QUESTION: 1

An order management system BPM analyst needs to know the timing interval and average activity duration of all the tasks of the order fulfillment to identify the bottlenecks. How should a BPM application developer quickly provide such visibility to the analyst?

A. SLA Overview scoreboard
B. Process Performance scoreboard
C. My Team Performance scoreboard
D. Custom scoreboard using tracking group

Answer: B

QUESTION: 2

In the playback session, the process stakeholder notices that vital business data in the process is being handled correctly for each task. However, there is a concern that the data is not typically accessed immediately by the process participants. While the custom routing satisfies the requirement to get the task to the right people and an escalation path helps to mitigate meeting critical SLAs, the stakeholder asks if more can be implemented in the model to ensure quick access and completion of tasks. How should the BPM application developer implement the flow data requirement?

A. Create a tw.local variable as a pre assignment to notify the participant end user when an activity will be ready to be completed.
B. Create a tw.local variable type as a post assignment to notify the participant end user when an activity is active and ready to be completed.
C. Add a pre assignment to the activity and choose the custom variable to notify the participant end user when an activity is ready to be completed.
D. Add a post assignment to the activity and choose the custom variable to notify the participant end user when an activity is active and ready to be completed.

Answer: C
