HP0-Y38

HP

Deploying HP Enterprise Wireless Networks

<http://www.ipass4sure.com/exams.asp?examcode=HP0-Y38>

The HP0-Y38 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The HP0-Y38 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The HP0-Y38 exam is very challenging, but with our HP0-Y38 questions and answers practice exam, you can feel confident in obtaining your success on the HP0-Y38 exam on your FIRST TRY!

HP HP0-Y38 Exam Features

- Detailed questions and answers for HP0-Y38 exam
- Try a demo before buying any HP exam
- HP0-Y38 questions and answers, updated regularly
- Verified HP0-Y38 answers by Experts and bear almost 100% accuracy
- HP0-Y38 tested and verified before publishing
- HP0-Y38 examcollection vce questions with exhibits
- HP0-Y38 same questions as real exam with multiple choice options

Acquiring HP certifications are becoming a huge task in the field of I.T. More over these exams like HP0-Y38 exam are now continuously updating and accepting this challenge is itself a task. This HP0-Y38 test is an important part of HP certifications. We have the resources to prepare you for this. The HP0-Y38 exam is essential and core part of HP certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real HP0-Y38 Test and save time and money while developing your skills to pass your HP HP0-Y38 Exam? Let us help you climb that ladder of success and pass your HP0-Y38 now!

DEMO EXAM

Exam Name:	Deploying HP Enterprise Wireless Networks		
Exam Type:	HP	Exam Code:	HP0-Y38
Certification	Accredited Systems Engineer (ASE)	Total Questions:	50

Question: 1

Two years ago, you designed and implemented a very large 802.11g WLAN in a convention center. You recently upgraded to an 802.11n network, and the customer is complaining that wireless clients are only achieving maximum data rates of 54 Mbps. Upon investigation, you notice that the administrator configured a wireless service with WPA and TKIP. What should the customer do?

- A. upgrades their software
- B. implements WPA2 with AES
- C. configure the service for 802.11n only clients
- D. implements WPA with AES

Answer: B

Question: 2

You must design a customer network that will use multiple wireless access controllers. The customer wants the most cost-effective redundancy solution. Which option meets this requirement?

- A. N+1
- B. redundant power
- C. dual management cards
- D. N+N+1
- E. clustered controllers

Answer: A

Question: 3

A customer installed two HP A-WX5004 controllers and 200 HP A-WA2620E-AGN access points (APs), which are attached to existing 802.3af PoE switches. The APs are configured to use the 40MHz channel option that should provide 300Mbps. The 802.11n clients are not achieving the expected data rate. Upon further investigation, you discover that the APs are defaulting to 2X2 MIMO. To achieve full speed you configure the radio for 3X3 MIMO, but the radio reverts back to 2X2 MIMO. What else could cause this problem?

- A. disabled Gaussian Frequency Shift Keying (GFSK)
- B. incorrectly set AP spatial streams
- C. low PoE power
- D. faulty antenna connections
- E. setting Pulse Position Modulation (PPM) to 3X3

Answer: C

Question: 4 DRAG DROP

Click the Task button. You are redesigning an existing WLAN and one issue the customer is addressing is unauthorized wireless devices on the network. You recommend implementing the 802.1x authentication solution to remedy this problem. 802.1X authentication comprises three components: supplicant, authenticator and the authentication server. In enterprise environments, all three components are implemented on different devices. Align the devices in the image with the roles of the components.

Exam Name:	Deploying HP Enterprise Wireless Networks		
Exam Type:	HP	Exam Code:	HP0-Y38
Certification	Accredited Systems Engineer (ASE)	Total Questions:	50

WIFI Station Wireless AP Switch Wireless AC RADIUS

Component roles
Place devices here

- Supplicant
- Authenticator
- Authentication Server

Devices

- WIFI Station
- Wireless Active Controller (AC)
- RADIUS
- Switch
- Wireless AP

Done

Answer:

Align the devices shown in the image with the component roles.

