.NET application by using the .NET Framework 3.5. You need to ensure that the application meets the following requirements: The layout that must be applied to the pages in the application can be selected by the developers. The layout of the pages can be modified by the developers without the source code modification. A consistent page layout is maintained. What should you do?

- A. Create multiple themes for the application. Specify a theme for the application in the Web.config file.
- B. Create multiple master pages for the application. Specify the master page for the application in the Web.config file.
- C. Create a master page that uses multiple Web Part zones. Disable membership and personalization for the application.
- D. Ensure that all pages use multiple Web Part zones. Enable membership and personalization for the application.

Answer: B

QUESTION: 9

You are creating ASP.NET applications by using the .NET Framework 3.5. The applications will be hosted on the same physical Web server. You have the following page layout requirements: A common page layout that applies to all the ASP.NET pages across the Web applications. All pages to automatically reflect changes that are made to the common page layout. You create a master page that provides the page layout. You need to implement a solution that meets the layout requirements. Which three additional tasks should you perform? (Each correct answer presents part of the solution. Choose three.)

- A. Add a @ MasterType directive to each ASP.NET page.
- B. Add a ContentPlaceholder control to each ASP.NET page.
- C. Copy the master page into a single folder on the Web server.
- D. Set the MasterPageFile property on each ASP.NET page to the virtual path of the master page file.
- E. Configure a virtual directory within the default Web site, and point the virtual directory to the folder that contains the master page.
- F. Configure a virtual directory within each Web application, and point the virtual directory to the folder that contains the master page.

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
