70-332
Microsoft
Advanced Solutions of Microsoft SharePoint Server 2013

The 70-332 practice exam is written and formatted by Certified Senior IT Professionals working in today’s prospering companies and data centers all over the world! The 70-332 Practice Test covers all the exam topics and objectives and will prepare you for success quickly and efficiently. The 70-332 exam is very challenging, but with our 70-332 questions and answers practice exam, you can feel confident in obtaining your success on the 70-332 exam on your FIRST TRY!

Microsoft 70-332 Exam Features

- Detailed questions and answers for 70-332 exam
- Try a demo before buying any Microsoft exam
- 70-332 questions and answers, updated regularly
- Verified 70-332 answers by Experts and bear almost 100% accuracy
- 70-332 tested and verified before publishing
- 70-332 exam questions with exhibits
- 70-332 same questions as real exam with multiple choice options

Acquiring Microsoft certifications are becoming a huge task in the field of I.T. More over these exams like 70-332 exam are now continuously updating and accepting this challenge is itself a task. This 70-332 test is an important part of Microsoft certifications. We have the resources to prepare you for this. The 70-332 exam is essential and core part of Microsoft certifications and once you clear the exam you will be able to solve the real life problems yourself. Want to take advantage of the Real 70-332 Test and save time and money while developing your skills to pass your Microsoft 70-332 Exam? Let us help you climb that ladder of success and pass your 70-332 now!

Exam Questions & Answers

Section 1: Section One (1 to 12)
Details: Topic 1, Tailspin Toys

Section 2: Section Two (13 to 19)
Details: Topic 2, World Wide Importers

Section 3: Section Three (20 to 27)
Details: Topic 3, Baldwin Museum of Science

Section 4: Section Four (28 to 37)
Details: Topic 4, Prosware, Inc

Section 5: Section Five (38 to 46)
Details: Topic 5, Contoso Ltd

Section 6: Section Six (47 to Onward)
Details: Topic 6, Mix Questions
Section 1: Sec One (1 to 12)
Details: Topic 1, Tailspin Toys
Background
You are planning a SharePoint deployment. The new farm will host several business solutions including:
- www.TailspinToys.com
- Tailspin360.TailspinToys.com
- MyTailspin.TailspinToys.com
All employees have Active Directory Domain Service (AD DS) accounts. Members of the SalesUsers AD DS security group are the only users with permissions to create My Sites sites.

Business Requirements
www.TailspinToys.com
www.TailspinToys.com is an Internet business site that will provide eCommerce capabilities including a product catalog, a shopping cart, and an account settings page.
Tailspin360.TailspinToys.com
Tailspin360.TailspinToys.com provides a business intelligence (BI) solution for the Sales team. It must allow users to share Microsoft Excel workbooks and build dashboards.
Tailspin360.TailspinToys.com accesses data that is located in various repositories including Microsoft SQL Server.
MyTailspin.TailspinToys.com
MyTailspin.TailspinToys.com is a social collaboration environment that provides micro-blogging, file and video sharing, and the ability to create personal blogs and wikis for Tailspin Toys employees.

Technical Requirements
General
- The farm must be made fault tolerant by using virtualization.
- The farm must include two front-end web servers.
- Page requests must be distributed equally across the front-end web servers.
- All content must remain available to users if one of the front-end web servers becomes unavailable.
- All Sales department employees are members of the SalesUsers group.
- All customer, order, and product information will be stored in tables in a Microsoft SQL Server database.
- The User Profile service application is provisioned but not configured.
www.TailspinToys.com
- You must create a version of the site that provides an optimized experience for Windows Phone devices. You have created a device channel that detects the user-agent.
- The website must support English (United States), Spanish (Mexico), and German (Germany). All content is authored in English and then translated into Spanish and German by an outside vendor. Translations are performed by humans.
Tailspin360.TailspinToys.com
- The site must be accessible only to members of the Sales team.
- Users must be able to access order information that is stored in a SQL Server database.
- Developers must be able to import Business Connectivity Services (BCS) models by using Central Administration.
- The salesAccess shared domain account has permissions to read data from the database.
- Excel workbooks published to a document library app must be opened in a browser. Excel workbooks in other locations must open in Excel.

