

000-270

IBM

IBM Business Process Manager Advanced V7.5 Integration Development

<http://www.ipass4sure.com/exams.asp?examcode=000-270>

The 000-270 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-270 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-270 exam is very challenging, but with our 000-270 questions and answers practice exam, you can feel confident in obtaining your success on the 000-270 exam on your FIRST TRY!

IBM 000-270 Exam Features

- Detailed questions and answers for 000-270 exam
- Try a demo before buying any IBM exam
- 000-270 questions and answers, updated regularly
- Verified 000-270 answers by Experts and bear almost 100% accuracy
- 000-270 tested and verified before publishing
- 000-270 exam questions with exhibits
- 000-270 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-270 exam are now continuously updating and accepting this challenge is itself a task. This 000-270 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-270 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-270 Test and save time and money while developing your skills to pass your IBM 000-270 Exam? Let us help you climb that ladder of success and pass your 000-270 now!

QUESTION: 1

An integration developer is testing the process shown in the following exhibits.

Task Flows Build Activities Properties Problems Server Logs Servers

Receive - Receive

Description Partner:* Component1Interface

Details Interface:* Component1Interface

Server Operation:* operation1

Use data type variables mapping

	Name	Type	Store into Variable
Inputs	input1	string	input1

Snippet - SnippetA

Description Visual Java

```

/*@bpe.readOnlyVariables names="aString"*/
output1 = "MODIFIED";
aString = "MODIFIED";
if ( input1.length() != 0 ) {
    throw new IllegalArgumentException();
}

```

Server Administration Exit Condition Performance Expiration Environment Event Monitor Global Event Settings

If the integration developer starts an instance of the ProcessA process with an input of "HELLO", which of the following strings will the LogSnippet snippet write to System.out?

- A. output1=ORIGINAL :: aString=ORIGINAL
- B. output1=ORIGINAL :: aString=MODIFIED
- C. output1=MODIFIED :: aString=ORIGINAL
- D. output1=MODIFIED :: aString=MODIFIED

Answer: C

QUESTION: 2

An integration developer has developed the following business process, as shown in the exhibit:

The invoke activities Invoke1 and Invoke2 are synchronous invocations and execute in a few seconds. A compensation handler needs to be defined for Snippet2 following a business action from the customer. The customer considers performance to be a key requirement. How would the integration developer implement these requirements? The business process needs to be a:

- A. long-running process because of the required fault handler.
- B. long-running process because of the required compensation handler.
- C. microflow because no human tasks are required.
- D. microflow for best performance as every invoke activity uses synchronous invocation and executes quickly.

Answer: B

QUESTION: 3

An integration developer needs to check which Common Event Infrastructure (CEI) events have been generated for a business process and review the information contained inside each event. Where will the integration developer find this information?

- A. In the Common Base Event browser application.
- B. In the monitoring widgets in Business Space.
- C. In the administrative console -> Service Integration -> Common Event Infrastructure -> Event Service
- D. In the Business Process Choreographer Explorer -> Views tab -> Process Instances -> Events generated

Answer: A

QUESTION: 4

An integration developer has configured a business state machine, as shown below:

What behavior will the integration developer observe when executing the flow?

- A. If Condition3 is false, then Exit1 will execute after Timeout2 expires.
- B. If Condition1 and Condition2 are both true, then a runtime exception will be thrown.
- C. If Condition1 is false, then Timeout1 will not be evaluated.
- D. If Condition1 and Condition2 are both false, then operation2 will be called by the business state machine.

Answer: A

QUESTION: 5

An integration developer has configured a BPEL business process for a customer, as shown below:

Execution of iterations: Sequential Parallel

Index-Variable Name:

▼ **Iteration**

Define the bounds of the range to iterate over by specifying an iteration type.

Type:

Start Expression:

Expression Language:

Expression Type: Visual Java

```
return min;
```

End Expression:

Expression Language:

Expression Type: Visual Java

```
return max;
```

▼ **Early Exit Criterion**

Define when to exit the iteration.

Type:

Count successful iterations only

Assume that max is greater than min. What should the integration developer take into account when implementing this for each loop?

- A. There must be an array associated with the for each loop.
- B. It is possible to exit the loop before Index is equal to max.
- C. The values of min and max cannot be changed once the for each activity begins.
- D. If the scope inside of the for each activity is set to isolated, then the activities will run sequentially.

Answer: D

QUESTION: 6

A client requires that a new BPEL process return a fault message to the requester in case the process does not complete correctly. The integration developer has added a fault handler to the process to catch all exceptions. How should the integration developer return the fault message?

- A. Use a throw activity of a business fault.
- B. Use a reply activity using a standard fault.
- C. Use a reply activity using a business fault defined in the interface.

D. Use a rethrow activity in the fault handler on the process scope using a fault defined in the interface.

Answer: C

QUESTION: 7

An integration developer needs to rewrite business rule logic written in Java using a business rule component. The integration developer has implemented the selector shown in the exhibits below.

General

Interfaces

- SelectorInterface
 - getApproval

Scheduled Component

Default Component: *Enter SCA Component*

Start Date	End Date	Component
Jan 1, 2012 12:00 AM	Dec 31, 2012 12:59 PM	JavaComponent
Jan 1, 2013 12:00 AM	Dec 31, 2013 12:59 PM	BusinessRuleComponent

Selection Criteria: Current date

What behavior will the integration developer observe with the configured selector?

- A. The module will fail to compile because there is no wiring between the selector and the destination components.
- B. The module will fail to compile because the destination of the selector can only be rule logic or decision table.
- C. The runtime exception will be thrown because there is no default component configured.
- D. The runtime exception will be thrown if the date when the selector is invoked does not fall in any of the specified date ranges.

Answer: D

QUESTION: 8

An integration developer has configured a BPEL business process for a customer, as shown below:

What should the integration developer consider when implementing this flow?

- A. An Otherwise element must be added to the Choice activity.
- B. A Timeout element must be added to the ReceiveChoice activity.
- C. It is possible for Snippet1 and Snippet2 to run concurrently in the same instance of the process.
- D. If Snippet1 is invoked in an instance of the process, that instance will not receive messages sent to the Service2 interface.

Answer: D

QUESTION: 9

A business analyst has made several runtime changes to deployed business rules that were implemented in IBM Integration Designer (IID). Which task should the integration developer perform so that the rule group can be imported using IID, and the changes are reflected in the project source?

- A. Use the administrative console to export the rule group.
- B. Use the Business Rule Manager application to export the rule group.
- C. Use the Business Rules widget in Business Space to export the rule group.
- D. Use the Business Process Choreographer (BPC) Explorer to export the rule group information.

Answer: A

QUESTION: 10

An integration developer has configured a BPEL business process for a customer, as shown below:

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
