SCO

UNIXWARE 7 NONSTOP CLUSTERS CERTIFICATION EXAM V1.0a0

The 090-091 practice exam is written and formatted by Certified Senior IT Professionals working in today's prospering companies and data centers all over the world! The 090-091 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 090-091 exam is very challenging, but with our 090-091 questions and answers practice exam, you can feel confident in obtaining your success on the 090-091 exam on your FIRST TRY!

SCO 090-091 Exam Features

- Detailed questions and answers for 090-091 exam
- Try a demo before buying any SCO exam
- 090-091 questions and answers, updated regularly
- Verified 090-091 answers by Experts and bear almost 100% accuracy
- 090-091 tested and verified before publishing
- 090-091 exam questions with exhibits
- 090-091 same questions as real exam with multiple choice options

Acquiring SCO certifications are becoming a huge task in the field of I.T. More over these exams like 090-091 exam are now continuously updating and accepting this challenge is itself a task. This 090-091 test is an important part of SCO certifications. We have the resources to prepare you for this. The 090-091 exam is essential and core part of SCO certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 090-091 Test and save time and money while developing your skills to pass your SCO 090-091 Exam? Let us help you climb that ladder of success and pass your 090-091 now!

QUESTION: 1

Which statement best describes how SSI is implemented in filesystems on UnixWare 7 NonStop Clusters?

- A. Through the cluster filesystem (CFS), which provides a global view of all filesystems in a single file tree and allows them to be protected for failover.
- B. Through a modified version of NFS sharing mounts in a special, transparent, inter-node manner.
- C. Through a modified version of RFS sharing mounts in a special, transparent, inter-node manner.
- D. Not at all.

Answer: A

QUESTION: 2

You should choose CNM as your protected storage method when:

- A. You want the fastest possible disk I/O performance
- B. You want the lowest-possible window of vulnerability when a node fails
- C. You are willing and able to accept the slower write performance and greater window of vulnerability to reduce the price of the cluster
- D. You dont care about the price of the cluster

Answer: C

QUESTION: 3

In UnixWare 7 NonStop Clusters, which resources do NOT need to be protected to prevent unavailability of the cluster in the event the resource fails?

- A. Filesystems, except the boot (/stand) filesystem for each node
- B. Shared memory
- C. Semaphores
- D. Video monitors

Answer: D

QUESTION: 4

In clustering, a protected resource is one that:

- A. Has special circuits that keep it from being damaged during a voltage surge
- B. Is monitored by special hardware such that if it should fail, support engineers will be notified immediately that it needs to be replaced
- C. Is monitored by special software to insure that it is not over-used
- D. Is redundant in a cluster to avoid a single point of failure (SPF) and is automatically pressed into service by the cluster in the event the primary component fails

Answer: D

QUESTION: 5

The key to reliability and availability in a cluster is:

- A. Having lots of spare parts on hand so that if something fails, it can be quickly replaced, causing minimal down time.
- B. Having a hardware design that avoids any single point of failure, and a fault-tolerant operating system that knows how to press redundant hardware into service automatically.
- C. Staffing the computer system with knowledgeable technicians 24x7.
- D. Using the right monolithic computer system.

Answer: B

QUESTION: 6

What is the maximum distance you can run long-wave FDDI cables without any signal modification?

- A. 2 kilometers
- B. 10 kilometers
- C. 2 miles
- D. 10 miles

Answer: A

QUESTION: 7

Which statement best describes the term N+1 failover configuration for nodes?

- A. All resources but one are pressed into service. Loss of a single resource causes failover to another resource, preserving performance.
- B. All resources but one are always pressed into service. Loss of a second resource causes the cluster to become unavailable.
- C. N+1 is a hardware-specific concept that indicates how to configure disks in a node.
- D. N+1 is a software-specific concept that indicates how to configure daemon failover on a node.

Answer: A

QUESTION: 8

Which statement best defines a node within a cluster?

- A. A complete computer (RAM, CPU, disk(s)), connected to the other nodes in the cluster by way of a server area network (SAN)
- B. The SAN cards placed in each machine in a cluster
- C. The LAN cards placed in each machine in a cluster
- D. A computer connected to the other nodes in the cluster by way of a LAN, which contains only CPUs, RAM, LAN, and SAN cards, no other peripherals

Answer: A

QUESTION: 9

Which of the following licenses apply on a cluster-wide basis, as opposed to per-node?

- A. CPUs
- B. RAM
- C. Users
- D. Departmental/Enterprise

Answer: C

Pass4sure Certification Exam Features;

- Pass4sure offers over **4500** Certification exams for professionals.
- More than **98,800** Satisfied Customers Worldwide.
- Average **99.8%** Success Rate.
- Over **150** Global Certification Vendors Covered.
- Services of **Professional & Certified Experts** available via support.
- Free **90 days** updates to match real exam scenarios.
- **Instant Download Access!** No Setup required.
- Price as low as **\$19**, which is 80% more **cost effective** than others.
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions / Answers are downloadable in **PDF** format.
- Mobile Device Supported (**Android, iPhone, iPod, iPad**)
- **No authorization** code required to open exam.
- **Portable** anywhere.
- **Guaranteed Success.**
- **Fast**, helpful support **24x7**.
