- D - The change gets committed automatically when the user leaves the record or the form.

Answer: C

Question: 20

You have created a journal table. You need to write code that identifies whether a line in the journal is empty. You will use this functionality in many places. Using Microsoft Navision standards, how would you implement this code?

- A - Since functions cannot be created in table objects, create a function in a code unit that accepts a record variable as a parameter and returns true if the line is empty and false otherwise.
- B - Because the code can be placed in one Boolean expression, you should create a global variable that holds the value of the expression and uses that variable in all of the objects.
- C - Create a function in the journal form that returns true if the line is empty and false otherwise. It will be used mostly by the form anyway.
- D - Create a function in the journal table that returns true if the line is empty and false otherwise.

Answer: D

Question: 21
