QUESTION: 1

In CA AppLogic, a class definition consists of a class descriptor and one or more class volumes. What does a class volume contain?

- A. A reference to a storage Logical Unit Number (LUN)
- B. All the software required to boot and operate an instance of this class
- C. A reference to the IP address or host name of the commodity server on which the object is stored
- D. The characteristics of the appliance as a component, including its inputs, outputs, configuration properties, and their default values and hardware resources

Answer: B

QUESTION: 2

The WS_API enables you to perform useful functions, such as:

- A. Migrating users from CA AppLogic versions before r3.0.
- B. Implementing a WebX4 Linux cluster as an assembly of appliances.
- C. Integrating CA AppLogic with CA Access Control to protect your web applications.
- D. Invoking commands through the RESTful application programming interface (API).

Answer: D

QUESTION: 3

Which step should you perform when you provision the WS_API?

- A. Edit the input_template.cfg file.
- B. To configure the application, start it immediately after you provision it.
- C. Run the vol manage ws_api_instance:data command and edit the vdc.conf file.
- D. When prompted for a password for Secure Shell (SSH) access, enter ws_api_usr.

Answer: C

QUESTION: 4

Before removing a server from the grid or replacing a hard disk, to retrieve any virtual volume streams off the server, which command should you run?

- A. vol clean
- B. vol scoop
- C. vol migrate
- D. vol reinstate

Answer: C

QUESTION: 5

When you configure authentication for the Backbone Fabric Controller (BFC):

- A. Make sure that all users access the BFC using the BFC shell only.
- B. Make sure that the bfcaadmin user has read-only access to the database replica directory.
- C. Do not change the default 'root' password, because this is required for a correct configuration.
- D. Add any necessary public SSH keys for users that will access the BFC to the '/root/.ssh/authorized_keys' file.

Answer: D

QUESTION: 6

CA AppLogic is able to:

- A. Automatically recover from VN failures with zero downtime.
- B. Manage all applications, servers, and storage with an iPad application.
- C. Handle server or network hardware failures automatically without data loss.
- D. Manage external systems, such as Storage Area Networks (SANs), networks, and grids to redirect failed applications elsewhere.

Answer: C

QUESTION: 7

You need to enable your grid servers to PXE boot on the Backbone Fabric Controller (BFC) network. Which steps do you need to perform? (Choose two)

- A. In System Security, set AC power recovery to OFF.
- B. On the power controller setup screen, set IPMI over LAN to off.
- C. In the boot settings, enable the backbone NIC to boot before the disk.
- D. Enable backbone Network Interface Cards (NICs) to PXE boot in the BIOS.
