PW0-300

CWNP

Certified Wireless Network Expert

<http://www.ipass4sure.com/exams.asp?examcode=PW0-300>

The PW0-300 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The PW0-300 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The PW0-300 exam is very challenging, but with our PW0-300 questions and answers practice exam, you can feel confident in obtaining your success on the PW0-300 exam on your FIRST TRY!

CWNP PW0-300 Exam Features

- Detailed questions and answers for PW0-300 exam
- Try a demo before buying any CWNP exam
- PW0-300 questions and answers, updated regularly
- Verified PW0-300 answers by Experts and bear almost 100% accuracy
- PW0-300 tested and verified before publishing
- PW0-300 examcollection vce questions with exhibits
- PW0-300 same questions as real exam with multiple choice options

Acquiring CWNP certifications are becoming a huge task in the field of I.T. More over these exams like PW0-300 exam are now continuously updating and accepting this challenge is itself a task. This PW0-300 test is an important part of CWNP certifications. We have the resources to prepare you for this. The PW0-300 exam is essential and core part of CWNP certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real PW0-300 Test and save time and money while developing your skills to pass your CWNP PW0-300 Exam? Let us help you climb that ladder of success and pass your PW0-300 now!

Question: 1

In a Split MAC wireless network architecture, lightweight APs map user priorities (UPs) specified by the QoS STA on incoming frames to _____.

- A. IEEE 802.1D Frame Precedence Values
- B. GRE Priority Bits
- C. IEEE 802.1Q Tag Protocol Identifiers
- D. IP Differentiated Services Code Points
- E. QoS Control Header Values

Answer: D

Question: 2

Given: An ingress frame arrives on the Ethernet port of an autonomous AP marked with an IEEE 802.1D user priority value.

Which IEEE 802.1D user priority values (by name) will assure the data payload carried by the Ethernet frame gets assigned to the highest priority WMM queue?

- A. Controlled Load
- B. Network Control
- C. Video
- D. Voice
- E. Best Effort
- F. Excellent Effort

Answer: B, D

Question: 3

Given: When the delayed Block Ack policy is used between two QoS STAs, the recipient must respond to a BlockAckReq frame with an ACK frame. The recipient must then send its BlockAck response frame in a subsequently obtained TXOP.

Once the contents of the BlockAck frame have been prepared, the recipient must _____.

- A. Send the BlockAck response frame to the originator in the earliest possible TXOP using the highest priority AC.
- B. Send an ATIM to the originator signifying that the BlockAck response frame is ready for transmission.
- C. Include the TID of the BlockAckReq in the next TXOP Request to the HC.
- D. Wait for one PIFS after the next Beacon and transmit the BlockAck response to the originator using the same AC as the BlockAckReq frame.

Answer: A

Question: 4

A QoS STA obtains a TXOP for an access category (AC) after what two parameters are met?

- A. After a scheduled service period ends
- B. The medium is idle at the AIFS[AC] slot boundary
- C. The backoff time for that AC has expired
- D. After a Block ACK Response
- E. After a Target Beacon Transmission Time (TBTT)

Answer: B, C

Question: 5

When using a protocol analyzer to capture conversations over a WLAN, you may often encounter encrypted data frames. Most WLAN protocol analyzers have a feature that allows the analyst to save and reload the captured frames into memory at a later time. Using this functionality, what task can be performed?

- A. When IEEE 802.1X/LEAP is being used as the WLAN security mechanism, the authentication response frame can be replayed from a saved trace file at a later time to successfully authenticate a hacker.
- B. If a user name and password for an IEEE 802.1X/EAP-TTLS security implementation can be obtained through social engineering tactics, the user name and password can be entered into the analyzer to decrypt the frames from a saved trace file.
- C. An analyst can search through the captured frames looking for RADIUS frames that will disclose the user's password.
- D. Encrypted frames may be decrypted offline, after they are captured, by entering a WEP key or WPA passphrase into the analyzer.

Answer: D

Question: 6

How long, in microseconds, is the required Slot Time announced by an AP in an ERP BSS when both HR-DSSS and ERP-OFDM client stations are associated to the AP?

- A. 2
- B. 4
- C. 9
- D. 10
- E. 20

Answer: E

Question: 7

The IEEE 802.11 standard allows for frame fragmentation. Which two fields in the IEEE 802.11 frame are involved in numbering data frame fragments and notifying the receiving station when all of the fragments of a data frame have been received?

- A. Capability Information field
- B. Frame Control field
- C. ERP Information field
- D. Sequence Control field
- E. DS Parameter field
- F. Ordered Service field

Answer: B, D

Question: 8

According to the IEEE 802.11 standard (as amended), transmit power information is carried in which frames?

- A. TPC Report frame
- B. ADDTS Response frame
- C. Probe Response frame
- D. Beacon frame
- E. Channel Switch Announcement frame
- F. Measurement Report frame

Answer: A, C, D

Question: 9

What events will cause an established TSPEC to be deleted by a AP?

- A. Disassociation of the non-AP QoS STA using the TSPEC from the QoS BSS
- B. Traffic Stream inactivity timeout
- C. Reassociation of the non-AP QoS STA with another QoS AP
- D. Receipt of a DELBA frame from a non-AP QoS STA
- E. Receipt of an Update TSPEC frame from a non-AP QoS STA
- F. A Controlled Access Phase (CAP) burst

Answer: A, B, C

Question: 10

Many autonomous access points support IEEE 802.1Q VLAN tagging. When analyzing a WLAN system using IEEE 802.1Q tags, where can the VLAN tag number be seen?

- A. In the Sequence Control field of the MSDU
- B. In the PLCP header's Service field
- C. In the Frame Control field of the MPDU header
- D. In the Ethernet header on the wired port of the access point
- E. In the Beacon Management frame's Capabilities fixed field

Answer: D

Question: 11

Given: ABC Company is implementing a QoS enabled infrastructure that will support both voice and data. The WLAN controller is connected to one of three core layer-3 Ethernet switches. Each core layer-3 Ethernet switch has multiple edge layer-2 Ethernet switches attached. Lightweight APs are connected to all edge layer-2 Ethernet switches. The WLAN controller is on subnet 10.1.1.0/24, and the APs are on numerous other subnets. The APs are connected to the WLAN controller via LWAPP tunnels.

When IEEE 802.11 frames arrive at a lightweight AP from a QoS STA that need to be sent to the WLAN controller, which bits can the AP mark to signal the layer-2 and layer-3 Ethernet switches to use higher priority processing?

- A. The Ethernet frame's 802.1Q priority tag bits
- B. The IP header's TOS bits
- C. The IEEE 802.11 frame's QoS Control bits
- D. The LWAPP header's C bit
- E. The UDP header's PRI bits

Answer: A, B

Question: 12

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
