Done

Answer:

Place the steps to modify a VuGen script in the correct sequence.

Order	
2	Download the script for editing.
3	Check in the file set.
1	Check out the file set.
4	Modify and save the script.

Sequence Steps to Select

1 2 3 4

Done

QUESTION: 3

What is the purpose of the out-of-the-box views in Business Availability Center? (Select three.)

- A. to populate the CMDB with relevant data
- B. to provide a quick start for working with the CMDB
- C. to view CI Types
- D. to provide a predefined topology
- E. to set up Service Level Agreements
- F. to show a high level overview of the business

Answer: B, D, E

QUESTION: 4

What is the purpose of a view?

- A. provides a subset of the IT universe model in the CMDB
- B. provides a snapshot of the entire IT universe model in the CMDB
- C. provides a differentiator between discovery-based CIs and adapters-based CIs
- D. provides End User Monitor applications the capability to use the IT universe model in the CMDB

Answer: A

QUESTION: 5

Which statement about a Pattern View is correct?

- A. It uses a TQL query to quickly insert a substantial amount of CI data into the CMDB.
- B. It is an extension of the Perspective Based View used to add related CIs in the view dynamically.
- C. It defines a static TQL query which extracts relevant information from the CMDB and provides the currently defined CI status.
- D. It defines a persistent TQL query which extracts relevant information from the CMDB to continuously generate updated results reflected in the view.

Answer: D

QUESTION: 6

How do SiteScope data collectors collect data?

- A. by collecting data from SiteScope agents installed on the target machines
- B. by logging into systems as users from its central server and monitoring remotely
- C. by passively listening to the network traffic to determine server status
- D. by collecting data from both agent and agentless SiteScope probes

Answer: B

QUESTION: 7

What is the difference between events and measurements?

- A. An event is a value returned by a monitor and a measurement is something triggered by an event.
- B. A measurement is a value returned by a monitor and an event is something triggered by a measurement.
- C. Events are triggered by infrastructure monitoring while measurements are triggered by end-user monitoring.
- D. Events are triggered by end-user monitoring while measurements are triggered by infrastructure monitoring.

Answer: B

QUESTION: 8
