QUESTION 3
LCC Company bought a DRP solution based on MirrorView Asynchronous with two CX700s. After you designed the DRP solution between Madrid and Geneva, LCC wants to know: What is the procedure to follow if the usable space in the LUN reserved for Gold Copy becomes full during an MV/A update?

A. The MirrorView/A session will transition into a system-fracture state. The point-in-time view of the secondary mirror LUN in the form of a Gold Copy is not maintained. User intervention is required to allocate more storage to the reserved LUN pool and start the update operation.
B. The MirrorView/A session will transition into an admin-fracture state. The point-in-time view of the secondary mirror LUN in the form of a Gold Copy is maintained. User intervention is not required to allocate more storage to the reserved LUN pool. Flare code will start the update operation.
C. The MirrorView/A session will transition into an admin-fracture state. The point-in-time view of the secondary mirror LUN in the form of a Gold Copy is maintained. User intervention is required to allocate more storage to the reserved LUN pool and start the update operation.
D. The MirrorView/A session will transition into an admin-fracture state. The point-in-time view of the secondary mirror LUN in the form of a Gold Copy is not maintained. User intervention is required to allocate more storage to the reserved LUN pool, recreate snapshots for Gold Copy, and start the update operation.

Copy the LUNs which are spread over the fourth DAE to the new LUNs with SnapView Clone
Modify the LUN configuration in the Storage Groups
Disconnect the fourth DAE and reallocate it to New Jersey
B. Discover all of the LUNs from the Storage Groups which are spread across the fourth DAE in New York and delete them
Disconnect the fourth DAE and reallocate it to New Jersey

Create new LUNs of equal size in the first three DAEs
