000-184

IBM

IBM WebSphere Message Broker V7.0, System Administration

<http://www.ipass4sure.com/exams.asp?examcode=000-184>

The 000-184 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-184 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-184 exam is very challenging, but with our 000-184 questions and answers practice exam, you can feel confident in obtaining your success on the 000-184 exam on your FIRST TRY!

IBM 000-184 Exam Features

- Detailed questions and answers for 000-184 exam
- Try a demo before buying any IBM exam
- 000-184 questions and answers, updated regularly
- Verified 000-184 answers by Experts and bear almost 100% accuracy
- 000-184 tested and verified before publishing
- 000-184 exam questions with exhibits
- 000-184 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-184 exam are now continuously updating and accepting this challenge is itself a task. This 000-184 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-184 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-184 Test and save time and money while developing your skills to pass your IBM 000-184 Exam? Let us help you climb that ladder of success and pass your 000-184 now!

QUESTION: 1

An administrator has installed WebSphere Message Broker Toolkit V7.0 on a production system which has an existing implementation of WebSphere Message Broker V6.1. How should the administrator use the WebSphere Message Broker Toolkit V7.0 to administer WebSphere Message Broker 7.0 and WebSphere Message Broker V6.1?

- A. Use the WebSphere Message Broker Toolkit V7.0 to adopt the V6.1 brokers.
- B. Use the WebSphere Message Broker Toolkit V7.0 to connect to the WebSphere Message Broker V6.1.
- C. Install SupportPac I097 to achieve unified administration through the WebSphere Message Broker Toolkit V7.0.
- D. Administration of WebSphere Message Broker V6.1 is not supported through WebSphere Message Broker Toolkit V7.0.

Answer: D

QUESTION: 2

A company has legacy and modern applications co-existing in their enterprise environment. The legacy application requires business messages in COMMAREA formats while the modern application requires XML format for processing. There is a need for their web application to interact with legacy and modern application to process a transaction. What is the recommended way for implementing the desired solution?

- A. Split the business use case to two different transactions each invoking one target component.
- B. Invoke the modern application on XML format request then process the legacy application request.
- C. Implement two different format request invocation from the application to the target components.
- D. Implement WebSphere Message Broker and route the request on specified formats to the target components.

Answer: D

QUESTION: 3

An administrator has been asked to prepare the environment for migration of WebSphere Message Broker Version 6.0 to WebSphere Message Broker Version 7.0. What steps does the administrator need to perform to prepare the environment for migration? Upgrade the WebSphere Message Broker Version 6.0 to use:

- A. WebSphere MQ Version 7.0.0 before migration, upgrade WebSphere Message Broker runtime to Fix Pack 9 (Version 6.0.0.9) or later, upgrade WebSphere Message Broker toolkit to 6.0.2 or later.
- B. WebSphere MQ Version 7.0.1 before migration, upgrade WebSphere Message Broker runtime to Fix Pack 7 (Version 6.0.0.7) or later, upgrade WebSphere Message Broker toolkit to 6.0.2 or later.
- C. WebSphere MQ Version 7.0.1 before migration, upgrade WebSphere Message Broker runtime to Fix Pack 9 (Version 6.0.0.9) or later, upgrade WebSphere Message Broker toolkit to 6.0.2 or later.
- D. WebSphere MQ Version 6.0.2.10 before migration, upgrade WebSphere Message Broker runtime to Fix Pack 7 (Version 6.0.0.7) or later, upgrade WebSphere Message Broker toolkit to 6.0.2 or later.

Answer: C

QUESTION: 4

A company has a central server, which stores the catalogue price of everything that the company sells. This information is required by all Point of Sale (PoS) terminals in all the stores, and each PoS terminal must be notified of any price change. The PoS terminals connect to the central server through TCP/IP and wait for any price changes. The server sends any price changes to all connected client applications. The company has future plans to include other types of PoS clients which uses WebSphere MQ protocol to interact with the central server. How should the system be implemented?

- A. Implement protocol conversion on the application code.
- B. Implement protocol transformation engines at request entry point.
- C. Implement WebSphere Message Broker with TCP/IP and WebSphere MQ Adapters.
- D. Implement WebSphere Message Broker to support other request protocols like WebSphere MQ.

Answer: D

QUESTION: 5

An administrator has installed WebSphere Message Broker V7.0 on a production system which has an existing implementation of WebSphere Message Broker V6.1. The administrator already has an Administration API (CMP API) script for monitoring the deployed resources on V6.1. What is the option that the administrator can use to monitor the deployed resources for WebSphere Message Broker V7.0?

- A. Install SupportPac I098.
- B. Reuse the existing Administration API script.
- C. Update the CLASSPATH to add new API JARs.

D. Update the existing Administration API script to remove deprecated API calls.

Answer: B

QUESTION: 6

An administrator has been asked to do capacity planning for the implementation of WebSphere Message Broker on an already existing system where other enterprise applications are running. What is the recommended approach for sizing?

- A. Analyze the current capacity sizing on the system.
- B. Implement WebSphere Message Broker and add 1GB RAM in current production.
- C. Implement WebSphere Message Broker on the production so the capacity planning can be done.
- D. Vertically scale the system by adding CPU, RAM & disk space if needed for Message Broker implementation.
- E. Generate the capacity planning report via the capacity planning for a given topology feature in WebSphere Message Broker.

Answer: A, D

QUESTION: 7

An administrator has backed up a broker on AIX using the command `mqsibackupbroker`. After the broker is restored on a new machine, which one of the following tasks must be completed?

- A. Restore JAR files that were deployed in BAR files.
- B. Restore the configurable services that were defined.
- C. Restore the necessary MQ queues for message flows.
- D. Restore the `/var/mqsi/components/<broker>` file system.

Answer: C

QUESTION: 8

A message flow Flow1 is running on execution group EG1 on the broker BRK1. As per the business requirement, the flow accesses the database for transformation and routing. The user ID and password used by the flow need to be changed to adhere to the company's new policy for user IDs and passwords. The administrator has been asked to change the user ID and password for the given message flow without affecting other flows. The administrator is using the `mqsisetdbparms` command to set the user ID and password. Which command should the administrator use next?

- A. mqsistart BRK1
- B. mqsireload BRK1 -e EG1
- C. mqsistartmsgflow BRK1 -e EG1 -m Flow1
- D. mqsistopmsgflow BRK1 -e EG1 -m Flow1

Answer: B

QUESTION: 9

A broker administrator needs to verify the number of message flows that are running or will start to run within each execution group in a running broker. Which detail level should be specified for mqsilist BRK1 -d?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

QUESTION: 10

An administrator has backed up the broker using the command mqsibackupbroker. The command was issued while the broker was running and processing deployments. What is the outcome?

- A. The command completes successfully as normal.
- B. The backup file contains incomplete information and is unusable.
- C. The command does not complete until deployments are complete.
- D. An error message was issued indicating the broker was in use.

Answer: B

QUESTION: 11

An administrator needs to modify the JVM Heap Size property that is associated with an execution group. Which command should the administrator execute?

- A. mqsichangebroker
- B. mqsichangeproperties

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
