QUESTION: 3

Answer: C

Explanation:

To find out the maximum virtual disk size, you have to multiply 10 by 36. That makes 360 GB. Now you have to calculate the spare allocation. Normally space allocation is calculated by dividing 36 GB by 4. The result will be 90 GB. Now minus 90 GB from 360 and you will get 270 GB as the maximum virtual disk size for a disk group.
