B. To create a type A5 event record when a job completes JES2 purge processing
C. To create a type A3P event record when a job completes JES2 output processing
D. To create a type A1 event record when a job completes JES2 conversion processing
E. To create an SYY event record when a dataset defined as a dataset trigger is created.
F. To create a type A4 event record when a JES2 JOE (Job Output Element) completes PRINT
processing

Answer: B, C, D

Question: 2
Which statement is true about TWSz E2E jobs having predecessors on the mainframe or using
special resources?

A. All predecessors of FTA operations must be on non-reporting workstations to avoid loss of
fault tolerance.
B. This results in a loss of Fault Tolerance, because the FTA must be in communication with the
mainframe to resolve these dependencies.
C. This is not possible because once the plan is sent to the FTA from the mainframe there is no
further communication between them until a new plan is sent.
D. Special resources can be used for E2E jobs only if they represent a file defined in the home
directory of the FTA on which the job is scheduled.

Answer: B

Question: 3

C. Files smaller than 10 megabytes, otherwise they cannot be transmitted.
D. Any tape or disk files as long as all the necessary TWS files are copied

A job which executed before the CP EXTEND job failed to track correctly. Which statement is true about how EQQAUDIT should be set up to determine the cause of the tracking problem?

A. EQQAUDIT must be run with SYSIN option JTX.
B. EQQAUDIT must be run with the TRL (tracklog) SYSIN option.
C. EQQAUDIT may be run with the JTX option as long as the "start time" coded is before the time that the CP EXTEND job was run.
D. Since CP EXTEND has executed, option 10.1 (interactive Audit/Debug cannot be used so option 10.2 (AUDIT BATCH) must be used instead.

Answer: B

Question: 10
What are two special considerations when backing up the EQQADDS? (Choose two.)

A. The EQQADDS is heavily LSR buffered, so it cannot be backed up while the TWSz controller is running.

B. The EQQADDS is a SPANNED VSAM KSDS dataset, and cannot be backed up to a sequential dataset (such as tape) via REPRO.
C. The EQQADDS must be maintained in synchronization with the LTP and CP. A backup should be taken any time significant changes are made to any TWSz applications.
D. The TWSz controller automatically backs up the EQQADDS to the EQQADBKP dataset whenever the CP is backed up. Therefore, it is not necessary to ever do an EXTERNAL (outside of TWSZ controller processing) of this dataset.
E. The EQQADDS includes both the APPLICATION DESCRIPTION records and the JCL VARIABLE TABLES. If any date-related variables are defined, the dataset must be backed up every morning at one minute after midnight.