MyTailspin.TailspinToys.com
- You need to provision a SharePoint environment that supports My Sites for an enterprise.
- You need to ensure the SharePoint Server configuration supports the ability to create individual site collections the first time a user accesses the My Site page.
- All users need permissions to create My Sites sites.

QUESTION: 1

You need to meet the site collection creation requirements for MyTailspin.TailspinToys.com. Which steps should you take? (Each correct answer presents part of the solution. Choose all that apply.)

A. Ensure that the Setup My Sites setting for the User Profile service application uses the URL of the My Site host site collection and a wildcard inclusion.
B. Ensure that the Setup My Sites setting for the User Profile service application uses the URL of the My Site host site collection and an explicit inclusion.
C. Grant the Create Subsites permission to each user.
D. Grant the Create Personal Sites permission to each user.

Answer: B, C

Explanation:
B: Explicit Inclusion: it is a managed path under which no further site collection can be created. By default MOSS has a root as an explicit inclusion. No further inclusion can be created manually. So as per my requirement I have to create site collection directly under abc.com. so first I will use root explicit inclusion to create my first ever site collection http://abc.com/. and then I will create another explicit inclusion “/Learning” and then I have a site collection with url as http://abc.com/learning.
C: You need Full Control or Manage Hierarchy permissions to create a subsite, by default. You can create/modify a permission level - which will give you the opportunity to allow contributors for instance, to create subsites.

Note:
* From scenario: All users need permissions to create My Sites sites.
* Managed path is a concept given by Microsoft to create different site collection according to different requirement. It is a path managed by SharePoint which will specify how many site collection can reside in a particular url. SharePoint has two type of managed paths:
  Explicit Inclusion Wildcard Inclusion Incorrect:
A: Wildcard Inclusion: It is managed path under which n number of site collection can be created. By default MOSS has sites as only wildcard inclusion. N no of inclusion can be created manually So as per my requirement I have to create 2 site collection under which number of site and site collection can reside .So with this requirement I will create an wildcard inclusion with name /HR and /Finance and the url for that will be http://abc.com/HR and http://abc.com/finance and now I have n no of site collection under /finance and /HR. ex. /HR/dep1 & /HR/dep2

**QUESTION:** 2
DRAG DROP
You need to configure authentication for the Tailspin360.TailspinToys.com site. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)
Create a new Secure Store target application named **Sales**. Specify a target application ID of **SalesReports** and a target application type of **Group**.

Add the **SalesUsers** group as a member of the Secure Store target application. Configure the **Set Credentials** option of the Secure Store target application to use the salesAccess account.

Specify the **Target Application ID** for the **Secure Store Service (SSS)** field in the Excel Services authentication settings.

Specify the **Friendly Name** for the **Secure Store Service (SSS)** field in the Excel Services authentication settings.

Create a new Secure Store target application named **Sales**. Specify a target application ID of **SalesReports** and a target application type of **Individual**.

Add the salesAccess account as a member of the Secure Store target application. Configure the **Set Credentials** option of the Secure Store target application to use the **SalesUsers** group.

**Answer:**
Explanation:
Secure Store Target Application
Box 1:
Create a new Secure Store target application named **Sales**. Specify a target application ID of **SalesReports** and a target application type of **Group**.

**Box 2:**

Add the **SalesUsers** group as a member of the Secure Store target application. Configure the **Set Credentials** option of the Secure Store target application to use the salesAccess account.

**Box 3:**

Specify the **Target Application ID** for the **Secure Store Service (SSS)** field in the Excel Services authentication settings.

**Note:**

* Step 1:
/ Target Application Type. By default, SharePoint Online uses type Group Restricted.
/ In the Members section, enter a list of users or SharePoint Online groups of users who need to access the target application. Or, you can use the Browse button to search for the name of a group that you want to map to the Target Application.

