0B0-108

BEA

BEA 9 Certified Administrator:System Adminstration Exam

Thousands of IT Professionals before you have already passed their 0B0-108 certification exams using the BEA 0B0-108 Practice Exam from ipass4sure.com. Once you start using our 0B0-108 exam questions you simply can't stop! You are guaranteed to pass your BEA 0B0-108 test with ease and in your first attempt.

Here's what you can expect from the ipass4sure BEA 0B0-108 course:

* Up-to-Date BEA 0B0-108 questions designed to familiarize you with the real exam.
* 100% correct BEA 0B0-108 answers you simply can't find in other 0B0-108 courses.
* All of our tests are easy to download. Your file will be saved as a 0B0-108 PDF.
* BEA 0B0-108 brain dump free content featuring the real 0B0-108 test questions.

BEA 0B0-108 Certification Exam is of core importance both in your Professional life and BEA Certification Path. With BEA Certification you can get a good job easily in the market and get on your path for success. Professionals who passed BEA 0B0-108 Certification Exam are an absolute favorite in the industry. If you pass BEA 0B0-108 Certification Exam then career opportunities are open for you.

Our 0B0-108 Questions & Answers provide you an easy solution to your BEA 0B0-108 Exam Preparation. Our 0B0-108 Q&As contains the most updated BEA 0B0-108 real tests. You can use our 0B0-108 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

Question: 1
Scenario:
You have made the decision to migrate all your operations onto WebLogic Server. An application has been chosen from each department for the initial phase of migration one from each of Sales, Marketing, Accounts, and Customer Service. The applications will be deployed as individual EAR files to a cluster of WebLogic Server 9.x instances, each with a pool of connections to an Oracle 10g database that provides corporate and departmental data services. The database team hopes to upgrade the database to use Oracle RAC (Real Application Clusters) shortly, which will require you to configure multiple sets of connections. Connectivity to the existing Service Engineer Dispatch system is via a JMS message bridge. When a service engineer calls in with a report, a message is sent via JMS to the Customer Service application deployed in WebLogic Server. The customer record in the Customer Service database must be updated with details from the message. It is important that the message is not lost because the call management system is not able to resend messages. To address this, the Customer Service application is accessing a persistent JMS Queue using an XA compatible connection factory.

In the future, each department will have its own schema within the Oracle database and the developers are writing their code with this in mind. However, for now, it has been decided to store all data in a single, company-wide schema. Which of the following approaches will make a future move to multiple schema simple, while making the most efficient use of resources today?
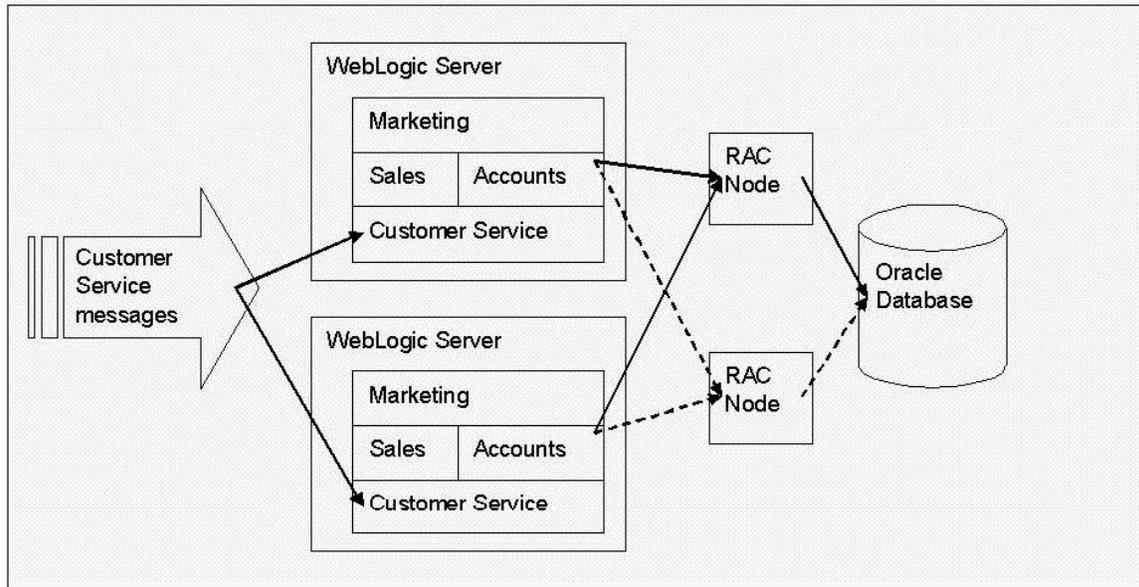

A. Deploy an application-scoped Data Source module with each application.
B. Deploy a Data Source system module and assign it multiple JNDI names.
C. Deploy each department's application to its own WebLogic server.
D. Deploy a Data Source system module for each department's application.

Answer: B

Question: 2
Scenario:
You have made the decision to migrate all your operations onto WebLogic Server. An application has been chosen from each department for the initial phase of migration one from each of Sales, Marketing, Accounts, and Customer Service. The applications will be deployed as individual EAR files to a cluster of WebLogic Server 9.x instances, each with a pool of connections to an Oracle

10g database that provides corporate and departmental data services. The database team hopes to upgrade the database to use Oracle RAC (Real Application Clusters) shortly, which will require you to configure multiple sets of connections. Connectivity to the existing Service Engineer Dispatch system is via a JMS message bridge. When a service engineer calls in with a report, a message is sent via JMS to the Customer Service application deployed in WebLogic Server. The customer record in the Customer Service database must be updated with details from the message. It is important that the message is not lost because the call management system is not able to resend messages. To address this, the Customer Service application is accessing a persistent JMS Queue using an XA compatible connection factory.

Before deploying it into the test environment, you review the configuration of the Sales department's Enterprise Application, which is meant to contain a JDBC Application Module ?you are concerned that it may not have been built correctly. Most of an application's deployment descriptors only reference the JDBC module using a JNDI name. Which file listed below is the only one that refers directly to the JDBC Application Module file?

A. config.xml
B. application.xml
C. weblogic-ejb-jar.xml
D. weblogic-application.xml

Answer: D

Question: 3
Scenario:
You have made the decision to migrate all your operations onto WebLogic Server. An application has been chosen from each department for the initial phase of migration one from each of Sales, Marketing, Accounts, and Customer Service. The applications will be deployed as individual EAR files to a cluster of WebLogic Server 9.x instances, each with a pool of connections to an Oracle 10g database that provides corporate and departmental data services. The database team hopes to upgrade the database to use Oracle RAC (Real Application Clusters) shortly, which will require you to configure multiple sets of connections. Connectivity to the existing Service Engineer Dispatch system is via a JMS message bridge. When a service engineer calls in with a report, a message is sent via JMS to the Customer Service application deployed in WebLogic Server. The
