000-108

IBM

Enterprise Technical Support for POWER7 and AIX

<http://www.ipass4sure.com/exams.asp?examcode=000-108>

The 000-108 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-108 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-108 exam is very challenging, but with our 000-108 questions and answers practice exam, you can feel confident in obtaining your success on the 000-108 exam on your FIRST TRY!

IBM 000-108 Exam Features

- Detailed questions and answers for 000-108 exam
- Try a demo before buying any IBM exam
- 000-108 questions and answers, updated regularly
- Verified 000-108 answers by Experts and bear almost 100% accuracy
- 000-108 tested and verified before publishing
- 000-108 exam questions with exhibits
- 000-108 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-108 exam are now continuously updating and accepting this challenge is itself a task. This 000-108 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-108 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-108 Test and save time and money while developing your skills to pass your IBM 000-108 Exam? Let us help you climb that ladder of success and pass your 000-108 now!

QUESTION: 1

Which power reduction technology requires a software component in order to be activated?

- A. Power capping
- B. Processor folding
- C. Static power saving
- D. Processor core nap mode

Answer: A

QUESTION: 2

Which of the following commands will enable the SEA accounting?

- A. chacct -dev ent14 -attr enable
- B. optimizenet -set accounting=enabled
- C. chsea -dev ent14 -attr accounting=enable
- D. chdev -dev ent14 -attr accounting=enabled

Answer: D

QUESTION: 3

A customer backs up a database using tools provided by the vendor. The backup files are written to a filesystem that was initially created for use by the database, but the backup takes an unexpectedly long time. Which of the following methods will decrease the time required for backups ?

- A. Use the vmo command to increase WriteBehind.
- B. Switch on Concurrent I/O for target filesystems.
- C. Switch off Concurrent I/O for target filesystems.
- D. Use the backup tools provided with the operating system.

Answer: C

QUESTION: 4

A company which sells books and DVDs runs their business on AIX Enterprise Edition on a Power 795. They have LPARs running back-office applications and other LPARs supporting their Internet based retail operations. They are considering a policy of switching

between TurboCore mode and MaxCore mode, depending on workload. Which of the following considerations will have the most impact on the customer's business?

- A. The managed system will need to be restarted to change modes.
- B. There will be fewer cores available when using TurboCore mode.
- C. There will be less L3 cache available per core when using MaxCore mode.
- D. The applications running on the affected LPARs must support MaxCore and TurboCore modes.

Answer: A

QUESTION: 5

A customer has an existing deployment of IBM i LPARs running on POWER6 hardware. The customer is planning to add new AIX and IBM i LPARs on the same hardware. To avoid purchasing additional adapters, there is a requirement for the new LPARs to be completely virtualized. What virtualization options exist for hosting IBM i and AIX LPARs?

- A. Virtualization Engine (VE)
- B. N_Port ID Virtualization (NPIV)
- C. Advanced Power Virtualization (APV)
- D. Network Server Description (NWSD) and VIO Server

Answer: D

QUESTION: 6

Which of the following commands traces a processes system calls, received signals, and machine faults?

- A. prof
- B. topas
- C. truss
- D. mpstat

Answer: C

QUESTION: 7

A system administrator must provide network access to a single VLAN for multiple partitions on a Power 795 server. The Power 795 server has a pair VIO Server (VIOS) partitions, with a Shared Ethernet Adapter (SEA) in each one. Each SEA will use a single-port Ethernet adapter as a backing device. Both SEAs must support network traffic so both adapters are used simultaneously. Network service must be resilient. All client partitions must be able to maintain network access to this VLAN through either VIOS partition if the other VIOS partition fails or is taken out of service. Which of the following configurations would satisfy this goal?

- A. The SEAs are both connected to the same virtual switch. Both SEAs are configured for SEA failover. The client LPARs are configured with one virtual Ethernet adapter.
- B. The SEAs are each connected to separate virtual switches. Both SEAs are configured for SEA failover. The client LPARs are configured with one virtual Ethernet adapter.
- C. The SEAs are both connected to the same virtual switch. Neither SEA is configured for SEA failover. The client LPARs are configured with NIB on two virtual Ethernet adapters.
- D. The SEAs are each connected to separate virtual switches. Neither SEA is configured for SEA failover. The client LPARs are configured with NIB on two virtual Ethernet adapters.

Answer: D

QUESTION: 8

An administrator attempts to migrate a running LPAR using the 'migr_lpar' command. :

The command fails with two errors:

[VIOSE01090002-0445] The destination system is not compatible with the migrating partition.

[VIOSE01090024-0605] Partition with ID 2 cannot be migrated because the destination managed system does not support the desired processor compatibility mode.

What task will help the administrator determine the cause of the errors?

- A. Validate the configured attributes on the Properties tab of the LPAR profile.
- B. Validate that the VIO servers have the Mover Service Partition (MSP) attribute set.
- C. Validate that the required CPU entitlements are available on the destination server.
- D. Validate that the Logical Memory Block (LMB) size is consistent between both source and destination.

Answer: B

QUESTION: 9

An administrator who manages systems in a remote 'lights-out' data center has been sent a set of AIX device drivers for some storage arrays. The software was sent by email from the third party manufacturer, in the form of an ISO image. What is the quickest and easiest way to install the drivers?

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