WIFI Station Wireless AP Switch Wireless AC RADIUS

Component roles
Place devices here

- Wireless AP
- Wireless Active Controller (AC)
- RADIUS

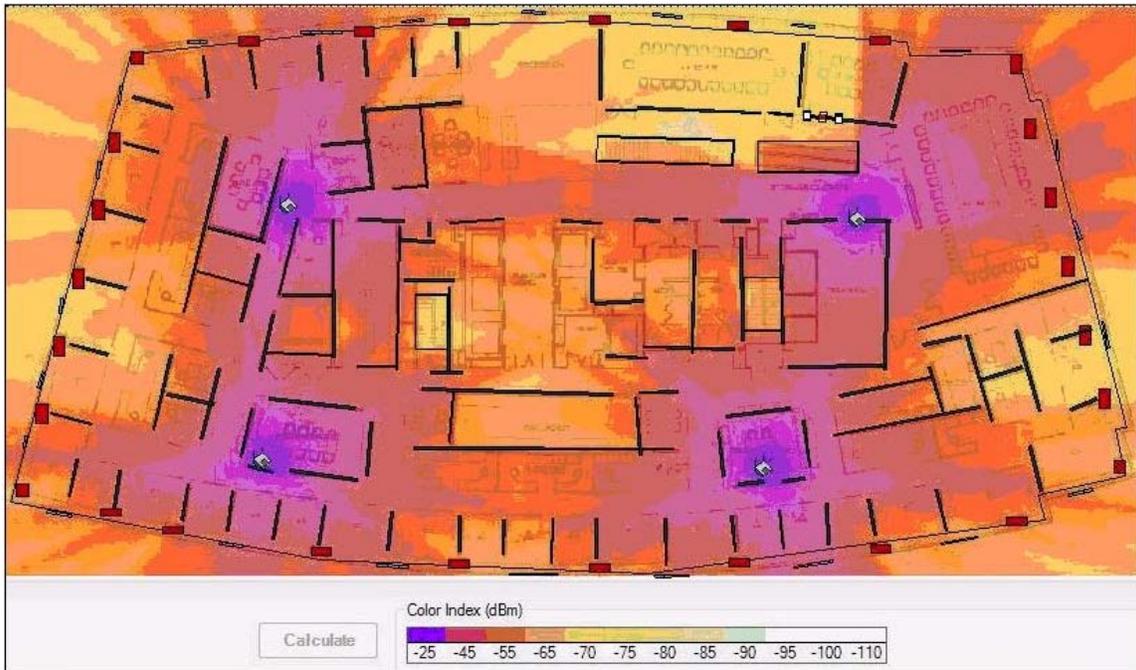

Devices

- WIFI Station
- Wireless Active Controller (AC)
- RADIUS
- Switch
- Wireless AP

Done

Question: 5
Click the Exhibit button.

Exam Name:	Deploying HP Enterprise Wireless Networks		
Exam Type:	HP	Exam Code:	HP0-Y38
Certification	Accredited Systems Engineer (ASE)	Total Questions:	50

Users at this customer site report that wireless connection speeds are slow. You conduct a site survey that yields the results shown in the exhibit. What can you determine from these results?

- A. Signal strength is low in some areas. AP power must be increased.
- B. An obstacle is causing hidden nodes. Another AP should be deployed beyond that obstacle, and the power decreased on both APs.
- C. Signal is being lost in a specific area. The APs need directional antennae to shape the signal.
- D. The APs are operating on 802.11b/g channels, which typically experience a lot of interference. You should change to a different channel and frequency band.

Answer: B

Question: 6

You are deploying an HP Mobility Solution that features access controllers (ACs) and access points (APs), which enforce 802.1X authentication to a Windows Server 2008 running Network Policy and Access Services (NPAS). NPAS assigns users to various VLANs according to their user group and network policy. When you test the deployment, you find that all users can authenticate successfully except those in one Windows domain user group. These users receive messages that windows was unable to connect authenticate successfully except those in one Windows domain user group. These users receive messages that windows was unable to connect and their authentication has failed. What is a possible cause of this problem?

- A. The ACs have the wrong RADIUS shared secret stored in the server.
- B. The Windows client settings are not configured to support VLAN user groups.
- C. The NPAS remote access policy for the user group does not permit wireless access.
- D. The APs in the users' locations are not configured for 802.1X authentication using NPAS.
- E. The ACs do not support the VLAN to which these users are assigned.

Answer: C

Exam Name:	Deploying HP Enterprise Wireless Networks		
Exam Type:	HP	Exam Code:	HP0-Y38
Certification	Accredited Systems Engineer (ASE)	Total Questions:	50

Question: 7

A customer has deployed over 100 A-WA2620E access points (APs) managed by three AWX5002 access controllers. The customer used 802.1X authentication for employees and now wants to implement portal authentication for guest access. What is the most cost-effective way to fulfill this requirement?

- A. setting up two SSIDs, each with different cryptographic parameters
- B. setting up PEAP for the employees and MS-CHAP over EAP for the guests
- C. setting up two VLANs, one for the employee traffic and one for the guest traffic
- D. setting up one SSID for the company with two different cryptographic parameters
- E. replacing the APs with multi radio APs and putting the guests on a separate radio

Answer: A

Question: 8 DRAG DROP

Click the Task button. A customer has implemented authorization, authentication, and encryption for employee access to a new WLAN. The customer wants to add guest access. Identify the options that can be used to provide the strongest WLAN security for guest access and place them next to the corresponding security level.

Options

- WEP
- WPA
- WPA2
- 802.1x
- TKIP
- AES
- IPSec
- Portal
- MD5
- DES
- 3DES
- EAP

Answer:

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
