Question: 1

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. There is an answer file for Windows Vista. After you download and update for Windows Vista, the update file is copied to a distribution share by you. You must make sure that when you install Windows Vista on all new computers by using the answer file, the update is installed automatically. You should use as little administrative effort as possible. So what action should you perform to achieve the goal?

- A. After the .cab files are extracted from the update file, the .cab files should be copied to the Packages folder in the distribution share. At last you have to update the answer file
- B. After install.wim is mounted from the Windows Vista installation media, the update has to be installed on the computer. At last you have to unmount the image and commit the changes.
- C. After the update file is copied to the Packages folder in the distribution share, you have to update the answer file.
- D. After boot.wim is mounted from the Windows Vista installation media, the update file has to be updated to %systemroot%\system32\softwaredistribution. At last you have to unmount the image and commit the changes.

Answer: A

Question: 2

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. There is a Windows Vista computer in your company. Now the company wants an image of the computer to be created and the image file must use as little disk space as possible. Since you are the technical support, the company assigns this task to you. So what action should you perform to accomplish this task?

- A. In order to accomplish this task, you should run Imagex.exe and the /split and /append parameters have to be specified.
- B. In order to accomplish this task, you should run Oscdimg.exe and the -joliet and iso parameters have to be specified.
- C. In order to accomplish this task, you should run Imagex.exe and specify the /compress and /capture parameters have to be specified.
- D. In order to accomplish this task, you should run Oscdimg.exe and specify the -udf and optimize parameters have to be specified.

Answer: C

Question: 3

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. Recently your company purchases 15 new computers. Since you are the technical support, the company asks you to have these computers installed with Windows Vista. You decide to use the Windows Vista DVD and a USB drive to perform an automatic deployment. The USB drive contains an unattended installation script. A third-party driver is required for the mass storage controllers of the computers. You must make

sure that on the computers, you can perform the unattended installation of Windows Vista. So what action should you perform first?

- A. First the mass storage device driver should be copied to a Windows Preinstallation Environment (Windows PE) build environment.
- B. After each computer from Windows Preinstallation Environment (Windows PE) is started, you have to press F6.
- C. First you should use Windows System Image Manager (Windows SIM) to create and modify an answer file.
- D. First the mass storage device driver should be copied to the sources folder of the installation share.

Answer: C

Question: 4

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. You have Windows Vista installed on your computer. You run Imagex.exe in the following Command Prompt window. What action should you perform to enable Imagex.exe to execute successfully?

```
C:\>imagex.exe /mount d:\sources\install.win 1 c:\mount  
ImageX Tool for Windows  
Copyright (C) Microsoft Corp. All rights reserved.  
ERROR: The current logged on user does not have administrative privileges.  
C:\>_
```

- A. In order to make Imagex.exe run successfully, you should run Imagex.exe and then specify the /mountrw parameter.
- B. In order to make Imagex.exe execute successfully, install.wim has to be copied to a local hard disk drive.
- C. In order to make Imagex.exe run successfully, you have to use elevated privileges to start Windows PE Tools Command Prompt.
- D. In order to make Imagex.exe run successfully, your user account Full Control permissions should be assigned to C:\mount.

Answer: C

Question: 5

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. Now you receive an order from your company manager. According to his requirement, in a Windows Preinstallation Environment (Windows PE) build environment, the WinPE-HTA-Package needs to be installed. So of the following commands, which command should be used?

- A. Iimgmgr.exe
- B. PEimg.exe
- C. Pkgmgr.exe
- D. Wpeutil.exe

Answer: B

Question: 6

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. You manage a stand-alone computer which has no connection to a network and does not have a DVD drive. Now on the computer, you intend to perform an automated installation of Windows Vista. So what action should you perform?

- A. After the computers hard disk drive is formatted, the Windows Vista installation files have to be copied to the hard disk drive and an answer file has to be copied to a floppy disk. At last the computer should be started from the hard disk drive.
- B. After the computers hard disk drive is formatted, an answer file and the Windows Vista installation files should be copied to the hard disk drive. At last the computer should be started from the hard disk drive.
- C. An answer file and the Windows Vista installation files should be copied to a USB drive. After the computer is started from a MS-DOS startup floppy disk, you should run Setup.exe /unattend.
- D. A startup USB drive should be created. The drive should contain an answer file and the Windows Vista installation files. Start the computer from the USB drive.

Answer: D

Question: 7

You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. You manage a Windows Deployment Services (WDS) server which contains five images. All images are for x86-based computers. You get a new image for an x86-based computer which has Windows Vista installed. The new image is added to the WDS server by you. In order to identify whether all six images can be installed, you connect to the WDS server from a test computer. But you receive a report from a user. In the report, he says that when she can only perform the installation of the former five images and fails to access the new image when she connects to the WDS server from the test computer. You have to solve this problem as soon as possible. So what action should you perform to enable him to install the new image?

- A. You have to ask the user to modify the Remote Installation Services (RIS) Choice Options from Default Domain Policy.
- B. You have to ask the user to start the computer from the Windows Vista installation DVD.
- C. You have to ask the user to start the computer from a Windows Preinstallation Environment (Windows PE) CD.
- D. You have to ask the user to modify the security of the image from the Windows Deployment Services console.

Answer: D
