70-599

Microsoft

Pro Designing and Developing Windows Phone Applications

http://www.ipass4sure.com/exams.asp?examcode=70-599

The 70-599 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 70-599 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently.
The 70-599 exam is very challenging, but with our 70-599 questions and answers practice exam, you can feel confident in obtaining your success on the 70-599 exam on your FIRST TRY!

Microsoft 70-599 Exam Features

- Detailed questions and answers for 70-599 exam
- Try a demo before buying any Microsoft exam
- 70-599 questions and answers, updated regularly
- Verified 70-599 answers by Experts and bear almost 100% accuracy
- 70-599 tested and verified before publishing
- 70-599 examcollection vce questions with exhibits
- 70-599 same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-599 exam are now continuously updating and accepting this challenge is itself a task. This 70-599 test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-599 exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself.Want to take advantage of the Real 70-599 Test and save time and money while developing your skills to pass your Microsoft 70-599 Exam? Let us help you climb that ladder of success and pass your 70-599 now!

QUESTION: 1
You are testing a Windows Phone 7 application. The application is designed to optimize the frames per second display on both the composite thread and the UI thread. The application testing must validate that this performance metric is achieved. You need to recommend a way to test the application to confirm that the performance metric is met. Which property of the System.Windows.Interop.Settings class should be modified?

A. MaxFrameRate
B. EnableGPUAcceleration
C. EnableRedrawRegions
D. EnableFrameRateCounter

Answer: C

QUESTION: 2
You are designing a Windows Phone 7 application that uses a timer. The application throws an exception when trying to update the UI from a thread other than the UI thread. You need to ensure that the timer updates on the UI thread. Which class should you recommend to prevent the exception?

A. Timer
B. ThreadPool
C. DispatcherTimer
D. Thread

Answer: C

QUESTION: 3
You are debugging a Windows Phone 7 application that contains a breakpoint in the Activated event. You click the Search button of the emulator to perform a Bing search and notice that Microsoft Visual Studio is still attached to the emulator process. You need to step into the code of the Activated event. What should you recommend?

A. Stop the debugger and then start it again.
B. Attach to the XDE.exe process.
C. Launch the application by using the Start button of the emulator and clicking the application icon.
D. Click the Back button of the emulator.

Answer: D

QUESTION: 4
You are testing a Windows Phone 7 application that uses a large amount of device memory at run time. According to the Windows Phone 7 application certification requirements, the application must not use more than 90 MB of device memory if a devices physical memory is only 256 MB. You need to ensure that the application conforms to the application certification requirements. Which properties of the DeviceExtendedProperties class should be used to test the application? (Each correct answer presents part of the solution. Choose all that apply).

A. ApplicationPeakMemoryUsage
B. DeviceTotalMemory
C. DeviceManufacturer
D. DeviceHardwareVersion
E. DeviceFirmwareVersion
F. ApplicationCurrentMemoryUsage

Answer: A, B

QUESTION: 5
You are designing a Windows Phone 7 application that includes data entry functionality. The application will require data to be saved when users click the Start button. The data must be available in the application regardless of how the application is exited and re-entered. You need to recommend a way to ensure the availability of user data. What should you recommend?

A. Use the OnNavigatedFrom() method to store the data in the PhoneApplicationService.State dictionary.
B. Use the Closing and Deactivated events to store the data to isolated storage.
C. Use the OnNavigatedTo() method to store the data to isolated storage.
D. Use the Closing and Deactivated events to store the data in the PhoneApplicationService.State dictionary.

Answer: B

QUESTION: 6
You are designing a Windows Phone 7 application. The current size of the application is 60 MB and includes several high-definition videos. The videos must be as high quality as possible. You need to ensure that users can download the application from the Windows Phone

7 Marketplace over a General Packet Radio Service (GPRS) or 3G phone connection. What should you recommend?

A. Ensure that the maximum XAP file size is within the size limitation of the Windows Phone 7 Marketplace standards for over-the-air downloads.
B. Ensure that the maximum size of each video is within the size limitation of the Windows Phone 7 Marketplace standards for over-the-air downloads.
C. Ensure that the XAP file is smaller than the maximum size of isolated storage.
D. Ensure that each video is smaller than the maximum size of isolated storage.

Answer: A

QUESTION: 7
You are designing a Windows Phone 7 application. The application will capture and store the current date and time each time it is run. When a user leaves the application by using the phone's Start button and navigates back by using the phone's Back button, the application must load previously stored data. You need to ensure that previously stored date and time information is reloaded when a user navigates back to the application by using the phones Back button. What should you recommend to load the saved state data?

A. the Application.Activated event
B. the PhoneApplicationPage.OnNavigatedFrom() method
C. the Application.Launching event
D. the PhoneApplicationPage.OnNavigatedTo() method

Answer: A

QUESTION: 8
You are designing a Windows Phone 7 application. The application must continually perform calculations and update the UI while a user is interacting with the application. You need to ensure that the UI is always able to respond to user input. Which actions should you perform? (Each correct answer presents part of the solution. Choose all that apply.)

A. Use the BackgroundWorker class.
B. Use the Application object for the application.
C. Use the Thread.BeginInvoke method.
D. Use the Dispatcher.BeginInvoke() method.

Answer: A

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of Professional & Certified Experts available via support.
- Free 90 days updates to match real exam scenarios.
- Instant Download Access! No Setup required.
- Price as low as $19, which is 80% more cost effective than others.
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (Android, iPhone, iPod, iPad)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- ***Guaranteed Success***.
- **Fast**, helpful support 24x7.
