**QUESTION: 1**

Which factor allows the printer to maintain print speed throughout the duration of a print job?

- A. printing from Tray 1
- B. printing a complex job
- C. printing on transparencies
- D. printing through a network connection

**Answer: D**

**Explanation:**

The only possible answer is D. When you print complex job, the speed cannot be maintained because a complex job takes time to print. Printing on transparencies mean that printer has to disperse ink carefully and it always takes time to print on a transparent paper. Printing from tray is not an applicable option for the question. Printing through a network connection means that the printer is getting sizable print jobs, which translate, into keeping the printer busy. Since a stale or rarely used printer can accumulate dirt and the print heads can get blocked, regular printing keeps these problems at bay.

**QUESTION: 2**

The Real-Time Clock date and time can be set through \_\_\_\_\_. Select two.

- A. the Service ID
- B. the control panel
- C. a PJJ command
- D. a time server on the network

**Answer: B, D**