* Step 2:
In the Credential Fields section, enter the Field Names and Field Types for the credentials that are required to access data in the Target Application. These fields determine how you will map identity in the Secure Store Service. By default, the Credential Fields list the Windows User Name and Windows Password with
matching Field Types (User Name and Password), and specifies that the password is masked.

* Step 3:
If you are using Excel Services, use the procedures in this section to complete the necessary configuration steps.
If the Unattended Service Account has not already been configured for Excel Services, follow these steps to configure it.
To configure the Unattended Service Account
On the SharePoint Central Administration home page, under Application Management, click
Manage Service Applications.
Click the Excel Services service application. Click Global Settings.
In the External Data section, choose the Use an existing Unattended Service Account option, and then type the name of the target application that you created for the Unattended Service Account in the Target Application ID text box.
Click OK.

* From scenario:
/ The site must be accessible only to members of the Sales team.
/ The salesAccess shared domain account has permissions to read data from the database.
/ Excel workbooks published to a document library app must be opened in a browser. Excel workbooks in other locations must open in Excel.
* The Secure Store Service is designed to create a background mapping between a group of users in SharePoint, and a single user known to the external data system. When the Secure Store Service is properly configured, the following occurs:
* A user authenticates through Internet Information Services (the web server technology underlying SharePoint technologies) to SharePoint Online via valid credentials.
* Inside SharePoint Online, the Secure Store Service uses mapped credentials known to the external business application to render any necessary external data on the site for the authenticated user.

**QUESTION:**
3
DRAG DROP
You need to ensure that the site supports the required languages. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)
Create one label. Set the **Locale** to **German (Germany)** and the **Variation Home** to `/`.

Create one label. Set the **Locale** to **Spanish (Mexico)** and the **Variation Home** to `/`.

Create two labels. Set the **Locale** for one label to **German (Germany)** and for the other label to **Spanish (Mexico)**.

Edit the **Spanish (Mexico)** label. Set the **Machine Translation** setting to **Allow Machine Translation on this target label**.

Create one label. Set the **Locale** to **English (United States)** and the **Variation Home** to `/`.

Create language hierarchies.

Edit the **German (Germany)** label. Set the **Machine Translation** setting to **Allow Machine Translation on this target label**.

**Answer:**
Explanation:

Box 1:

Create one label. Set the Locale to **English (United States)** and the Variation Home to `/`.  

Box 2:

Create two labels. Set the **Locale** for one label to **German (Germany)** and for the other label to **Spanish (Mexico)**.

Edit the **Spanish (Mexico)** label. Set the **Machine Translation** setting to **Allow Machine Translation on this target label**.

Create one label. Set the **Locale** to **English (United States)** and the Variation Home to `/`.

Create language hierarchies.

Edit the **German (Germany)** label. Set the **Machine Translation** setting to **Allow Machine Translation on this target label**.
Box 3:

Create two labels. Set the Locale for one label to German (Germany) and for the other label to Spanish (Mexico).

Note:
*(step 1) (Specify source variation site) Variation Home – this is the starting point for your multilingual web site; in theory the value here should be “/” (root). Now open the Variation Label link and create a the Source Variation Label (in my example this is English, so the value for the Site Template Language drop down is English). Please check the Set this variation to be the source variation checkbox under Source Hierarchy and choose wisely the Publishing site template which you want to use for the variations. This setting cannot be change afterwards. Click OK.
* (Step 2) Specify target variation sites
* (step 3) Content deployment
Content deployment copies content from a source site collection to a destination site collection. We recommend that you disable any content deployment jobs that include the source variation site while Variations Create Hierarchies Job Definition runs.
* From scenario:
The website must support English (United States), Spanish (Mexico), and German (Germany). All content is authored in English and then translated into Spanish and German by an outside vendor. Translations are performed by humans.
* The variations feature in SharePoint Server 2013 and SharePoint Online makes content available to specific audiences on different sites by syncing content from a source variation site to each target variation site. Content on a target variation site can be translated into other languages before it is published. Variations can be used only on sites that are created by using one of the Publishing site templates, or on a site for which the SharePoint Server Publishing Infrastructure feature was activated.
