000-341

IBM

WebSphere Application Server V5.0, Multiplatform Administration

<http://www.ipass4sure.com/exams.asp?examcode=000-341>

The 000-341 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-341 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-341 exam is very challenging, but with our 000-341 questions and answers practice exam, you can feel confident in obtaining your success on the 000-341 exam on your FIRST TRY!

IBM 000-341 Exam Features

- Detailed questions and answers for 000-341 exam
- Try a demo before buying any IBM exam
- 000-341 questions and answers, updated regularly
- Verified 000-341 answers by Experts and bear almost 100% accuracy
- 000-341 tested and verified before publishing
- 000-341 exam questions with exhibits
- 000-341 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-341 exam are now continuously updating and accepting this challenge is itself a task. This 000-341 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-341 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-341 Test and save time and money while developing your skills to pass your IBM 000-341 Exam? Let us help you climb that ladder of success and pass your 000-341 now!

QUESTION 1:

Upon monitoring an application it is found that the passivation and activation counters for EJBs are extremely high. What is the BEST change to be made to the server configuration to improve EJB subsystem performance?

- A. Increase the JVH heap size
- B. Increase the EJB cache size
- C. Increase the EJB cache cleanup interval
- D. Increase the maximum ORB service connector cache size

Answer: B

QUESTION 2:

A Web application is suspected to have a (concurrent access) synchronization problem. Which PMI modules should be monitored to try and isolate the performance problem?

- A. Dynamic cache
- B. J2C connectors
- C. Web applications
- D. JVM runtime
- E. Web container thread pools

Answer: C.E

QUESTION 3:

A high volume application in a clustered environment uses only local sessions. Occasionally a request having session affinity is routed to an alternative application server. This happens even when the application server with affinity does not fail. What is the most likely contributing factor?

- A. The session time-out value is set too high
- B. The session cache size is configured to be too small.
- C. The web container thread pool for the application is too small on each server.
- D. It is the nature for session affinity with local only sessions.

Answer: C

QUESTION 4:

What should an administrator guarantee to ensure that the following command performs as expected when run on the deployment manager node? BackupConfig cellBackup -nonstop

- A. All application code must be present on the deployment manager node.
- B. No configuration changes should be made while the command executes.
- C. The command should be preceded by a syncNode command from the deployment manager node.
- D. The file cellBackup does not already exist.

Answer: B

QUESTION 5:

Concurrent access to HttpSession objects is possible in a certain application. The BEST approach for the system administrator to make this behavior safe involves:

- A. Checking the "Allow serial access" session management property for the installed enterprise application.
- B. Checking the "Allow serial access" session management property for the application server on which the application is installed.
- C. Checking the "Allow overflow" session management property for the installed enterprise application.
- D. Having the developer mark all application methods that access the session as synchronized.

Answer: A

QUESTION 6:

An enterprise application has an execution profile where 50% of the HTTP requests hit the EJB layer. Which pair of application server settings best fit this application profile? L. Maximum web container thread pool size = 25 II. Maximum web container thread pool size = 50 III. Maximum ORB service thread pool size = 25 IV. Maximum ORB service thread pool size = 50 V. maximum EJB cache size = 25 VI. Maximum EJB cache size = 50

- A. I and IV
- B. I and III
- C. II and III
- D. II and V
- E. III and VI

Answer: C

QUESTION 7:

Which of the following manual tasks may need to be carried out before distributing plugin-cfg.xml to web server machines?

- A. Edit plugin-cfg.xml Virtual Host names to coincide with the virtual host name defined within

the corresponding web server.

- B. Edit plugin-cfg.xml absolute file paths to reflect the web server's local filesystem.
- C. Generate the keyring and stashfile if using SSL between the plug-in and application servers.
- D. Update the domain suffix for each virtual host in plugin-cfg.xml.

Answer: B.C

QUESTION 8:

During a stress test on an application, it was found that there was a large number of prepared statement discards associated with one Datasource. All other metrics were within expected range. The BEST way to increase performance of this application is to make what change to the Datasource properties?

- A. Increase the statement cache size
- B. Increase the minimum connections.
- C. Increase the maximum connections.
- D. Change the purge policy to "Entire Pool".

Answer: A

QUESTION 9:

An application server is closing HTTP connections prematurely. Assuming that MaxKeepAliveConnections is already set at 90% of the maximum number of threads in the Web container thread pool, what Web container setting should be modified to improve this situation?

- A. Set the MaxKeepAliveRequests property to a sufficient value.
- B. Set the MaxKeepAliveConnections property to a sufficient value.
- C. Increase the Web container thread pool maximum size.
- D. Increase the ORB service thread pool maximum size.

Answer: A

QUESTION 10:

What would be the practical consideration for creating smaller application servers each running one different web application rather than a single large application server for an application architecture?

- A. The aggregated plug-in config file will contain less complex URIs.
- B. Multiple smaller servers provide better application isolation.
- C. There will be a decrease in response time due to interprocess RMI/IIOP calls
- D. Multiple smaller servers eliminate single points of failure.

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
