S90-18A

SOA

Fundamental SOA Security

<http://www.ipass4sure.com/exams.asp?examcode=S90-18A>

The S90-18A practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The S90-18A Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The S90-18A exam is very challenging, but with our S90-18A questions and answers practice exam, you can feel confident in obtaining your success on the S90-18A exam on your FIRST TRY!

SOA S90-18A Exam Features

- Detailed questions and answers for S90-18A exam
- Try a demo before buying any SOA exam
- S90-18A questions and answers, updated regularly
- Verified S90-18A answers by Experts and bear almost 100% accuracy
- S90-18A tested and verified before publishing
- S90-18A examcollection vce questions with exhibits
- S90-18A same questions as real exam with multiple choice options

Acquiring SOA certifications are becoming a huge task in the field of I.T. More over these exams like S90-18A exam are now continuously updating and accepting this challenge is itself a task. This S90-18A test is an important part of SOA certifications. We have the resources to prepare you for this. The S90-18A exam is essential and core part of SOA certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real S90-18A Test and save time and money while developing your skills to pass your SOA S90-18A Exam? Let us help you climb that ladder of success and pass your S90-18A now!

QUESTION: 1

Which of the following is not a hashing algorithm?

- A. MD5
- B. X.509
- C. SHA-1
- D. SHA-256

Answer: B

QUESTION: 2

The application of the Data Origin Authentication pattern only provides message integrity.

- A. True
- B. False

Answer: B

QUESTION: 3

Service A relies on a shared identity store. Service B has its own identity store. Service C also has its own identity store, but must also access the shared identity store used by Service A. Which service has the least reduction in autonomy as a result of its relationship with identity store mechanism(s)?

- A. Service A
- B. Service B
- C. Service C
- D. The autonomy of all services is affected equally

Answer: B

QUESTION: 4

The requirement to defer security related state data at runtime relates directly to the application of which service-orientation principle?

- A. Service Loose Coupling
- B. Service Autonomy

- C. Service Abstraction
- D. None of the above.

Answer: D

QUESTION: 5

The use of XML-Encryption supports the application of the Service Abstraction principle because the actual message remains hidden from the attacker.

- A. True
- B. False

Answer: B

QUESTION: 6

Service A sends a message to Service B which reads the values in the message header to determine whether to forward the message to Service C or Service D. Because of recent attacks on Services C and D, it has been decided to protect the body content of messages using some form of encryption. However, certain restrictions within the design of Service B will not permit it to be changed to support the encryption and decryption of messages. Only Services A, C and D can support message encryption and decryption. Which of the following approaches fulfill these security requirements without changing the role of Service B?

- A. Transport-layer security is implemented between all services.
- B. Message-layer security is implemented between all services.
- C. Service B is removed. Instead, the routing logic is added to Service A.
- D. None of the above

Answer: B

QUESTION: 7

The application of the Brokered Authentication pattern is best suited for a scenario whereby a service consumer does not need to re-authenticate itself with multiple services.

- A. True
- B. False

Answer: B

QUESTION: 8

The SAML and WS-Security industry standards can be applied to the same service composition architecture.

- A. True
- B. False

Answer: A

QUESTION: 9

As a requirement for accessing Service B, Service A needs to encrypt its request message. Service B decrypts the message, makes some changes, encrypts the message, and then forwards it to Service C. However, the message does not make it to Service C. Instead, a runtime error is raised by a service agent that does not support encryption. This service agent only requires access to the message header in order to route the message to the appropriate instance of Service C. It is therefore decided that the header part of the message will not be encrypted. Which of the following can be used to address this requirement?

- A. certificate authority
- B. SAML
- C. non-repudiation
- D. None of the above

Answer: D

QUESTION: 10

Digital signatures use encryption and hashing.

- A. True
- B. False

Answer: A

QUESTION: 11

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
