

E20-590

EMC

Backup and Recovery Specialist Exam

Thousands of IT Professionals before you have already passed their E20-590 certification exams using the EMC E20-590 Practice Exam from ipass4sure.com. Once you start using our E20-590 exam questions you simply can't stop! You are guaranteed to pass your EMC E20-590 test with ease and in your first attempt.

Here's what you can expect from the [ipass4sure](http://ipass4sure.com) EMC E20-590 course:

- * Up-to-Date EMC E20-590 questions designed to familiarize you with the real exam.
- * 100% correct EMC E20-590 answers you simply can't find in other E20-590 courses.
- * All of our tests are easy to download. Your file will be saved as a E20-590 PDF.
- * EMC E20-590 brain dump free content featuring the real E20-590 test questions.

EMC E20-590 Certification Exam is of core importance both in your Professional life and EMC Certification Path. With EMC Certification you can get a good job easily in the market and get on your path for success. Professionals who passed EMC E20-590 Certification Exam are an absolute favorite in the industry. If you pass EMC E20-590 Certification Exam then career opportunities are open for you.

Our E20-590 Questions & Answers provide you an easy solution to your EMC E20-590 Exam Preparation. Our E20-590 Q&As contains the most updated EMC E20-590 real tests. You can use our E20-590 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

Question: 1

A NetWorker server manages three tape drives. Server parallelism is set to 24. All save sets are directed to the Default pool. During a group backup, 16 save sessions are started. If each device resource has a Target Sessions value of 4, which statement is correct?

- A. 16 save streams are directed to the tape drives
- B. 12 save streams are directed to tape drives and 4 save sets are aborted
- C. NetWorker aborts the group because there are not enough sessions available
- D. 12 save streams are directed to tape drives and 4 save sets wait until another save session finishes

Answer: A

Question: 2

Which level of archiving is delivered by an EMC Centera?

- A. Active
- B. Passive
- C. Online
- D. Offline

Answer: A

Question: 3

Over which path does the backup metadata travel in a SAN-based backup?

- A. SAN only
- B. LAN only
- C. Local to storage node
- D. SAN to LAN

Answer: B

Question: 4

A customer has a DL740 in its environment. Active Engine Failover is configured. During the night, one of the engines fails. What is the result?

- A. The WWPNs of the failed engine move to the working one. Active backups are redirected to another engine.
- B. The resources of the failed engine move to the working one. All I/O going to the failed engine are directed to the working one through the CMI.
- C. The WWPNs of the failed engine move to the working one. Active backups to the failed engine fail.
- D. The resources of the failed engine move to the working one. All I/O going to the failed engine are directed to the working one through the write cache.

Answer: C

Question: 5

Which component when added to a CLARiiON CX disk array makes it a CLARiiON Disk Library?

- A. Server with Backup Software
- B. Server with Emulation Software
- C. Another Controller
- D. Tape Library

Answer: B

Question: 6

A customer is running NetWorker 7.3. All Cloned save sets are written to one backup Clone pool. What is the effect of setting a retention policy for that backup Clone pool?

- A. All Clone instances of a save set will have the same pool retention time
- B. Each Clone instance of a save set will have a different Clone retention time
- C. All Clone instances of a save set will have the same Clone retention time
- D. All Clone instances expire when the save set expires

Answer: B

Question: 7

Which characteristic best describes CLARiiON Disk Library?

- A. Low cost of deployment, no changes required
- B. Integrates into an existing storage-management
- C. Offloads processing from the backup server
- D. Uses high-performance SAN channels

Answer: A

Question: 8

How does a Recovery Time Objective requirement impact the design of a backup solution?

- A. The amount of backup storage
- B. The type of backup storage
- C. The number of backup software modules
- D. The type of schedules

Answer: B

Question: 9

You are designing a backup solution for the following environment:

- 1 Solaris Backup Server
- 5 MAC clients
- 10 Linux clients
- 20 UNIX clients
- 5 Open VMS clients
- 40 Windows clients
- 2 CLARiiON CX 700s with ATA disk (for Backup Data)
- 1 DMX 1000 (primary data)

Which backup software do you use?

- A. CA BrightStor Arcserve 7.0
- B. NetWorker 7.3
- C. Veritas BackupExec 6.0
- D. Commvault Galaxy 3.0

Answer: B

Question: 10

What is NetWorker dynamic drive sharing?

- A. Multiple storage nodes accessing a tape drive at the same time in a non-SAN environment
- B. Multiple storage nodes accessing a tape drive one-at-a time in a non-SAN environment
- C. Multiple storage nodes accessing a tape drive one-at-a-time in a SAN environment
- D. Multiple storage nodes accessing a tape drive at the same time in a SAN environment

Answer: C

Question: 11

What is a disadvantage to having multiple storage nodes?

- A. Creates multiple points of administration
- B. Requires managing multiple catalogs
- C. Increases cost
- D. Increases LAN traffic

Answer: C

Question: 12

Your Windows NetWorker server is destroyed as a result of severe storm damage. What is the first step in recovering the NetWorker server after replacing the hardware?

- A. Recover the primary system drive
- B. Install the operating system software
- C. Recover the contents of the bootstrap save set
- D. eRecover the SYSTEM or VSS SYSTEM save sets

Answer: B

Question: 13

You are designing a new backup solution for a customer. After an initial analysis, you decide to implement a two tier solution. The first tier is disk and the second is tape. A retention period needs to be defined for the first tier which will determine when backup data will be moved to the second tier. What determines this retention period?

- A. Percentage of restore requests over time
- B. Recovery point objective
- C. Backup type
- D. Available bandwidth

Answer: A

Question: 14

You are designing a Replication Manager architecture for 25 hosts. In order to support backup and recovery operations you will use 50 Clone LUNs . How do you ensure that Replication Manager assigns the correct LUNs to each production host?

- A. Assign the all of the Clone LUNs to one storage group and configure the activity to use that specific group
- B. Assign the all of the Clone LUNs to per-job storage pools and then configure each activity to use a specific pool
- C. Assign both the production and Clone LUNs into their own storage group

SAMPLE EXAM

Pass4sure \$89 Lifetime Membership Features;

- Pass4sure \$89 Lifetime Membership includes Over **2100** Exams in One Price.
- **All** Pass4sure **Questions and Answers** are included in \$89 package.
- **All** Pass4sure audio exams are included **free** in \$89 package (See List).
- **All** Pass4sure study guides are included **free** in \$89 package (See List).
- **Lifetime** login access, no hidden fee, no login expiry.
- **Free updates** for Lifetime.
- **Free Download Access** to All new exams added in future.
- Accurate answers with **explanations** (If applicable).
- **Verified answers** researched by industry experts.
- Study Material **updated** on regular basis.
- Questions, Answers and Study Guides are downloadable in **PDF** format.
- Audio Exams are downloadable in **MP3** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support **24x7**.
