- A. Frozen
- B. Imported
- C. Active
- D. Available
- E. Inactive

**Answer: A, B**

**QUESTION: 4**

An administrator has created three BasicDisk storage units within the NetBackup Administration Console (STU-A, STU-B, and STU-C). The administrator needs to create a backup policy that evenly rotates use of each of these storage units during backup. How can the policies or storage units be set up to accomplish this?

- A. set up each of the policies to use "Any Available" storage unit
- B. set up a storage unit group for these STUs and select "Failover" option for storage unit selection
- C. set up a storage unit group for these STUs and select "Least recently selected storage unit" option
- D. set up a storage unit group for these STUs and select "Choose storage units based on order specified above" option

**Answer: C**

**QUESTION: 5**

An organization has Symantec NetBackup 7.0 client machines with a large number of files distributed across multiple file systems that are being backed up to a library with high-speed tape drives. Which two steps should the administrator take to ensure the greatest number of backup streams are active concurrently? (Select two.)

- A. select the "Enable multiple data streams" policy attribute and edit the "Maximum jobs per client" master server host property
- B. create a "Media Server Load Balancing" type storage unit group to enable additional backup streams to become active simultaneously
- C. enable the client-side deduplication feature so that only unique data is sent from the client to the media server
- D. select the Enable multiplexing attribute within the storage unit and the policy schedule
- E. configure the "Max drives this master" attribute to the number of tape drives that are available within the library

**Answer: A, D**

**QUESTION: 6**

Where are exclude list configurations stored?

- A. media server

- B. master server
- C. client
- D. Enterprise Media Manager (EMM) server
