000-529

IBM

WebSphere ILOG JRules V7.0, Application Development

<http://www.ipass4sure.com/exams.asp?examcode=000-529>

The 000-529 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 000-529 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 000-529 exam is very challenging, but with our 000-529 questions and answers practice exam, you can feel confident in obtaining your success on the 000-529 exam on your FIRST TRY!

IBM 000-529 Exam Features

- Detailed questions and answers for 000-529 exam
- Try a demo before buying any IBM exam
- 000-529 questions and answers, updated regularly
- Verified 000-529 answers by Experts and bear almost 100% accuracy
- 000-529 tested and verified before publishing
- 000-529 exam questions with exhibits
- 000-529 same questions as real exam with multiple choice options

Acquiring IBM certifications are becoming a huge task in the field of I.T. More over these exams like 000-529 exam are now continuously updating and accepting this challenge is itself a task. This 000-529 test is an important part of IBM certifications. We have the resources to prepare you for this. The 000-529 exam is essential and core part of IBM certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 000-529 Test and save time and money while developing your skills to pass your IBM 000-529 Exam? Let us help you climb that ladder of success and pass your 000-529 now!

Exam Name:	WebSphere ILOG JRules V7.0, Application Development		
Exam Type:	IBM	Exam Code:	000-529
Certification:	IBM WebSphere	Total Questions:	53

Question: 1

The Business Analyst has discovered a large number of business rules. The object model and vocabulary is the same for all those rules. The Rule Developer wants to organize the structure of the rules to work on them independently and make them more manageable. Which approach should be used to accomplish this?

- A. Write the rules in several Rule Projects. Create a Rule Project containing the BOM and reference it from the others.
- B. Write all the rules in a unique Rule Project. All the rules of a business rule application must be in a single Rule Project containing a single BOM.
- C. Organize the rules into several Rule Projects in the same workspace. All Rule Projects created in the same Eclipse workspace share the BOM by default.
- D. Organize the rules into several Rule Projects and replicate the BOM in each Rule Project. Any Rule Project has to have its own BOM because it is mandatory in the tool.

Answer: A

Question: 2

A rule set is owned by two different teams: product management and marketing. The Rule Developer must use an industry standard defining a XML schema as the data model with at least 300 classes. Each team should have access to only their authorized elements of the rule set and only the part of the vocabulary needed to write their rules. To avoid an overcomplicated BOM, the Rule Developer wants to use JRules capabilities to expose only the necessary elements to the Rule Writer. Which approach uses these capabilities?

- A.
 1. Design the BOM on top of the XSD.
 2. Use the virtual element and the B2X layer to simplify the vocabulary.
 3. Add categories to the rule project.
 4. Assign category to each BOM element.
 5. Use filter on category at each rule to expose only the necessary vocabulary.
- B.
 1. Design the BOM on top of the XSD.
 2. Develop two BOM entries one for each team.
 3. Use the virtual element and the B2X layer to simplify the vocabulary.
 4. Add a category to the BOM to expose only the necessary vocabulary.
- C.
 1. Change the XSD to have only the complex type for the marketing and the product management.
 2. Design the BOM on top of these new XSDs, one entry per XSD.
 3. Write rules using the available vocabulary.
- D.
 1. Design a Java model wrapper around the XSD to access only elements relevant for the rules.
 2. Build the BOM on top of this Java model.
 3. Write rules using the available vocabulary.

Answer: A

Question: 3

The business users define three types of insurance policy: home, life, and car policy. The XML schema defines a unique policy with a Type attribute. The Rule Developer needs to develop an efficient vocabulary to let business users write the rules. Which action should the Rule Developer perform to make an efficient BOM design, identifying the three policies as distinct terms?

- A. Define a rule set variable for each type of policy and initialize them at the beginning of the rule flow.
- B. Add a BOM class for each policy type in the BOM entry and use the BOM to XOM tester to compare the type of policy.
- C. Change the XML schema to define one complex type for each type of policy, then update the BOM entry using this schema.

Exam Name:	WebSphere ILOG JRules V7.0, Application Development		
Exam Type:	IBM	Exam Code:	000-529
Certification:	IBM WebSphere	Total Questions:	53

D. Extend the XML complex type with Java classes for each type of policy, and then define BOM entries using both the schema and the Java model.

Answer: B

Question: 4

The claim processing application is using web service to support the coverage verification decision point. The BPM product sends XML document to this service. The implementation of this service is using the Rules XML binding. The Rule Developer is using the XML binding capability to build a BOM from the given schema. The complex type defining the claim includes an element called dateOfService of type xsd: date Time. Once the BOM was created using the dynamic binding approach how will this attribute be mapped in the BOM class?

- A. Publicjava.util.Date dateOfService;
- B. Publicilog.rules.xml.types.IlrCalendarDate;
- C. Publicjavax.xml.datatype.XMLGregorianCalendar;
- D. Publicilog.rules.xml.types.IlrDateTime dateOfService;

Answer: D

Question: 5

In a Wireless Telecom provider the Service Level Agreement (SLA) policy defines the following business policy: "A customer service request must be brought to the attention of a supervisor if the request is not resolved within 4 hours". Where the policy should be implemented?

- A. In a BRMS
- B. In a process flow
- C. In the Data Model
- D. In a SQL procedure
- E. In the application code
- F. In a Graphical User Interface

Answer: B

Question: 6

The development team decided to merge two rule sets: the validation and the eligibility rule sets because those were always executed in sequence in the decision points. A new rule project, loan-rules, was created and references both the validation and eligibility rules respectively contained in the validation-rules and eligibility-rules rule projects. The new "merged" rule set will be extracted from this rule project. validation-rules and eligibility rules both have a rule flow with a main flow task property set to true. A main rule flow called ilrmain is created in loan-rules and use Sub flow Tasks to references theruleflows of validation-rules and eligibility-rules. What is missing, if anything, in order to orchestrate the execution of loan-rules?

- A. Nothing is missing because Arul flow called ilrmain is always executed first.
- B. The mainruleflow name, ilrmain, needs to be specified in the code that invokes the rule set execution.
- C. The main flow task property needs to be set to true forilrmain and to false for all the other rule flows.
- D. All theruleflows that are used in the rule set need to be referenced in the rule set properties and it is possible to specify the main rule flow for the execution in these properties.

Answer: C

Pass4sure Certification Exam Features;

- Pass4sure offers over **2500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **120** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
