Foundry

FNC4-7E Foundry Networks Certified Layer 4-7 Engineer

Thousands of IT Professionals before you have already passed their FN0-202 certification exams using the Foundry FN0-202 Practice Exam from ipass4sure.com. Once you start using our FN0-202 exam questions you simply can't stop! You are guaranteed to pass your Foundry FN0-202 test with ease and in your first attempt.

Here's what you can expect from the [ipass4sure](http://ipass4sure.com) Foundry FN0-202 course:

- * Up-to-Date Foundry FN0-202 questions designed to familiarize you with the real exam.
- * 100% correct Foundry FN0-202 answers you simply can't find in other FN0-202 courses.
- * All of our tests are easy to download. Your file will be saved as a FN0-202 PDF.
- * Foundry FN0-202 brain dump free content featuring the real FN0-202 test questions.

Foundry FN0-202 Certification Exam is of core importance both in your Professional life and Foundry Certification Path. With Foundry Certification you can get a good job easily in the market and get on your path for success. Professionals who passed Foundry FN0-202 Certification Exam are an absolute favorite in the industry. If you pass Foundry FN0-202 Certification Exam then career opportunities are open for you.

Our FN0-202 Questions & Answers provide you an easy solution to your Foundry FN0-202 Exam Preparation. Our FN0-202 Q&As contains the most updated Foundry FN0-202 real tests. You can use our FN0-202 Q&As on any PC with most versions of Acrobat Reader and prepare the exam easily.

QUESTION: 1

Which of the following are valid source addresses the ServerIron can use to perform its health checks?

- A. The ServerIron Management IP address
- B. The Real Server Ip address
- C. Server Source IP defined on the ServerIron
- D. The default gateway

Answer: A, C

QUESTION: 2

Which of the following best describes Direct Server Return (DSR)?

- A. Client bypasses the SLB device and talks directly to the servers.
- B. Client sends traffic to SLB device and SLB device responds with HTTP re-direct.
- C. Server bypasses the SLB device and sends replies directly to the client.
- D. Server replicates data onto other servers closer to the client.

Answer: C

QUESTION: 3

Using show server real, if you see SUSPECT under an application port

- A. There is no link to the server
- B. The application might not be available
- C. The time between packets has increased
- D. The server is reachable at Layer 3 but the application failed Layer 4 or 7 health checks

Answer: C

QUESTION: 4

Using show server real, if you see UNBND:

- A. The application cannot be found
- B. The application is bound to the VIP
- C. The VIP is bound to the real server
- D. The application needs to be bound to the real server
- E. The application port for the real server is not bound to the real server

Answer: C

QUESTION: 5

1. The ServerIron sends a TCP SYN packet to the server,
2. The SI waits one second and then checks for a SYN ACK reply from the server.
3. If the SYN ACK is received, then the ServerIron completes the test by sending TCP RESET to the server.

Describes what kind of Health Checks

- A. Layer 4 UDP Three-way health check
- B. Layer 3 TCP Three-way health check
- C. Layer 4 TCP Three-way health check
- D. Layer 3 UDP Three-way health check

Answer: C

QUESTION: 6

To access a remote server, configure:

- A. Server source-nat
- B. Source-nat in the same subnet as the ServerIron Management IP
- C. Server source-ip and source-nat in the same subnet as the ServerIron Management IP
- D. Server source-ip for the remotes subnet

Answer: C

QUESTION: 7

If the real servers are directly connected to the ServerIron, the ServerIron replaces the:

- A. Source IP address with the real servers address
- B. Destination IP address with the real servers address
- C. Source address with the ServerIrons server source-ip address
- D. Source and destination addresses with the ServerIrons server source-ip and the real servers IP addresses.

Answer: B

QUESTION: 8

What is the default SLB behavior for Server Load Balancing for packets from the

ServerIron to the real server?

Choices:

- 1)Packets from the ServerIron to the real server
 - a.Destination translates address from the VIP to the real serverIP
 - b.Source translate the clients IP address
- 2)Packets from the ServerIron to the real server
 - a.Destination translates address from the VIP to the real server IP
 - b.Source leaves the clients IP address unchanged
- 3)Packets from the ServerIron to the real server
 - a.Destination leave the clients IP address unchanged
 - b.Source Translate the real server IP address into a VIP address
- 4)Packets from the ServerIron to the real server
 - a.Destination Leave the real server IP address unchanged
 - b.Source leaves the clients IP address unchanged

- A. 1
- B. 2
- C. 3
- D. 4

Answer: B

QUESTION: 9

What ServerIron functionality allows a client to connect to the same server to which it previously established an SSL connection? (Select all that apply)

- A. sticky
- B. SSL session ID switching
- C. cookie switching
- D. HTTP header hashing

Answer: A, B

QUESTION: 10

The Foundry ServerIron uses predictors to determine how to load balance the traffic flow. Which of the following is not a valid predictor?

- A. Least Connections
- B. Round Robin
- C. Least port priority
- D. Response Time/Least Connections

Answer: C

QUESTION: 11

What best describes the role that the Virtual IP (VIP) Address plays in SLB?

- A. The Virtual IP maps multiple logical addresses to one physical port number,
- B. The Virtual IP address maps one logical address to multiple physical servers
- C. The Virtual IP responds to ARPs with the real servers IP address
- D. The Virtual IP maps ARPs with the real servers IP cache table.

Answer: B

QUESTION: 12

What is the well-known name for port 80?

- A. HTTP
- B. POP3
- C. IMAP4
- D. FTP

Answer: A

QUESTION: 13

Performing Health Check on remote servers requires a source IP address that is not related to std NAT.

- A. True
- B. False

Answer: A

QUESTION: 14

Which Foundry SLB predictor uses a percentage distribution?

- A. round robin
- B. weighted
- C. least connections
- D. delay
