**Question: 3**

A securities company has 4000 users split between Paris, Zurich, and London. Each site has two Domino servers and a connection to the internet for incoming and outgoing email. The connections between the sites are highly-speed and utilization is moderate. What should you do to ensure that all communications are forwarded to the Emailxtender server?

- A. You install Emailxtender in Paris and use EmailXtract to gather all email from all Domain servers at night when traffic slows down.
- B. You install a central EmailXtender server in Paris, Install the EmailEtender Domino installer on all Domino servers, and configure EmailXtender to pull from all mail servers.
- C. You install a central EmailXtender server in Paris, install the listener only on the Paris servers. You create a task in EmailXtract to pull all email from London and Zurich at night when traffic slows down.
- D. You install an EmailXtender server at each site. Since each site has its own connection to the internet, this configuration will be required to assure that incoming, outgoing, and site specific email will be captured.
