TB0-106

Tibco

TIBCO Rendezvous 7 Certification

<http://www.ipass4sure.com/exams.asp?examcode=TB0-106>

The TB0-106 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The TB0-106 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The TB0-106 exam is very challenging, but with our TB0-106 questions and answers practice exam, you can feel confident in obtaining your success on the TB0-106 exam on your FIRST TRY!

Tibco TB0-106 Exam Features

- Detailed questions and answers for TB0-106 exam
- Try a demo before buying any Tibco exam
- TB0-106 questions and answers, updated regularly
- Verified TB0-106 answers by Experts and bear almost 100% accuracy
- TB0-106 tested and verified before publishing
- TB0-106 examcollection vce questions with exhibits
- TB0-106 same questions as real exam with multiple choice options

Acquiring Tibco certifications are becoming a huge task in the field of I.T. More over these exams like TB0-106 exam are now continuously updating and accepting this challenge is itself a task. This TB0-106 test is an important part of Tibco certifications. We have the resources to prepare you for this. The TB0-106 exam is essential and core part of Tibco certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real TB0-106 Test and save time and money while developing your skills to pass your Tibco TB0-106 Exam? Let us help you climb that ladder of success and pass your TB0-106 now!

QUESTION 1

TIBCO Rendezvous packets being broadcasted on the network are .

- A. sent only to the hosts on the subnet running RVD
- B. sent to all the hosts on the subnet, even those not running RVD
- C. filtered out by the NIC of hosts on the subnet, unless there is an RVD running
- D. sent to all the hosts on the campus, regardless of which subnet they are attached to

Answer: B

QUESTION 2

When using Reliable QoS, when can messages be lost?

- A. when the receiver application does not process them within 60 seconds
- B. when all datagrams of a single message are not received in order by the receiver RVD daemon
- C. when a receiver RVD daemon does not acknowledge all datagrams of a single message to the sender RVD daemon
- D. when there is a network outage between the publisher and the subscriber that lasts more than the reliability window's size

Answer: D

QUESTION 3

What is Direct Communication?

- A. It is a communication mechanism used for point-to-point communications using TIBCO Rendezvous daemon. It is used to decrease message latency and context switching.
- B. It is a variant of TIBCO Rendezvous point-to-point communications with inbox. It allows you to avoid using the inbox destination subject thereby allowing one-to-many direct connections.
- C. It is a communication mechanism for point-to-point communications only. Without using the TIBCO Rendezvous daemon, you must still specify the inbox message subject. It reduces message latency and context switching.
- D. It is a quality of service that provides a one-to-one connection using TIBCO Rendezvous daemon between two terminals. It provides a monitored environment between the two programs, in addition to reducing the message latency and context switching.

Answer: C

QUESTION 4

Which three statements are true about service group usage? (Choose three.)

- A. Inbound broadcast messages on the transport service can arrive from any network, regardless of the transport network parameter.
- B. Once a network binds a service defined by service parameter, outbound broadcast messages can only travel within the network defined by the transport's network parameter.
- C. Point-to-point messages on the transport service travel on the appropriate network (as determined by the operating system) regardless of the transport network parameter.
- D. The program A, on the computer named TAHOE, has a transport that communicates on the service 7400 over the network NET1. It is legal for any program to subsequently create a transport (connecting to the same daemon process on TAHOE) to communicate on 7400 over any other network, such as NET2.

Answer: A,B,C

QUESTION 5

Exhibit:

In the figure shown in the exhibit, two routing daemon processes, E.Anet. Certkiller .com and F.Anet. Certkiller .com, run on separate host computers. They serve the local client network Anet. Certkiller .com. Routing daemons G.BNet. Certkiller .com and H.BNet. Certkiller .com both serve local client network Bnet. Certkiller .com. Neighbor links connect E with G and H, and also F with G and H.

Which two statements are true about this configuration? (Choose two.)

- A. Messages sent to E.Anet. Certkiller .com will be forwarded to G.BNet. Certkiller .com twice.
 - B. Since these neighbors links offer redundant paths, such configuration is not allowed.
 - C. Messages sent to E.Anet. Certkiller .com will also be received by H.BNet. Certkiller .com only once.
 - D. Messages sent to E.Anet. Certkiller F.Anet. Certkiller .com will be forwarded to G.BNet. Certkiller .com and H.BNet. Certkiller .com only if G and H are passive neighbors of E and F respectively.
 - E. Although these neighbor links offer redundant paths from Anet to Bnet, the routing daemons cooperate to forward each message only once.
- In failure situations, the routing daemons automatically readjust to continue service s Certkiller thly.

Answer: C,E

QUESTION 6

How is multicast enabled in TIBCO Rendezvous?

- A. by setting the proper configuration in the daemon parameter of a transport
- B. by setting the proper configuration in the service parameter of a transport
- C. by setting the proper configuration in the network parameter of a transport
- D. by specifying the parameter -multicast in the TIBCO Rendezvous daemon

Answer: C

QUESTION 7

Which three statements are true about a TIBCO Rendezvous daemon on a computer with more than one network interface? (Choose three.)

- A. When sending an outbound broadcast packet, IP software sends the packet on only one network.
- B. When sending an outbound broadcast packet, IP software sends the packet on multiple networks.
- C. When sending an outbound broadcast packet, IP software needs to use service parameters, not network parameters.
- D. When IP software presents an inbound packet to a client program (such as RVD), it includes the network on which that packet arrived.
- E. TIBCO Rendezvous programs must not attempt to combine communications over different network interfaces using the same UDP or PGM service.
- F. When IP software presents an inbound packet to a client program (such as RVD) it does not include any indication of the network on which that packet arrived.

Answer: A,E,F

QUESTION 8

Which subject structure must be forwarded by a TIBCO Rendezvous routing daemon when deploying RVFT members across different subnets?

- A. `_RVFT.<group_name>`
- B. `_RVFT.<group_name>.*`
- C. `_RVFT.*.<group_name>`
- D. `_RVFT.*.<group_name.>.>`

Answer: C

QUESTION 9

You are deploying two RVRDs on the same subnet. To provide fault tolerance, they MUST .

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
